Metalloma

Ogni specie è caratterizzata da uno specifico

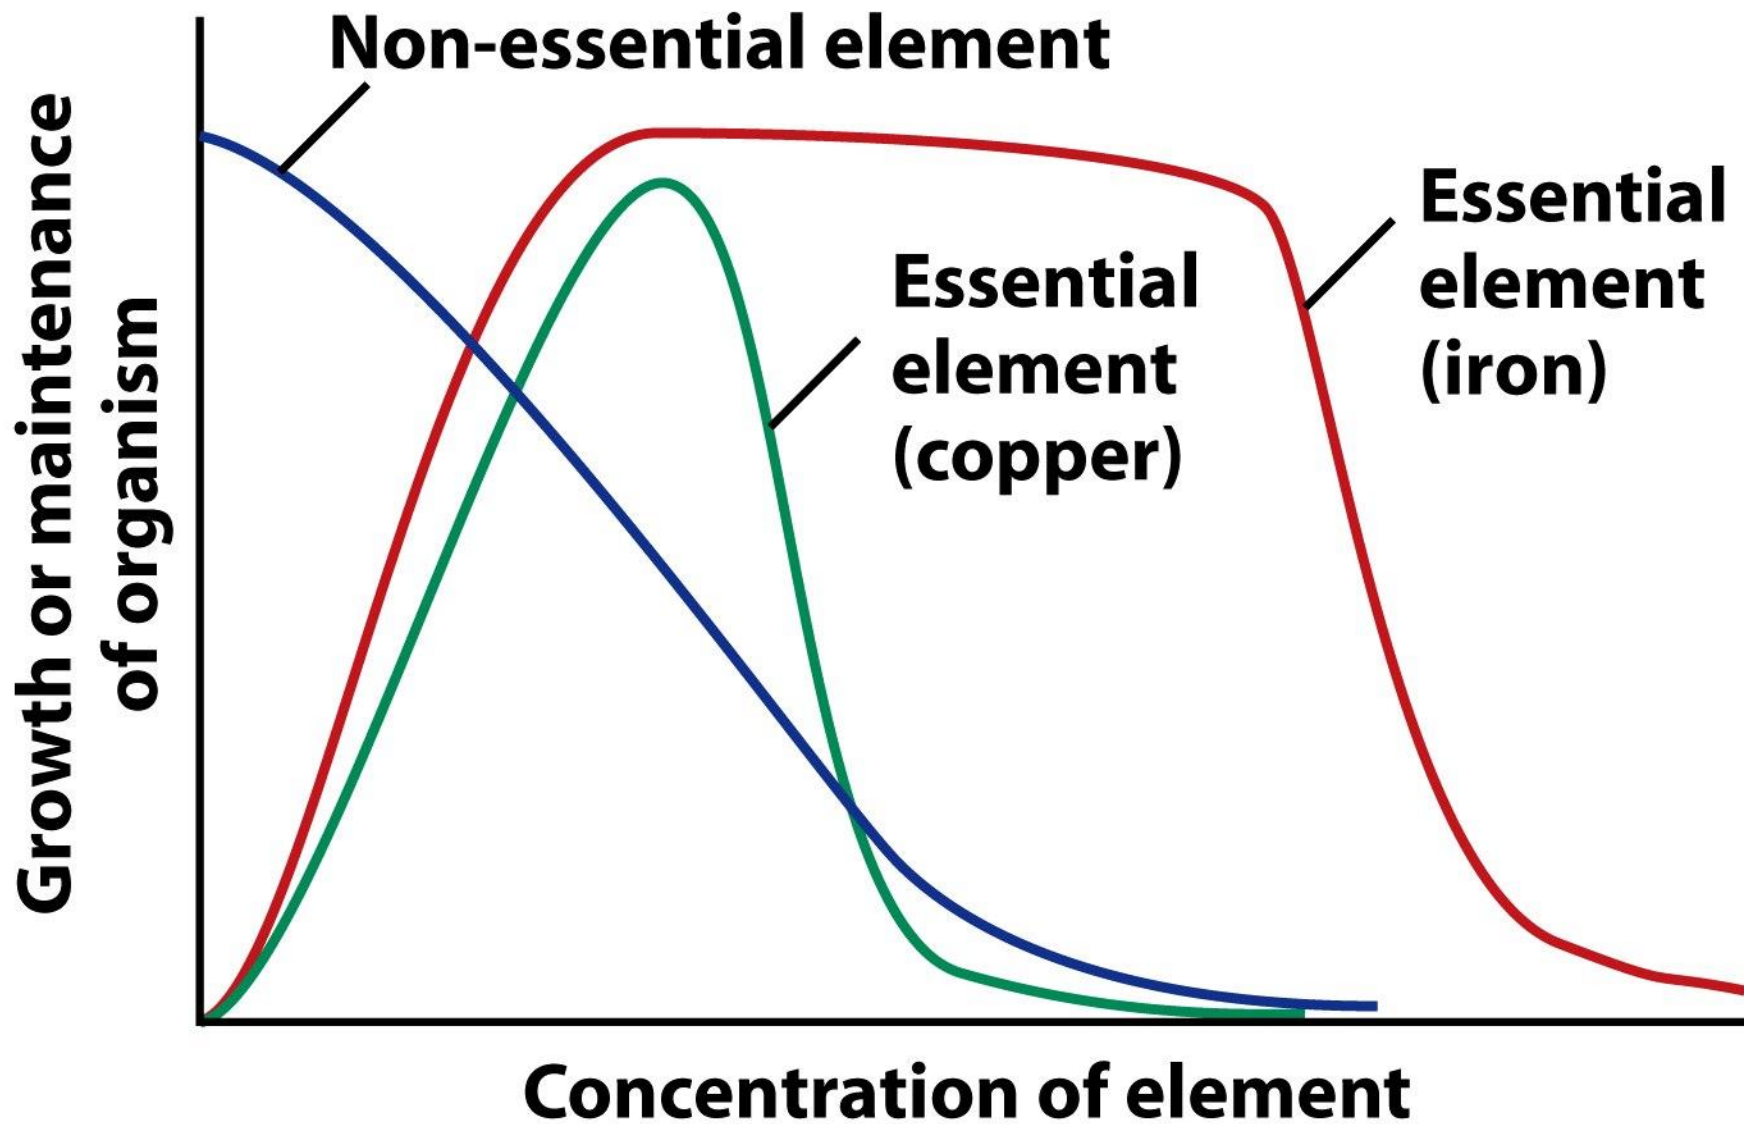

metalloma

definito come l'insieme di metalli contenuto in ogni tipo di cellula di quella specie, ognuno con la sua specifica **quantità, speciazione e localizzazione** all'interno di ogni cellula

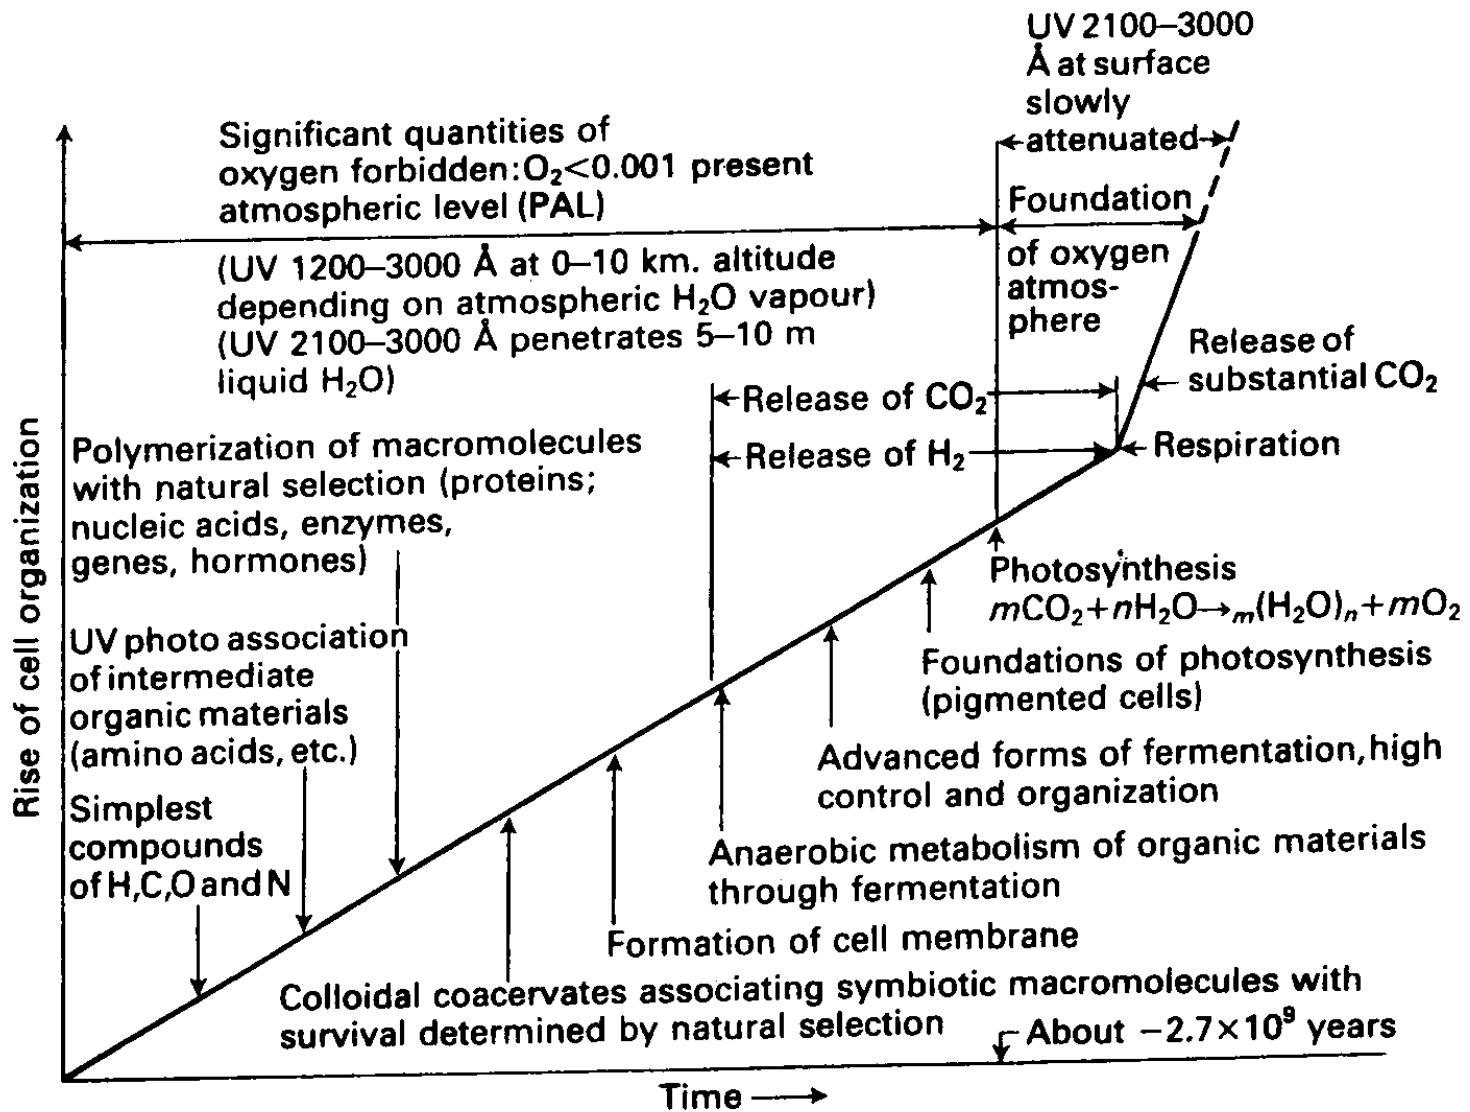

Come si stabilisce se un elemento è essenziale per una specie?

Si definisce **essenziale** un elemento sistematicamente presente in una certa specie biologica e tale che la sua assenza (o carenza) nelle fonti nutritive di quella specie sia causa di malattie, disturbi metabolici o dello sviluppo

Biodisponibilità degli elementi

Potenziali redox accessibili in acqua a pH 7: fra -0.4 V (H^+/H_2) e $+0.8$ V (O_2/OH^-)
