THE INCREASING SCIENTIFIC KNOWLEDGE

Increased number of scientific papers published

New journals

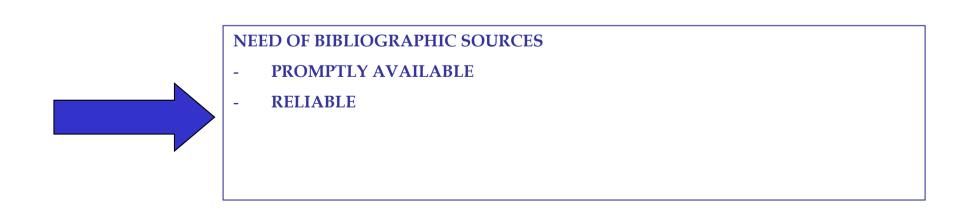

BIBLIOGRAPHIC RESEARCH

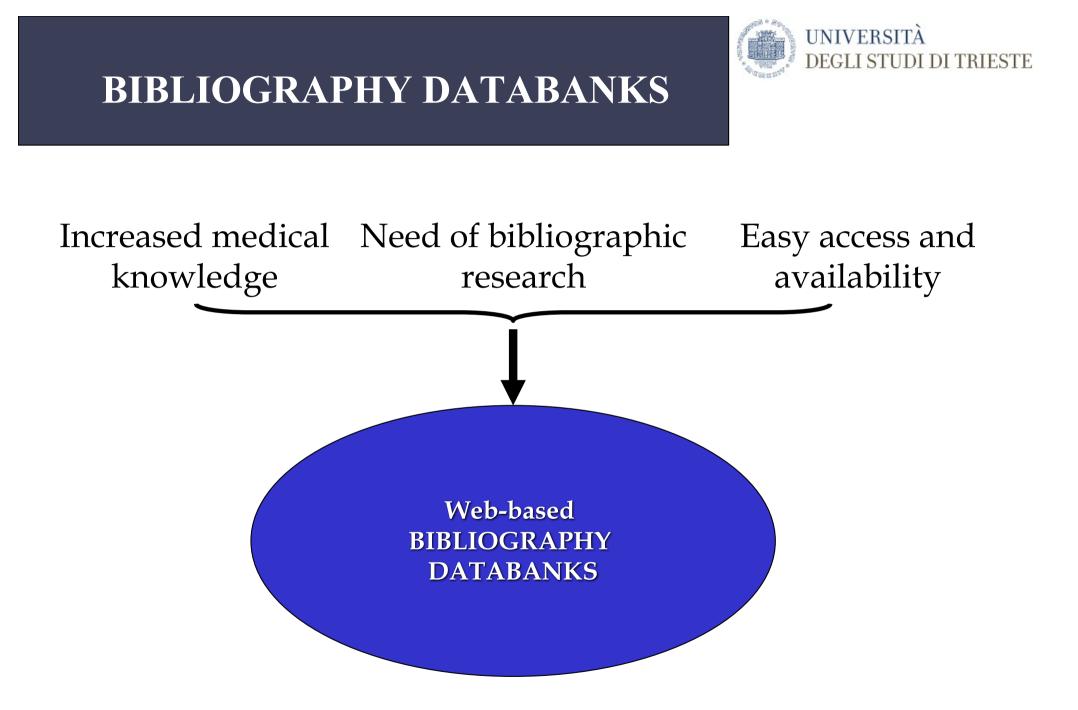

The bibliographic research is essential to:

• **Start the research** (state-of-the-art evaluation/review)

• Create new answers to specific needs according to the available literature (new applications based on previous knowledge)

EXAMPLES

BANCHE DI BIBLIO	GRAFIA IN BIOME	DICINA			
Nome	Aree coperte	Copertura temporale	Fonti considerate	Frequenza di aggiornamento	Accesso

INFORMATION QUALITY

- It is easy to implement references databanks using available ICTs and web technologies
- Bibliography databanks refer only to quality information
- •Scientific papers to be published need to be:
 - ✓ Peer-reviewed to obtain the comments from expert colleagues
 - ✓ If the comments are all positive, the paper is accepted
 - ✓ If the comments are negative →
 - ✓ Request for paper revision (major/minor)
 - ✓Reject
 - \checkmark After the revision
 - ✓New review
 - ✓ Direct acceptance / rejection

Comments to Editor:	REVIEWER: Please indicate to the Editor whether any of the following apply, by deleting 'Y' or 'N' as appropriate: * The writing needs substantial improvement - grammar and spelling Y * Improper formatting was used (figures, tables, legends too small) N * The work is too incremental compared to authors' or others' prior work N * The manuscript is for the most part previously published by the authors N		
	* The study is too biological and not quantitative/computational enough N Dear Editor, I read the manuscript and I believe that it worths to let the authors re-revise it. It still have a language problem (I can tell it even though I am not a native Eng and I totally agree with the other reviewer that it still lacks the contextualization and comparison with the other approaches. I don't agree, conversely, on the fa novelty. It is anyway a different and simpler way to treat the problem of skin reflection, and it could be useful for the imaging community. I would suggest to let With kind regards, Sara	act that	t lacks

THE DECISION LETTER

22-Feb-2015

Dear Dr. Marceglia:

Manuscript ID ACI-2014-12-RA-0115 entitled "A Standards-Based Architecture Proposal for Integrating Patient mHealth Apps to Electronic Health Record Systems" which you submitted to the Applied Clinical Informatics, has been reviewed. The comments of the reviewer(s) and Associate Editor (if applicable) are included at the bottom of this letter.

The reviewer(s) have recommended publication with Minor Revisions to your manuscript. Therefore, I invite you to respond to the reviewer(s)' comments and revise your manuscript.

The revised manuscript must be UNBLINDED and must contain a section on Human Subject Research Approval and a section on Conflict of Interest.

We encourage you to revise your manuscript within the next 3 weeks to optimize turn-around. Revisions received more than 8 weeks from the date of the decision letter will be considered new submissions, subject to a full round of reviews.

Please log into https://mc.manuscriptcentral.com/aci and enter your Author Center, where you will find your manuscript title listed under "Manuscripts with Decisions." Under "Actions," click on "Create a Revision." Your manuscript number has been appended to denote a revision. You will be unable to make your revisions on the originally submitted version of the manuscript. Instead, revise your manuscript using a word processing program and save it on your computer. Please also highlight the changes to your manuscript within the document by using the track changes mode in MS Word or by using bold or colored text. Once the revised manuscript is prepared, you can upload it and submit it through your Author Center.

When submitting your revised manuscript, you will be able to respond to the comments made by the reviewer(s) in the space provided. You can use this space to document any changes you make to the original manuscript. In order to expedite the processing of the revised manuscript, please be as specific as possible in your response to the reviewer(s).

While Applied Clinical Informatics focuses on the applied aspects of informatics, we aim to give our readers some methodological background as well. In our experience, Methods of Information in Medicine (<u>http://www.schattauer.de/en/magazine/subject-areas/journals-a-z/methods.html</u>) is useful in providing such theoretical background and we encourage references to this journal where appropriate.

IMPORTANT: Your original files are available to you when you upload your revised manuscript. Please delete any redundant files before completing the submission. Because we are trying to facilitate timely publication of manuscripts submitted to the Applied Clinical Informatics, your revised manuscript should be uploaded as soon as possible. If it is not possible for you to submit your revision in a reasonable amount of time, we may have to consider your paper as a new submission.

Once again, thank you for submitting your manuscript to the Applied Clinical Informatics and I look forward to receiving your revision.

Sincerely,

Dr. Christoph Lehmann Editor in Chief, Applied Clinical Informatics culehmann@gmail.com

Reviewer(s)' Comments to Author:

Reviewer: 1

Comments to the Author In reading this, I had several considerations.

The communication between the mobile application and EHR are encrypted and deidentified, using only a patient ID (which I assume is random). Does the mobile application itself include the patient's name, physician's name, etc.? If someone were to find the mobile device, then easy deduction can allow one to discover the patient's name and medical condition. I know your paper says you do not store health information on the device, but this was left a little unclear to me. Does the application have password or TouchID validation to abate this? Additionally, at what point is the information re-identified, and how is this done? It seems that the logical place would be on the EMR side, but this is not apparent in the paper.

Since no health information is stored on the mobile device, how does this contribute to patient health information tracking? Would these data (which are stored in the multiple repositories, per Figure 2A/B) then be accessible to the mobile platform for longitudinal tracking? As it stands, communication looks to be only one-way in terms of this.

- It is the mostly used databank in medicine
- The article is retrieved as citation (not "full text")

- •40% of the journals are published in the US

🚡 🔻 🔂 🛨 😒 PubMed Overview

MEDLINE

MEDLINE is the NLM's premier bibliographic database that contains references to journal articles in the life sciences with a concentration on biomedicine. A distinctive feature of MEDLINE is that the records are indexed with NLM's <u>Medical Subject Headings</u> (MeSH). The database contains citations from <u>1950 to the present</u>, with some older material. New citations that have been indexed with MeSH terms, publication types, GenBank accession numbers, and other indexing data are available daily (Tuesday through Saturday) and display with the tag [PubMed - indexed for MEDLINE]. See also the <u>MEDLINE/PubMed Resources Guide</u>.

🚡 🔻 🗊 🛨 😒 PubMed Overview

Introduction

PubMed, available via the NCBI Entrez retrieval system, was developed by the <u>National</u> <u>Center for Biotechnology Information (NCBI)</u> at the <u>National Library of Medicine (NLM)</u>, located at the <u>U.S. National Institutes of Health (NIH)</u>. Entrez is the text-based search and retrieval system used at NCBI for services including PubMed, Nucleotide and Protein Sequences, Protein Structures, Complete Genomes, Taxonomy, OMIM, and many others. PubMed provides access to citations from biomedical literature. <u>LinkOut</u> provides access to full-text articles at journal Web sites and other related Web resources. PubMed also provides access and links to the other Entrez molecular biology resources.

United States National Library of Medicine National Institutes of Health Fact Sheet What's the Difference Between MEDLINE[®] and PubMed[®]?

- MEDLINE[®]
- National Library of Medicine[®] (NLM[®]) journal citation database.
- Started in the 1960s, it now provides over 21 million references to biomedical and life sciences journal articles back to 1946.
- MEDLINE includes citations from over 5,600 scholarly journals published around the world.
- Publishers submit journals to an NIH-chartered advisory committee, the Literature Selection Technical Review Committee (LSTRC), which reviews and recommends journals for MEDLINE.
- The MEDLINE database is directly searchable from NLM as a subset of the PubMed[®] database as well as through other numerous search services that license the data.

- Has been available since 1996 (now 23 mln references)
- Include the MEDLINE database plus the following types of citations:
 - In-process citations, which provide records for articles before those records go through quality control and are indexed with MeSH or converted to out-of-scope status.
 - Citations to articles that are out-of-scope from certain MEDLINE journals (general science and general chemistry journals)
 - "Ahead of Print" citations .
 - Citations that precede the date that a journal was selected for MEDLINE indexing and Pre-1966 citations.
 - Citations to some additional life sciences journals that submit full text to PMC[®] (PubMed Central[®]) and receive a qualitative review by NLM.
 - Citations to author manuscripts of articles published by NIH-funded researchers amd Citations for the majority of books available on the NCBI Bookshelf .

PUBMED CENTRAL (PMC)

- Launched in 2000
- Free archive for full-text biomedical and life sciences journal articles.
- Repository for journal literature deposited by participating publishers, as well as for author manuscripts that have been submitted in compliance with the NIH Public Access Policy and similar policies of other research funding agencies.
- Although free access is a requirement for PMC deposit, publishers and individual authors may continue to hold copyright on the material in PMC and publishers can delay the release of their material in PMC for a short period after publication.
- There are reciprocal links between the full text in PMC and corresponding citations in PubMed.

Abstract The field of Mobile health (mHealth), which includes mobile phone applications (apps), is growing rapidly and has the potential to transform healthcare by increasing its guality and efficiency. The present paper focuses particularly on mobile technology for body weight management, including mobile	☆ Add to Favorites
phone apps for weight loss and the available evidence on their effectiveness. Translation of behaviour change theory into weight management	Related citations in PubMed
strategies, including integration in mobile technology is also discussed. Moreover, the paper presents and discusses the myPace platform as a case in point. There is little clinical evidence on the effectiveness of currently available mobile phone apps in enabling behaviour change and improving health-related outcomes, including sustained body weight loss. Moreover, it is unclear to what extent these apps have been developed in collaboration	myPace: an integrative health platform for supporting we [IEEE J Biomed Health Inform. 2]
with health professionals, such as dietitians, and the extent to which apps draw on and operationalise behaviour change techniques has not been explored. Furthermore, presently weight management apps are not built for use as part of dietetic practice, or indeed healthcare more widely, where	Review Smartphone and tablet self managemer [Cochrane Database Syst Rev. 2013]
face-to-face engagement is fundamental for instituting the building blocks for sustained lifestyle change. myPace is an innovative mobile technology for weight management meant to be embedded into and to enhance dietetic practice. Developed out of systematic, iterative stages of engagement	A data encryption solution for mobile health apps in cooperation environ [J Med Internet Res. 2013]
with dietitians and consumers, it is uniquely designed to complement and support the trusted health practitioner-patient relationship. Future mHealth technology would benefit if engagement with health professionals and/or targeted patient groups, and behaviour change theory stood as the basis for technology development. Particularly, integrating technology into routine health care practice, rather than replacing one with the other, could be the	Digital technology ownership, usage, and factors predicting downloa [JMIR Mhealth Uhealth. 2014]
