

peptidasi, lactamasi, collagenasi

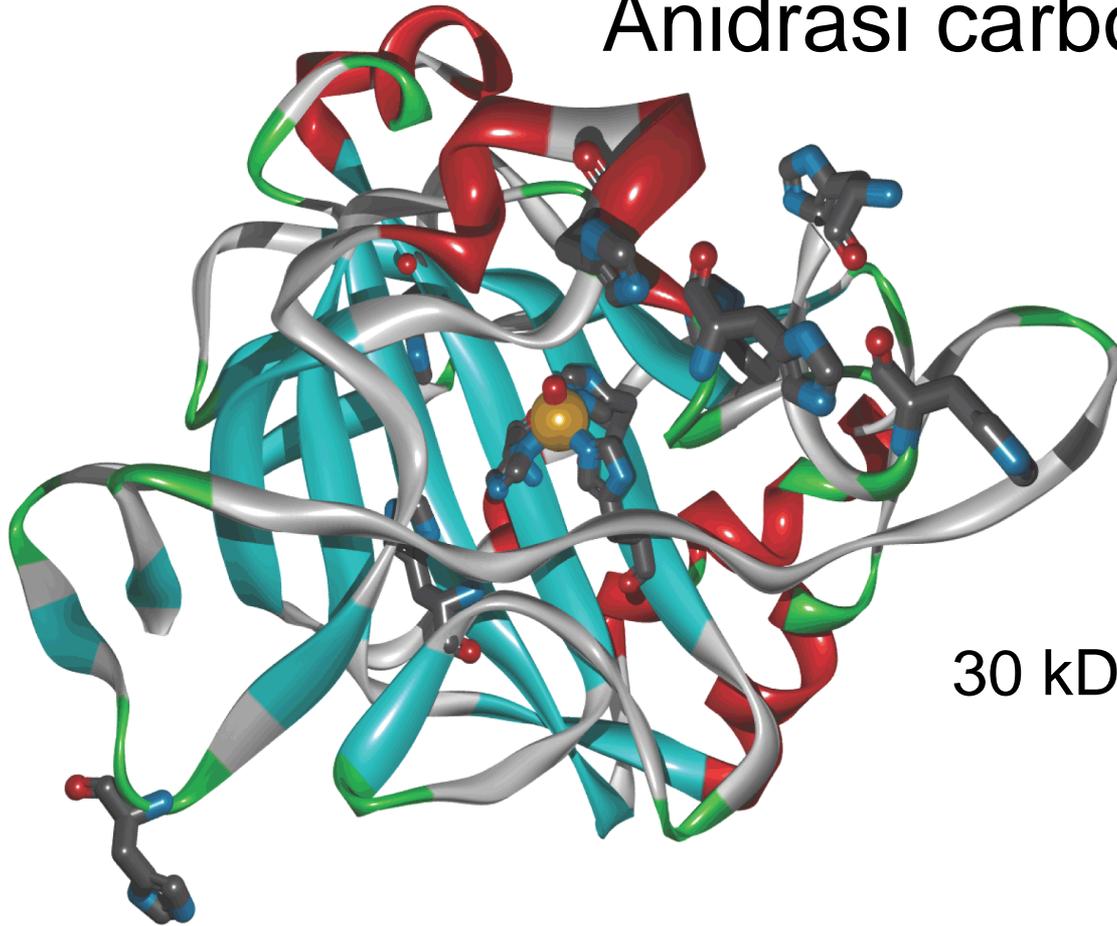

esterasi

fosfatasi, nucleasi

Anidrase carbonica

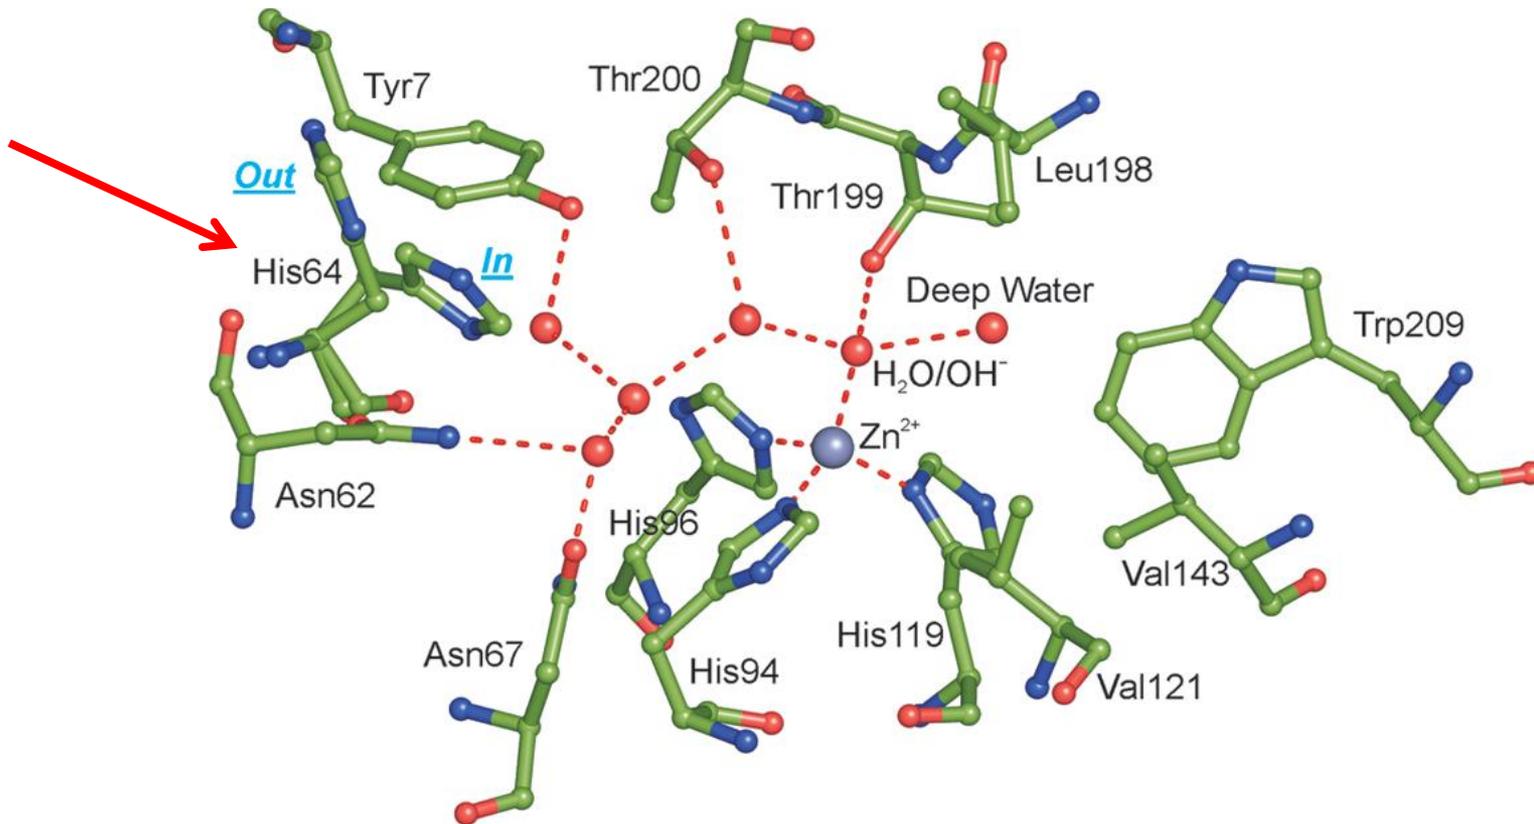

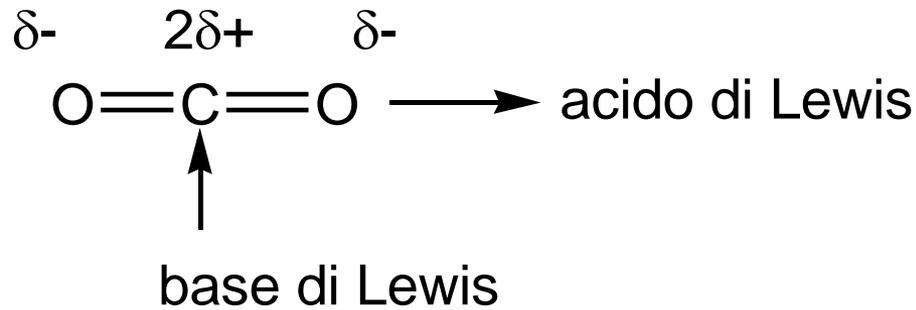

30 kDa, 259 a.a.

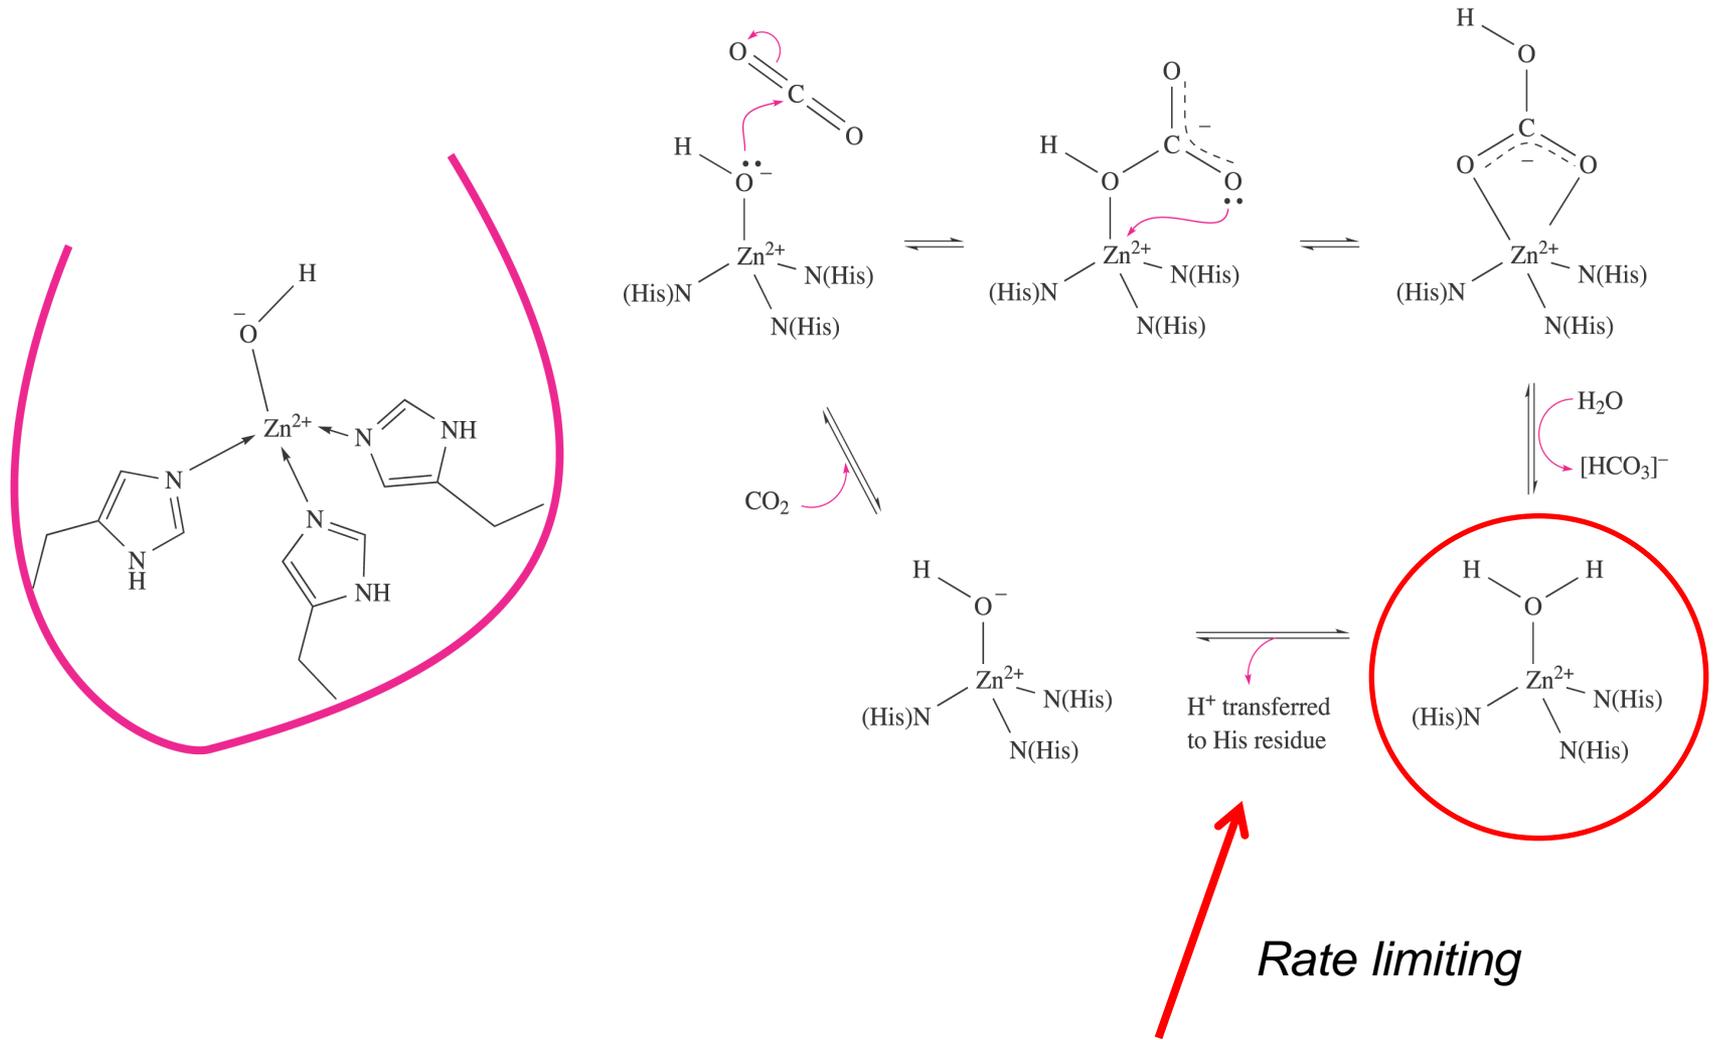

$$k \approx 10^{-1} \text{ s}^{-1} \rightarrow 10^6 \text{ s}^{-1}$$

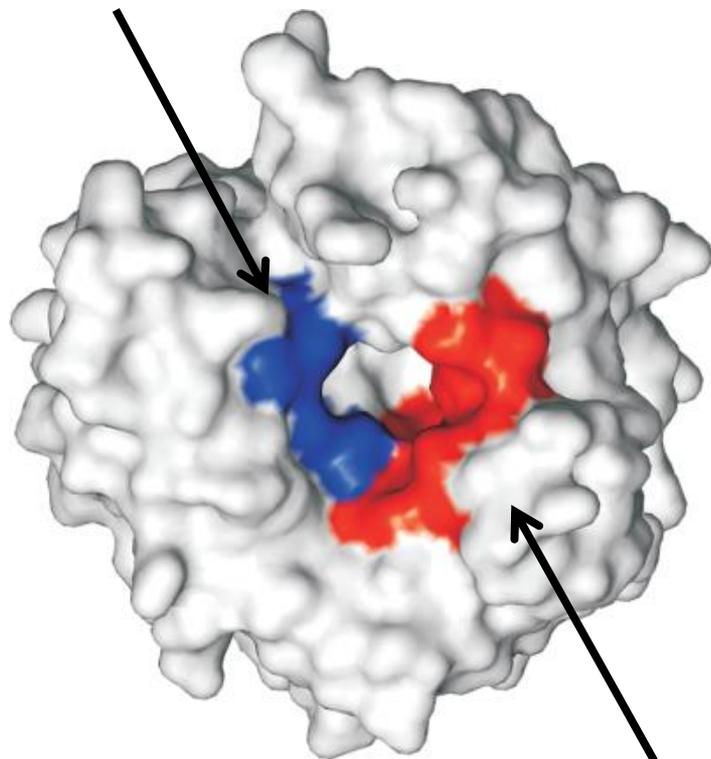

Sito catalitico della anidraasi carbonica

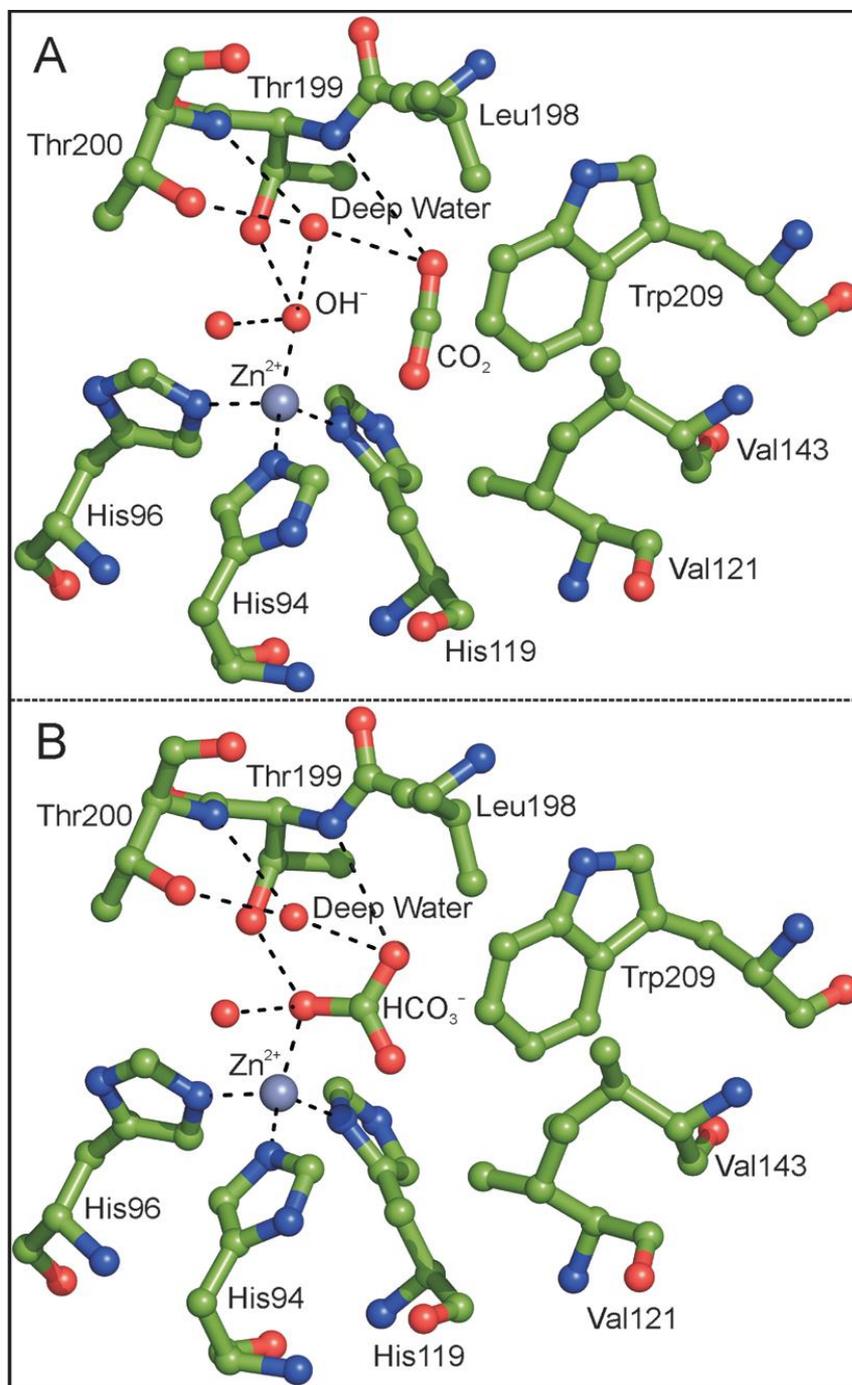

Ciclo catalitico della anidraasi carbonica

Regione idrofilica

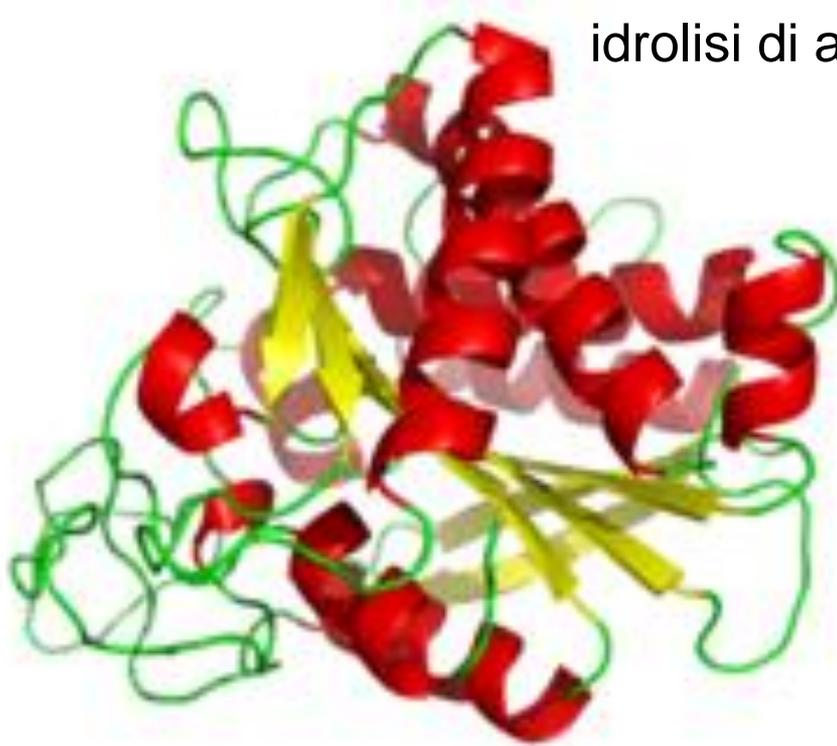

Regione idrofobica

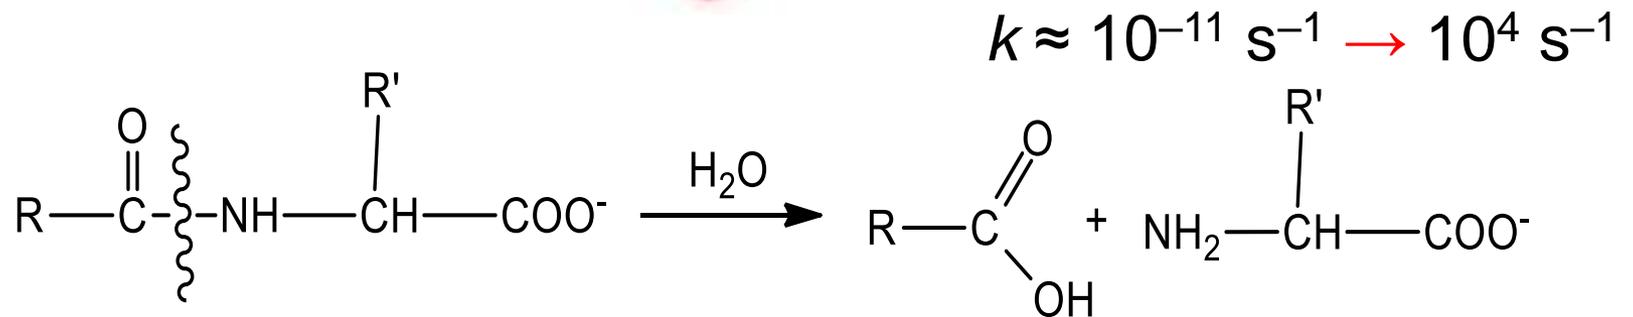

Carbossipeptidasi A (CPD A)

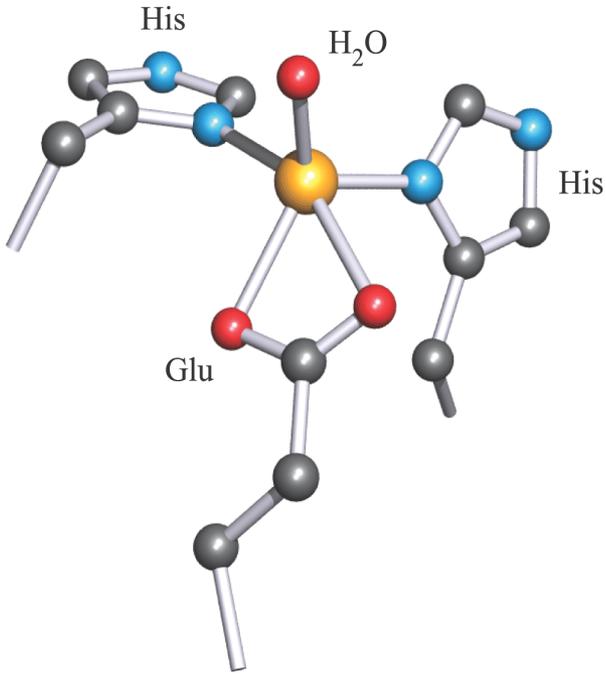

idrolisi di amminoacidi C-terminali

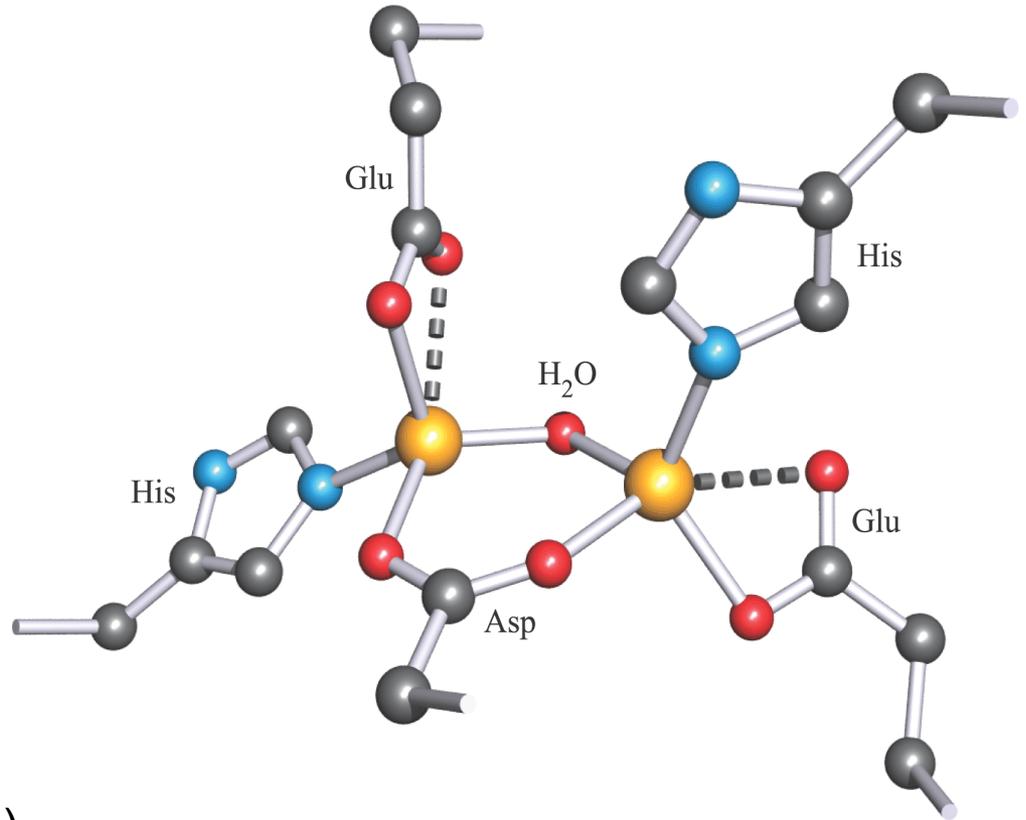

34 kDa, 300 a.a.

Siti attivi di carbossipeptidasi

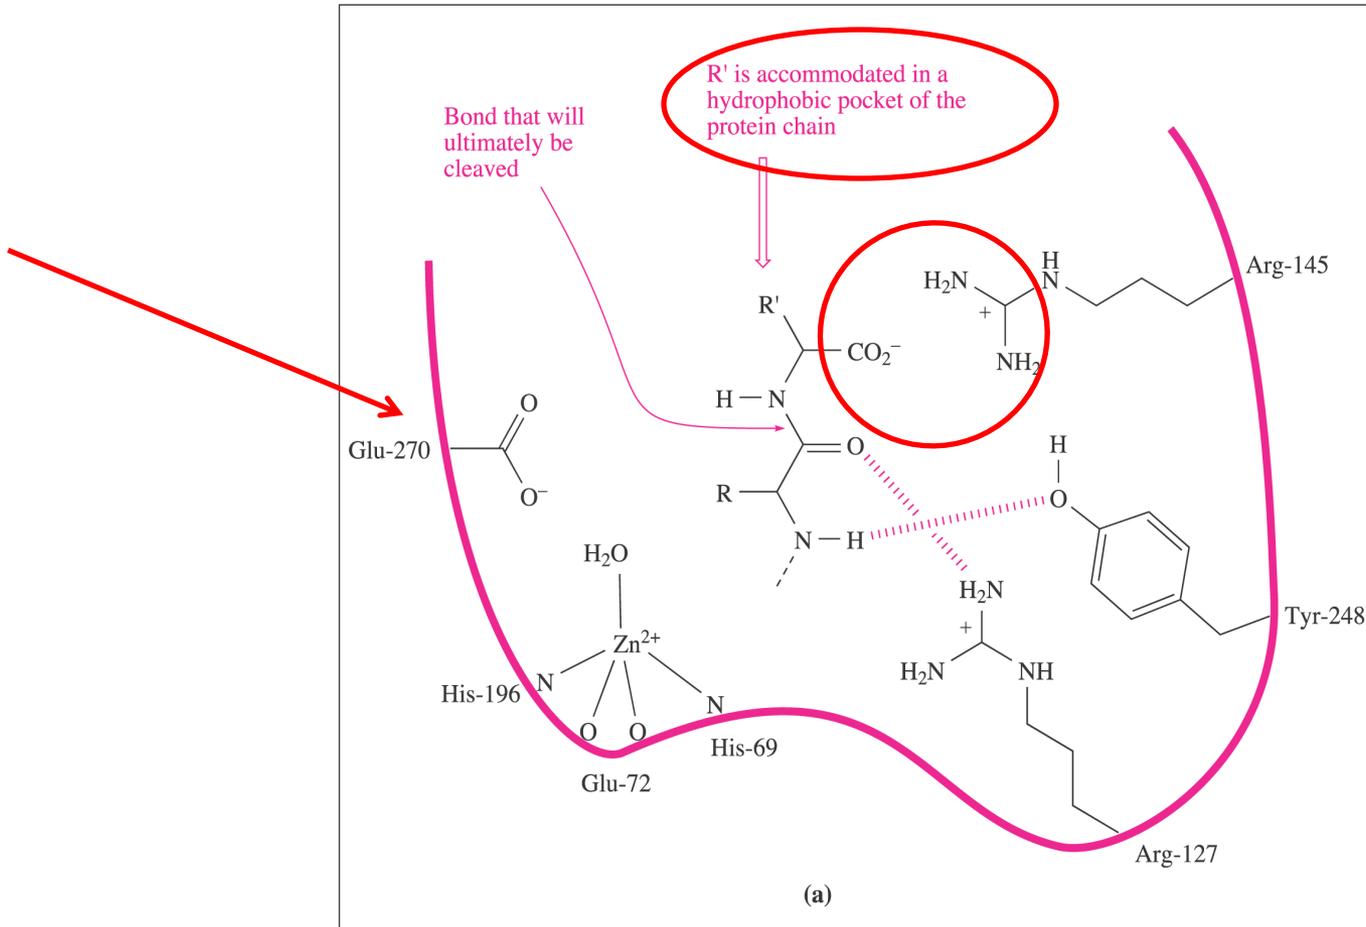

Carbossipeptidasi A (CPD A, bovino)

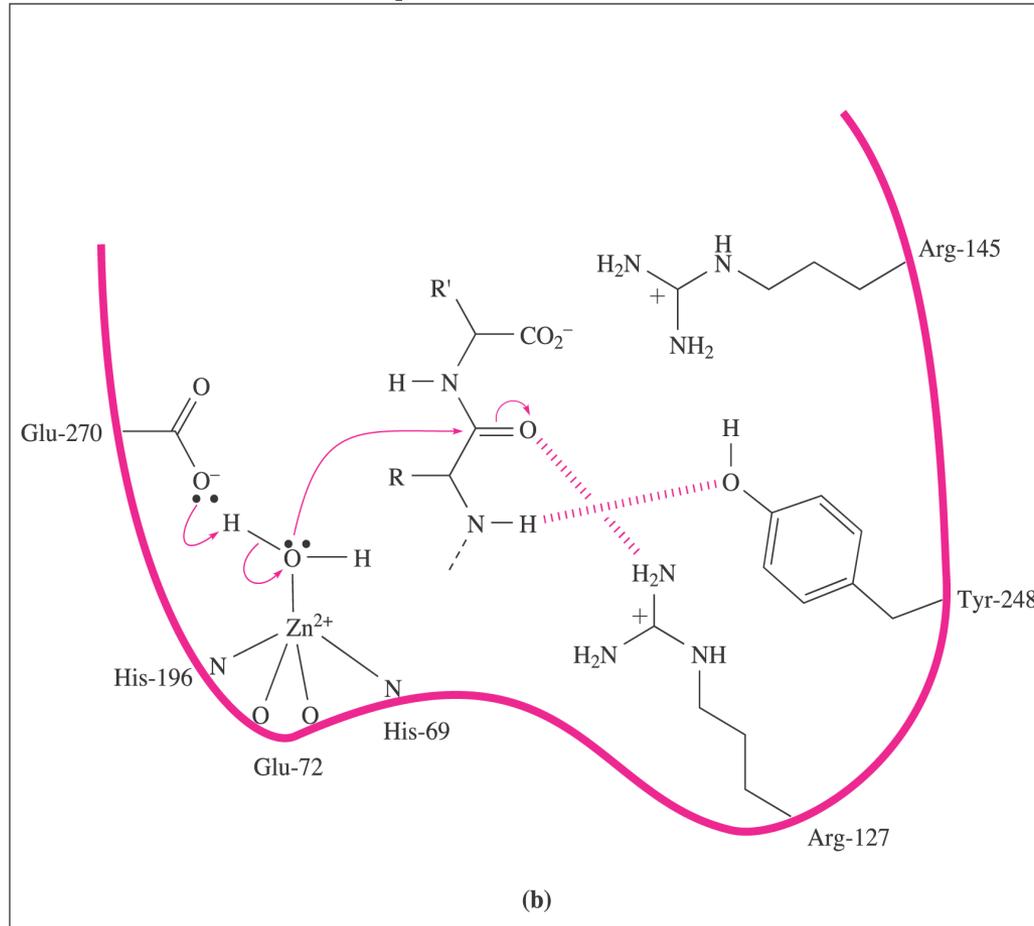

Carbossipeptidasi G2 (CPG2, batterio)

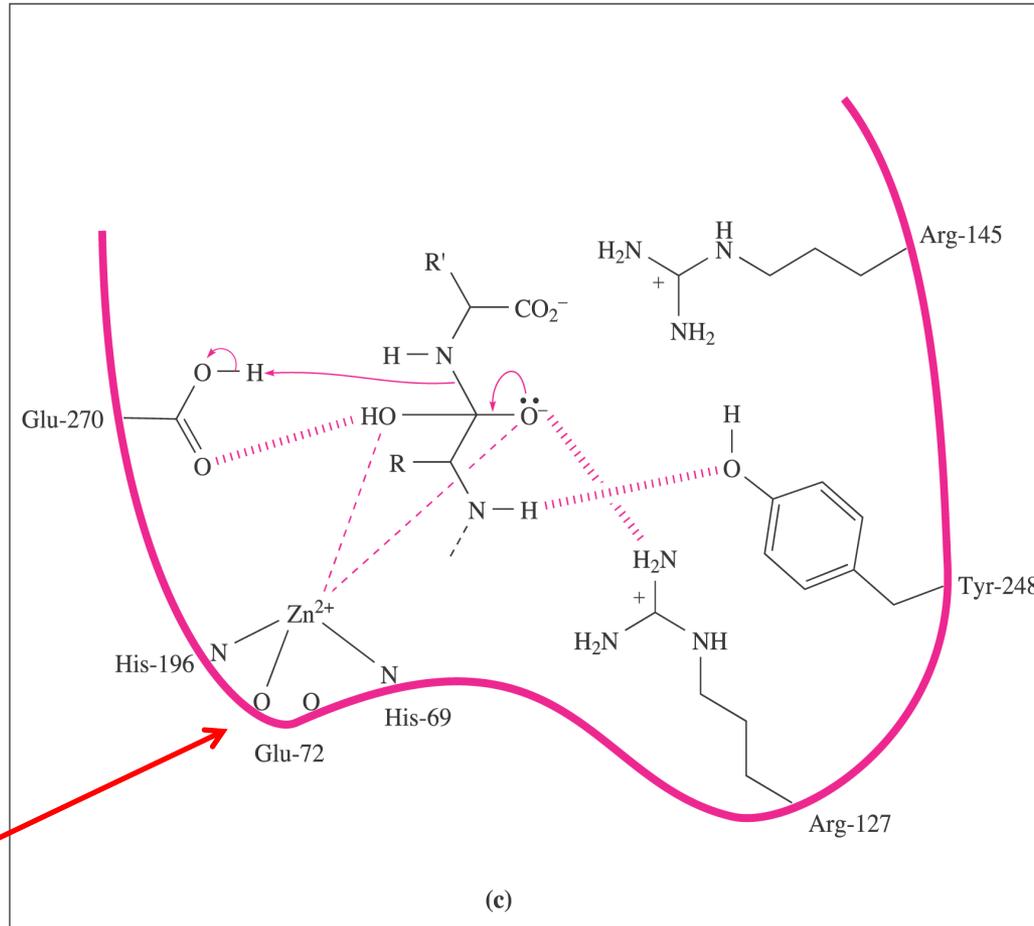

Posizionamento del substrato vicino al sito attivo della CPA

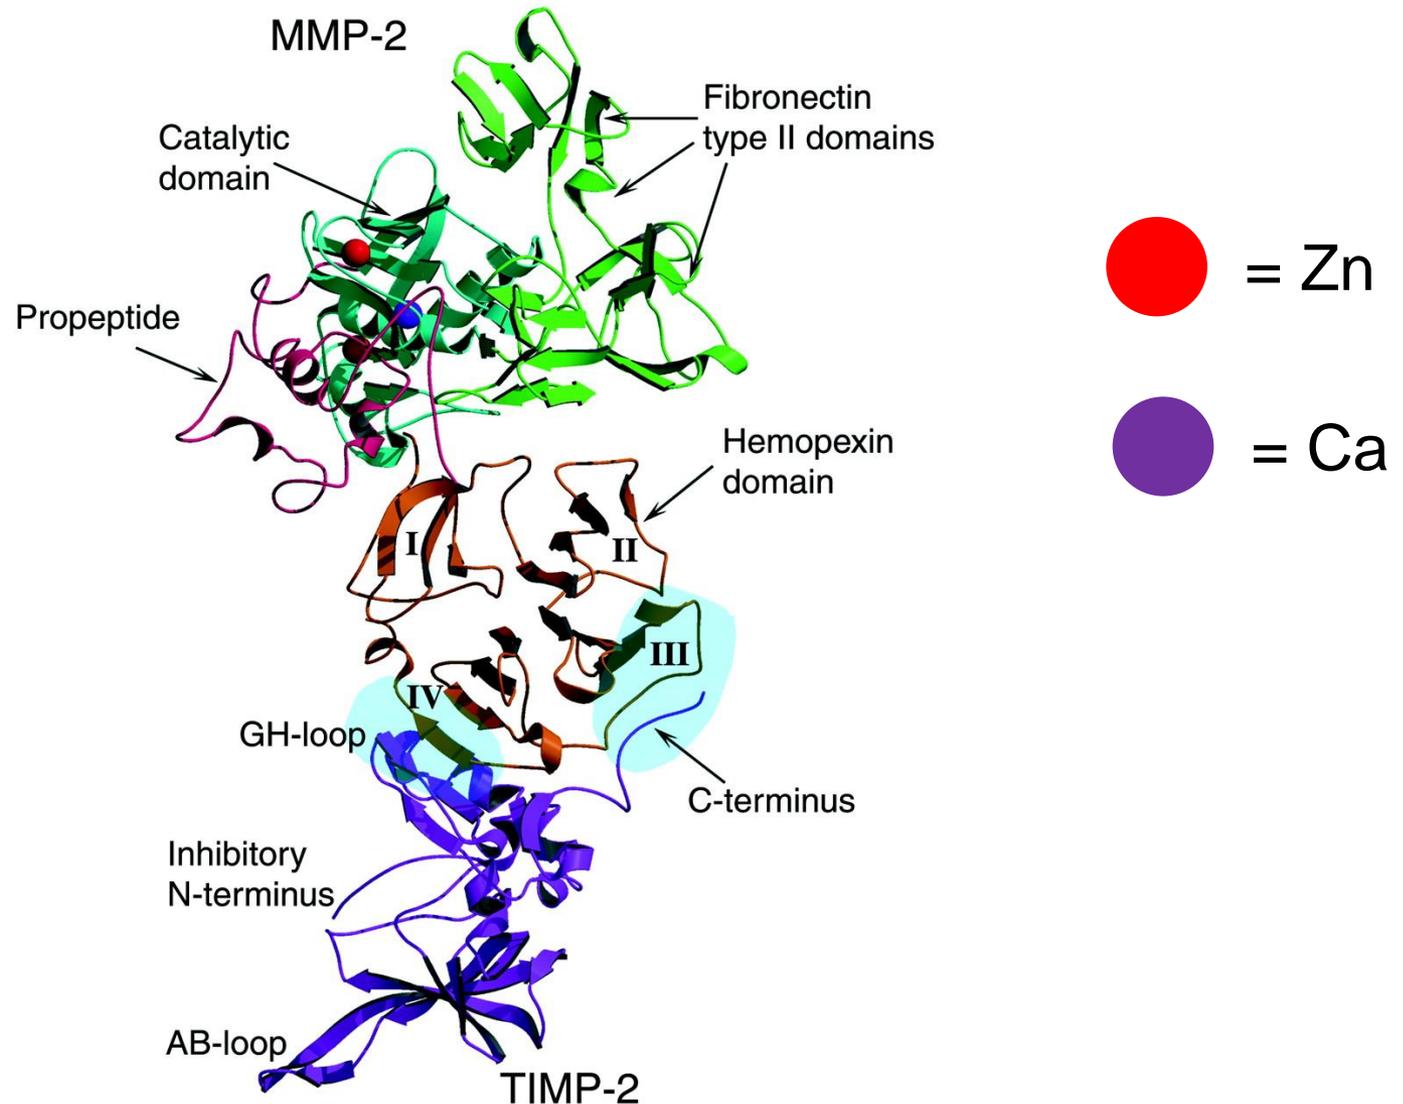

Attivazione dell'acqua e suo attacco nucleofilo

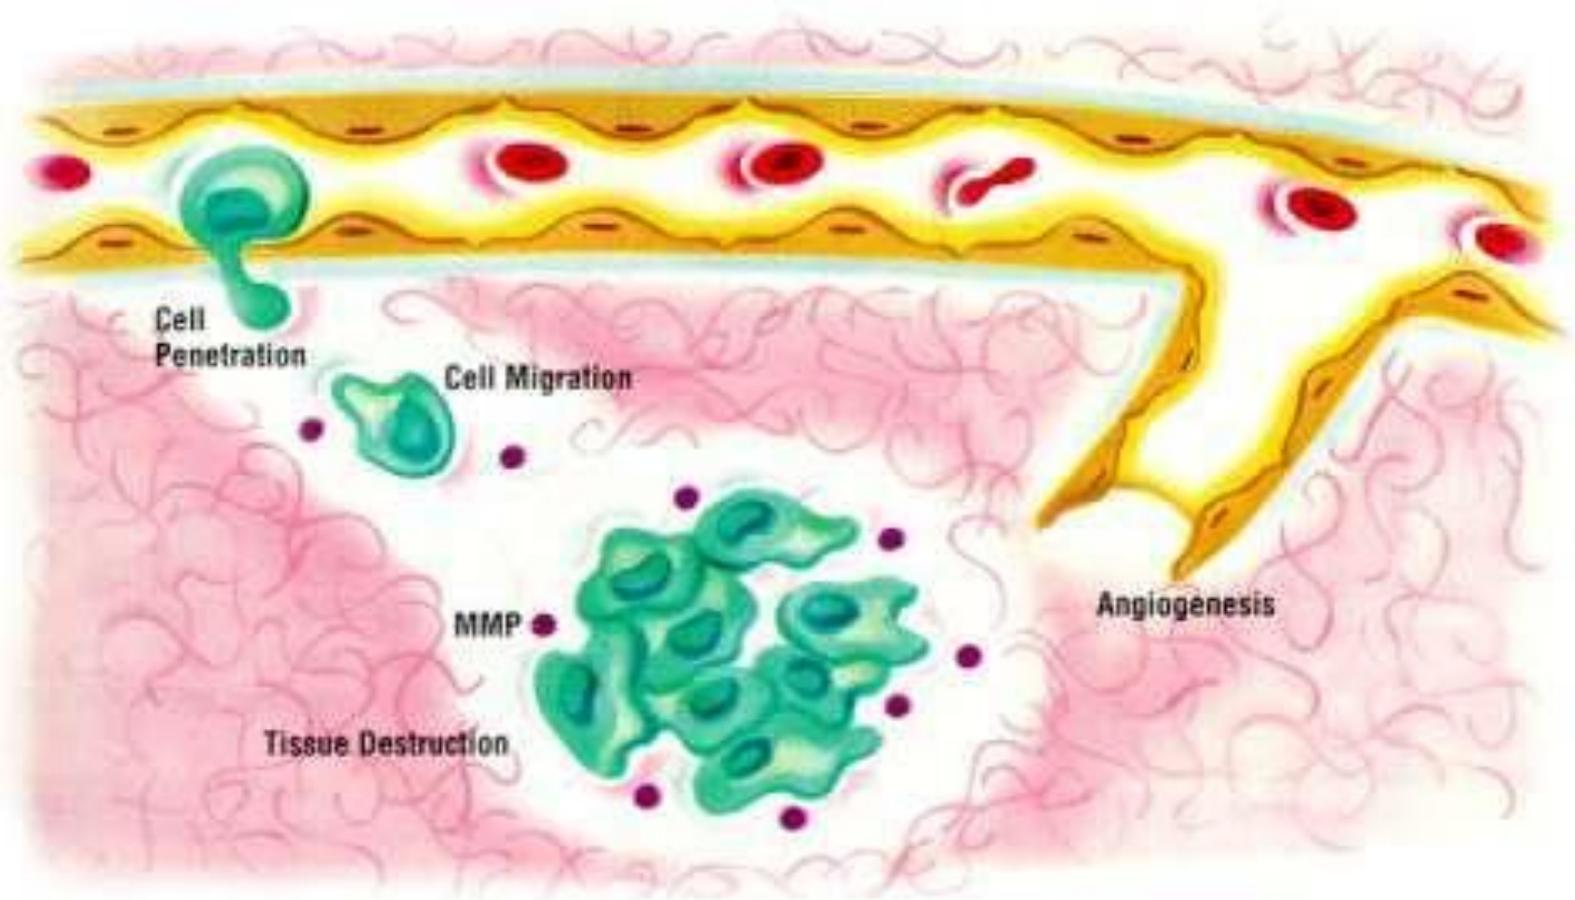

Rottura del legame peptidico C-N

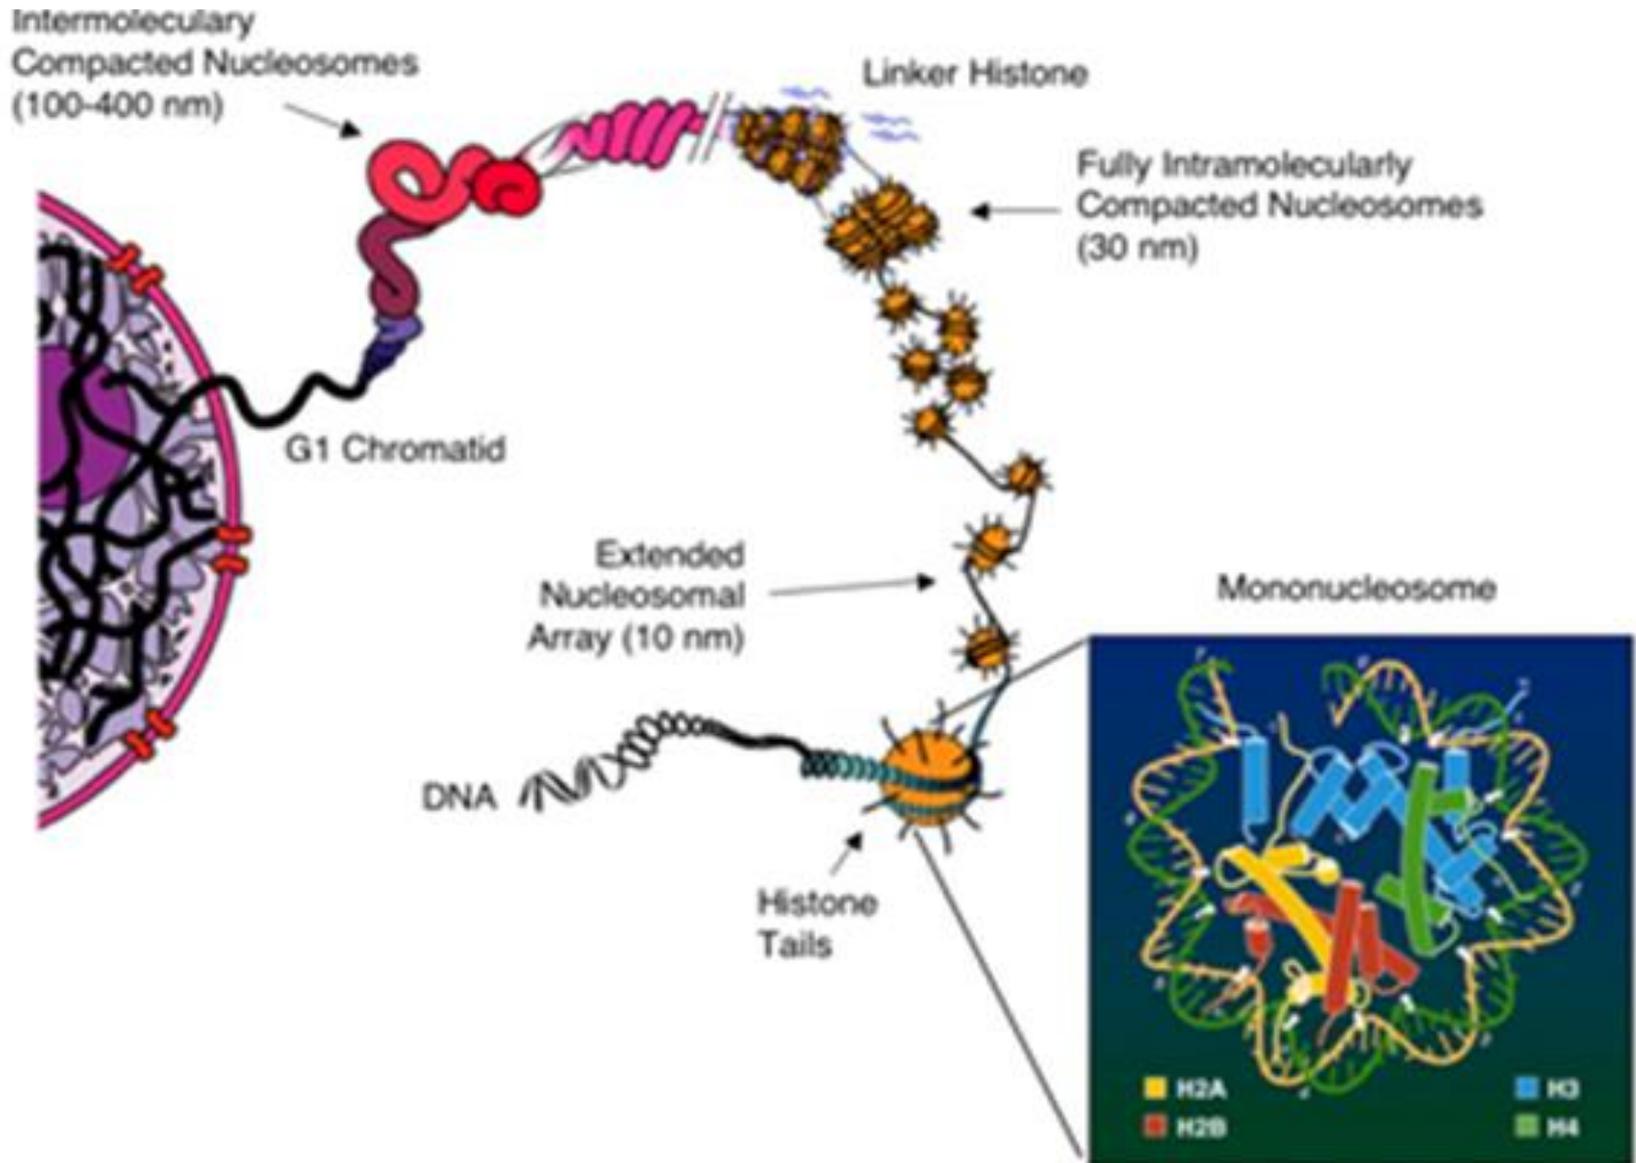

Matrix Metalloproteinases (MMPs) + Tissue Inhibitors of Metalloproteinases (TIMPs)

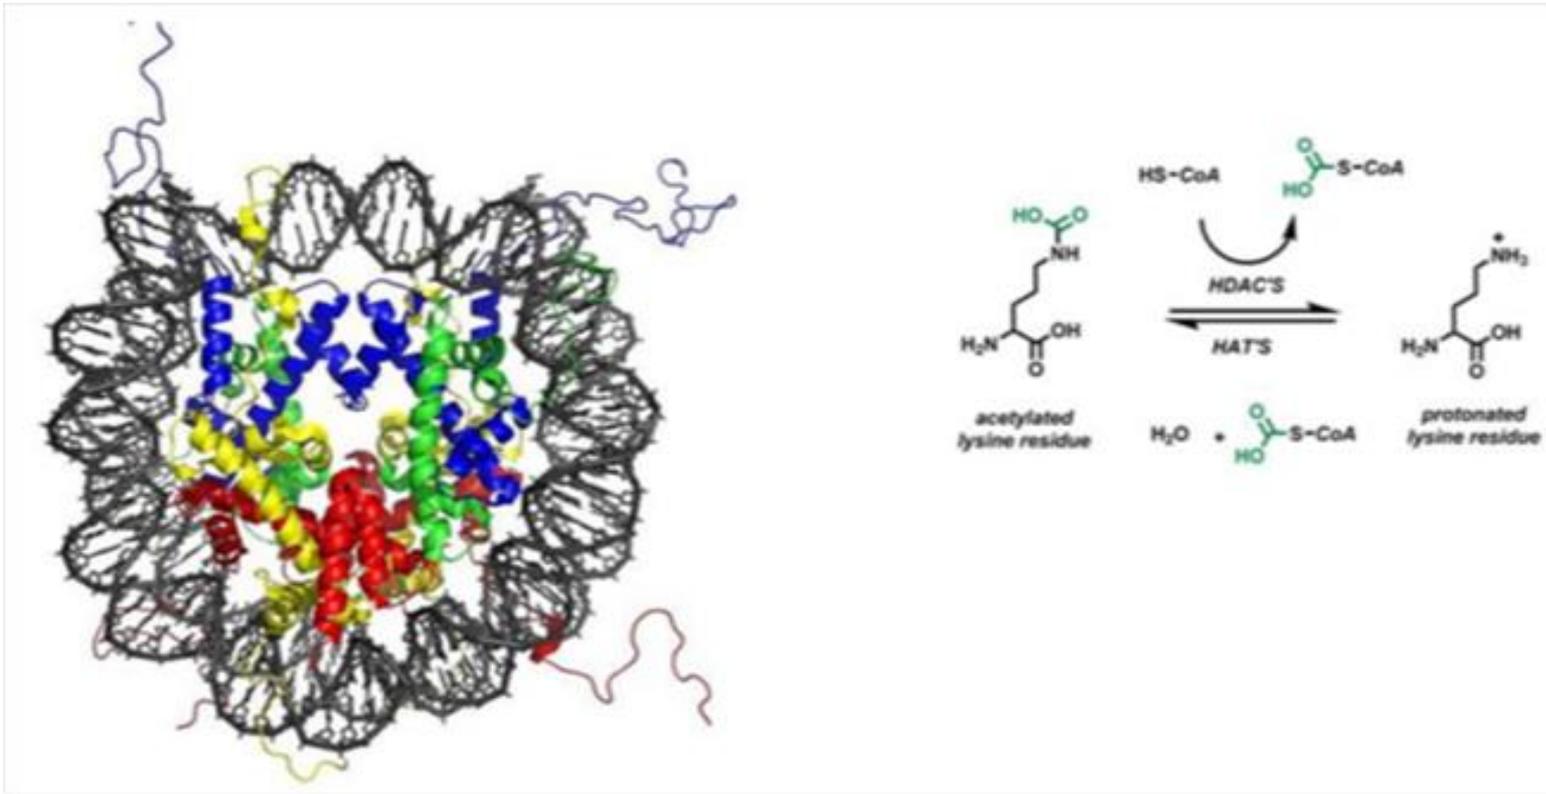

Processo metastatico favorito da MMP

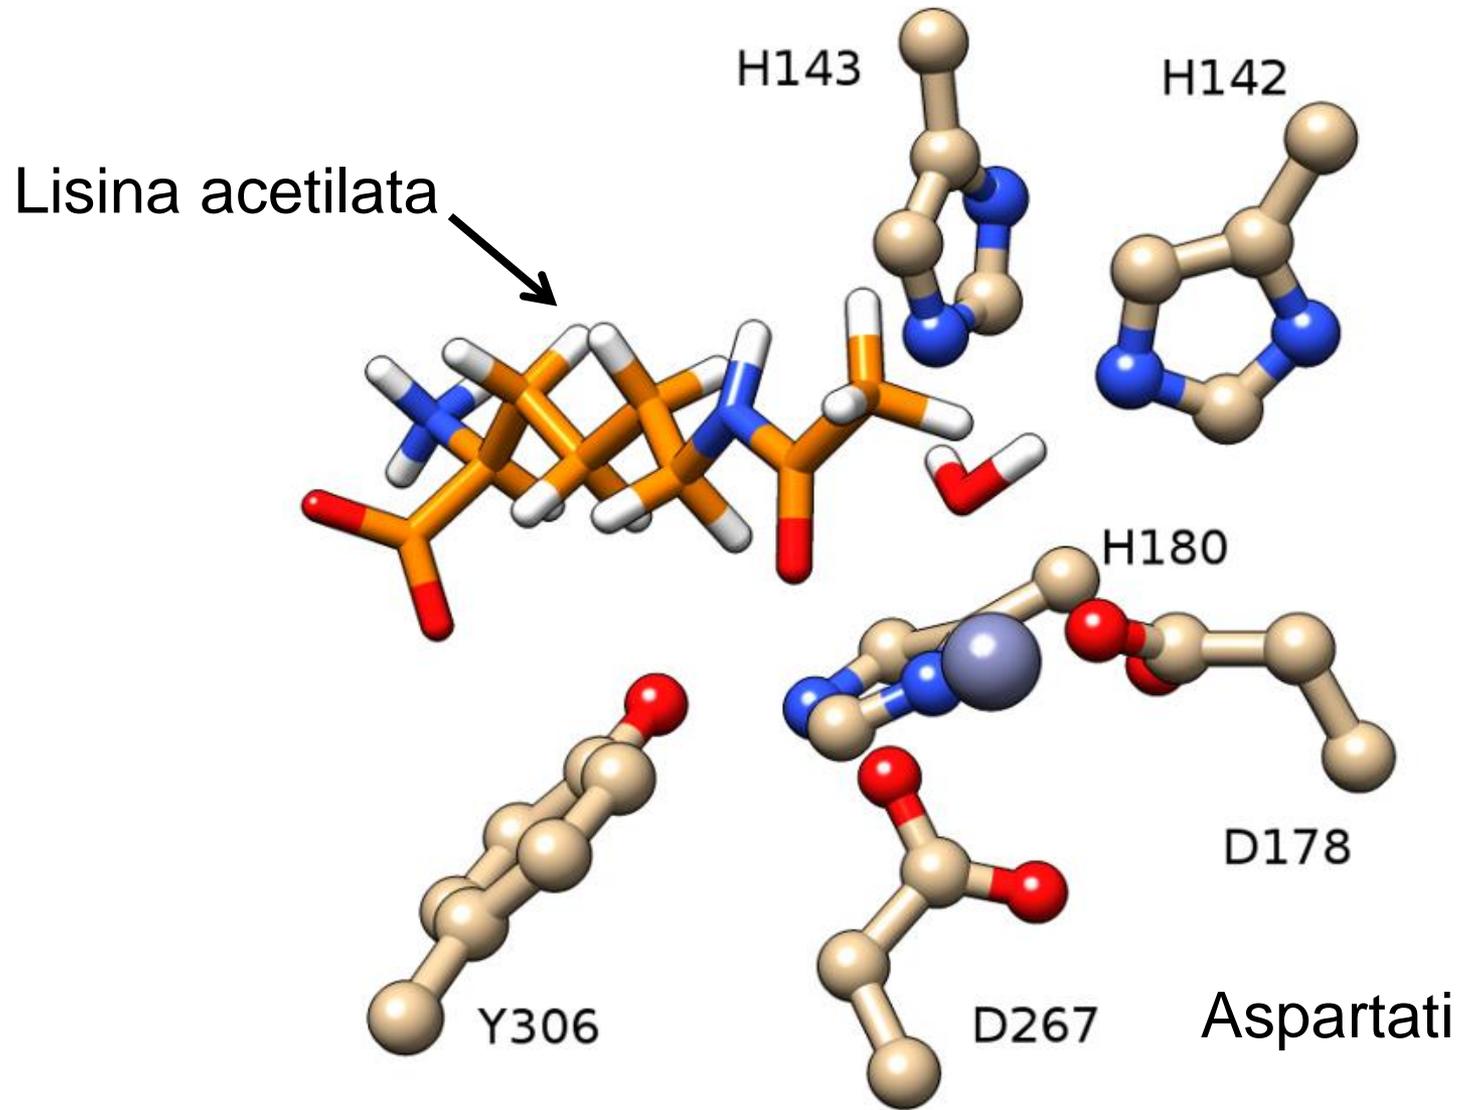

Cromatina e Nucleosomi

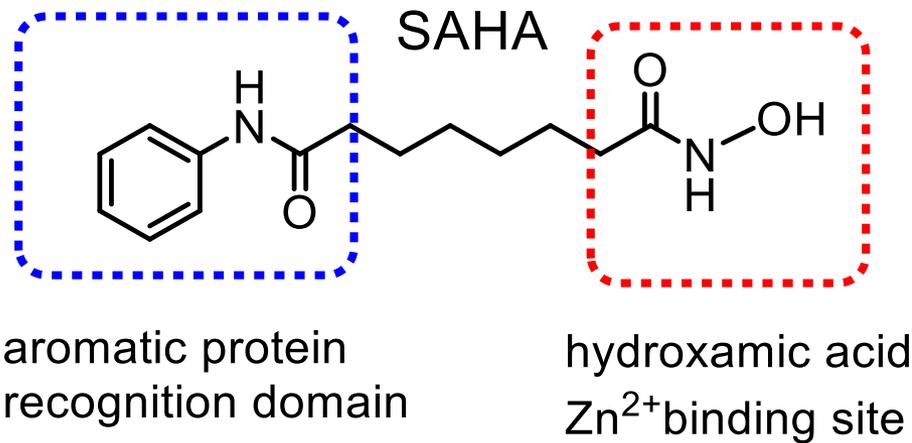

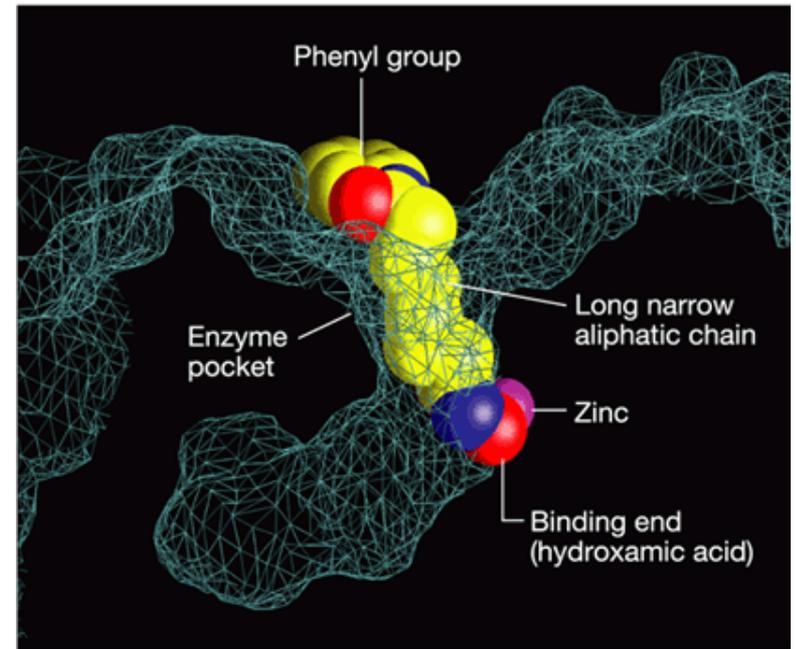

Sito attivo di HDAC8

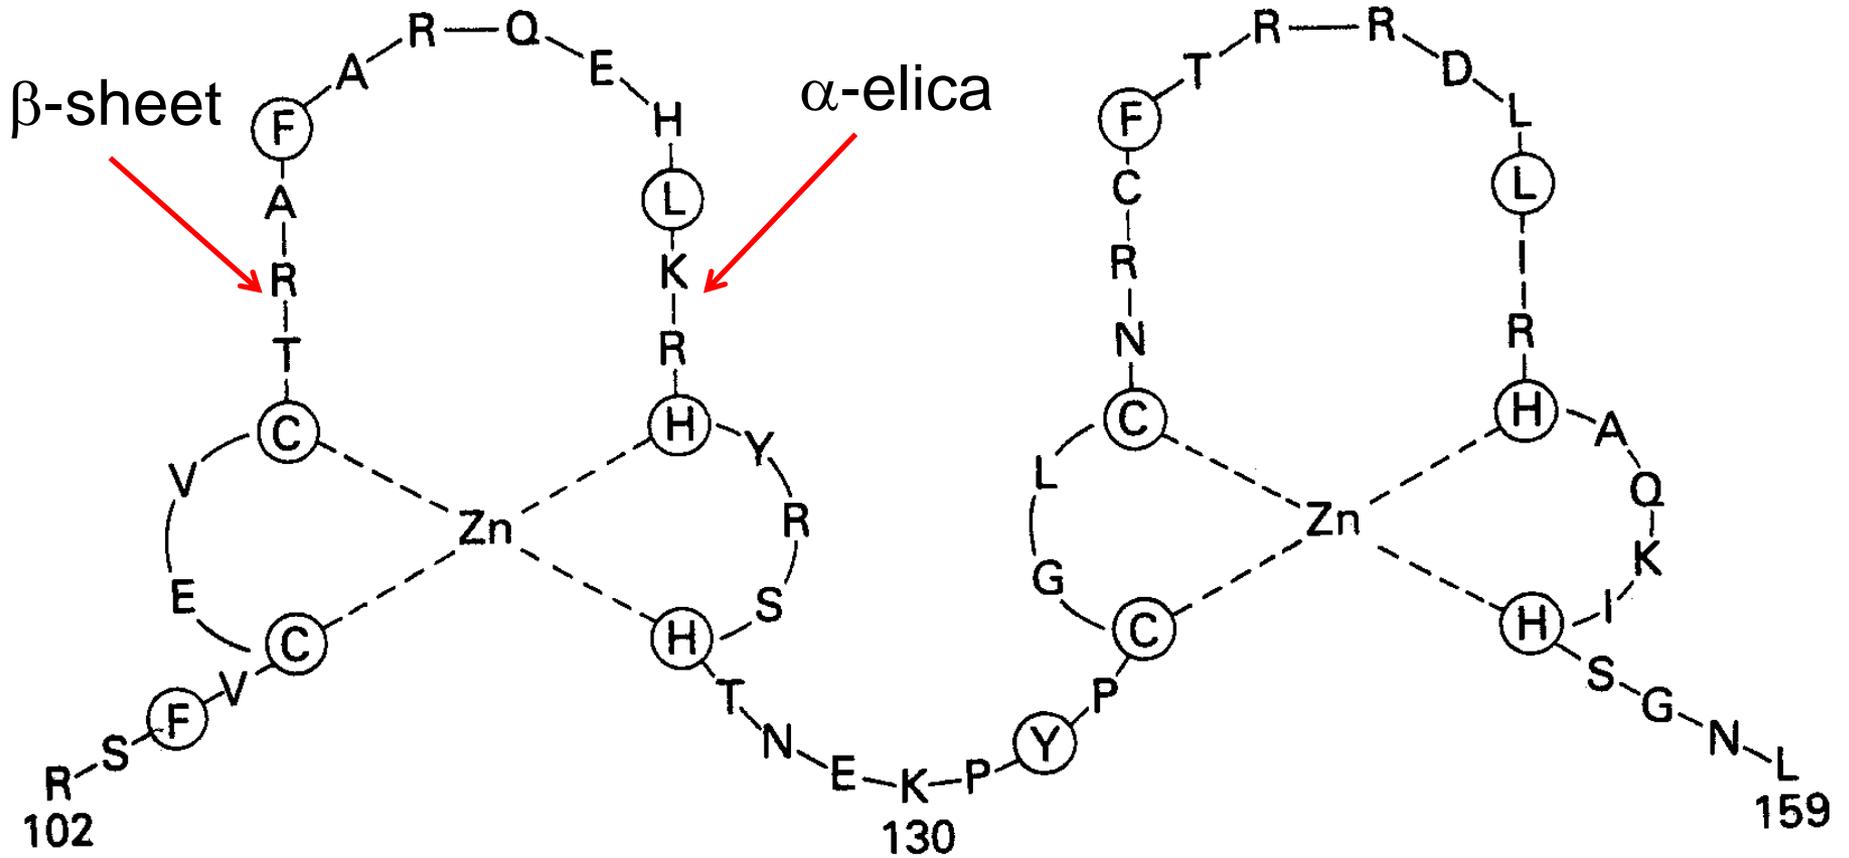

HDAC Inhibitors (HDACi) agenti antitumorali (*modulazione epigenetica del DNA*)

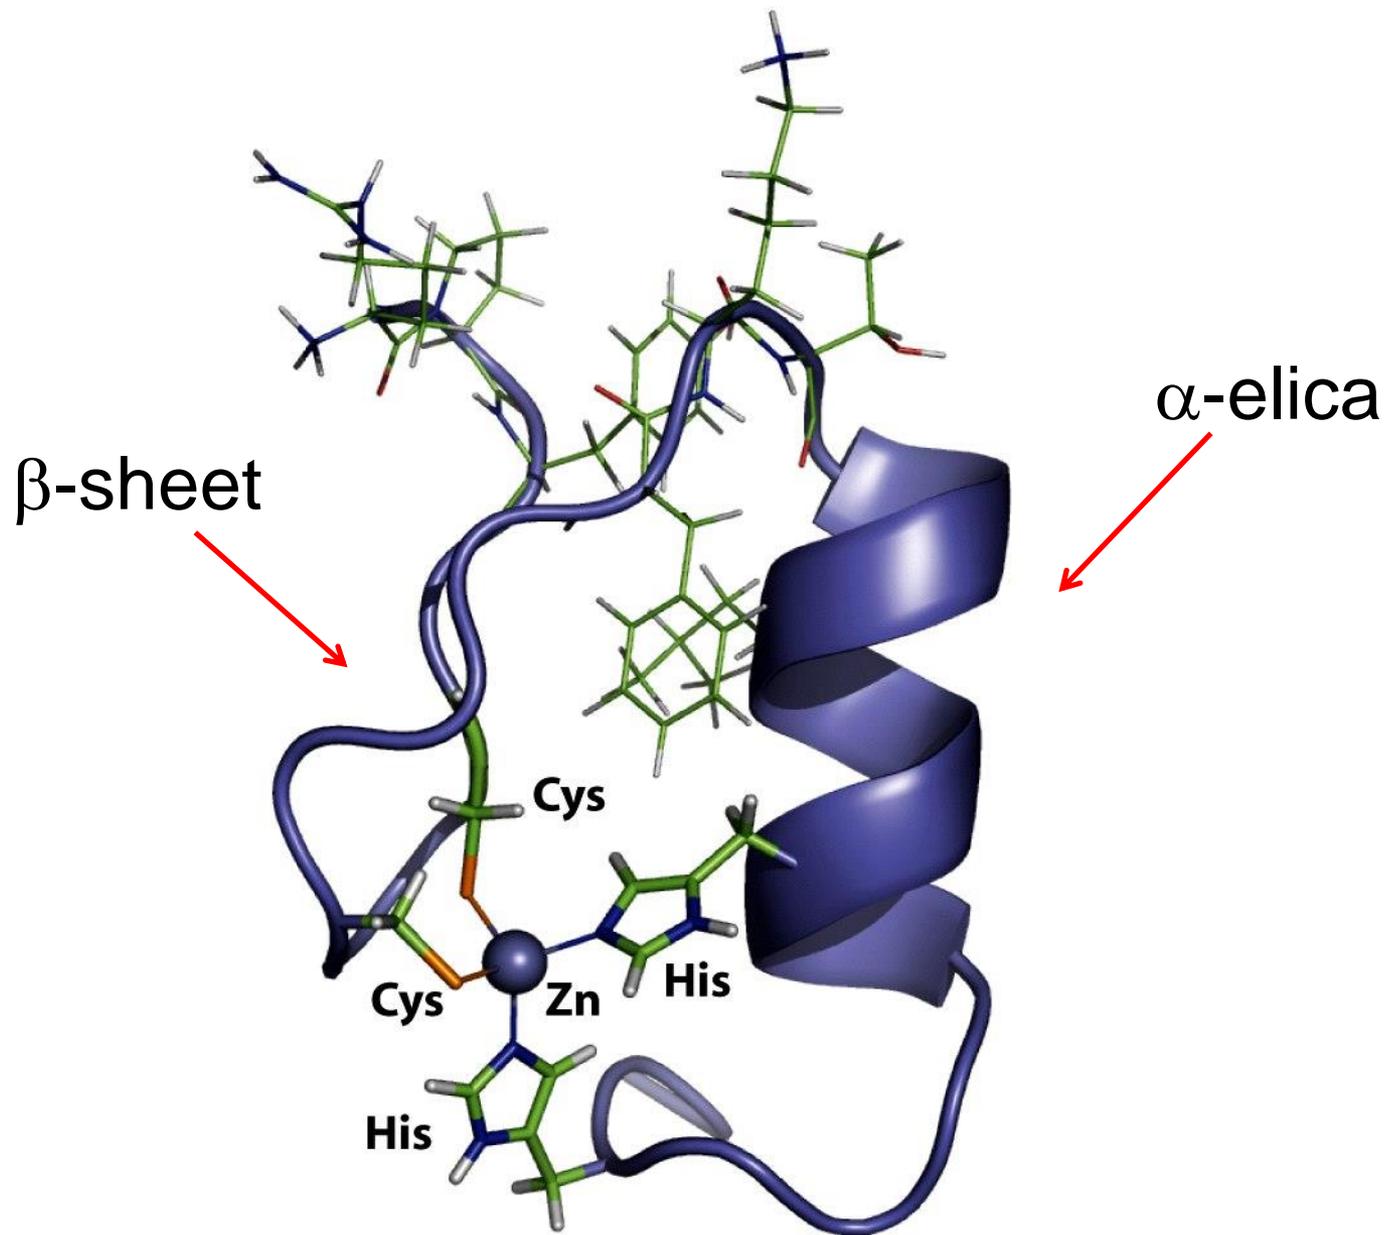

Zolinza®

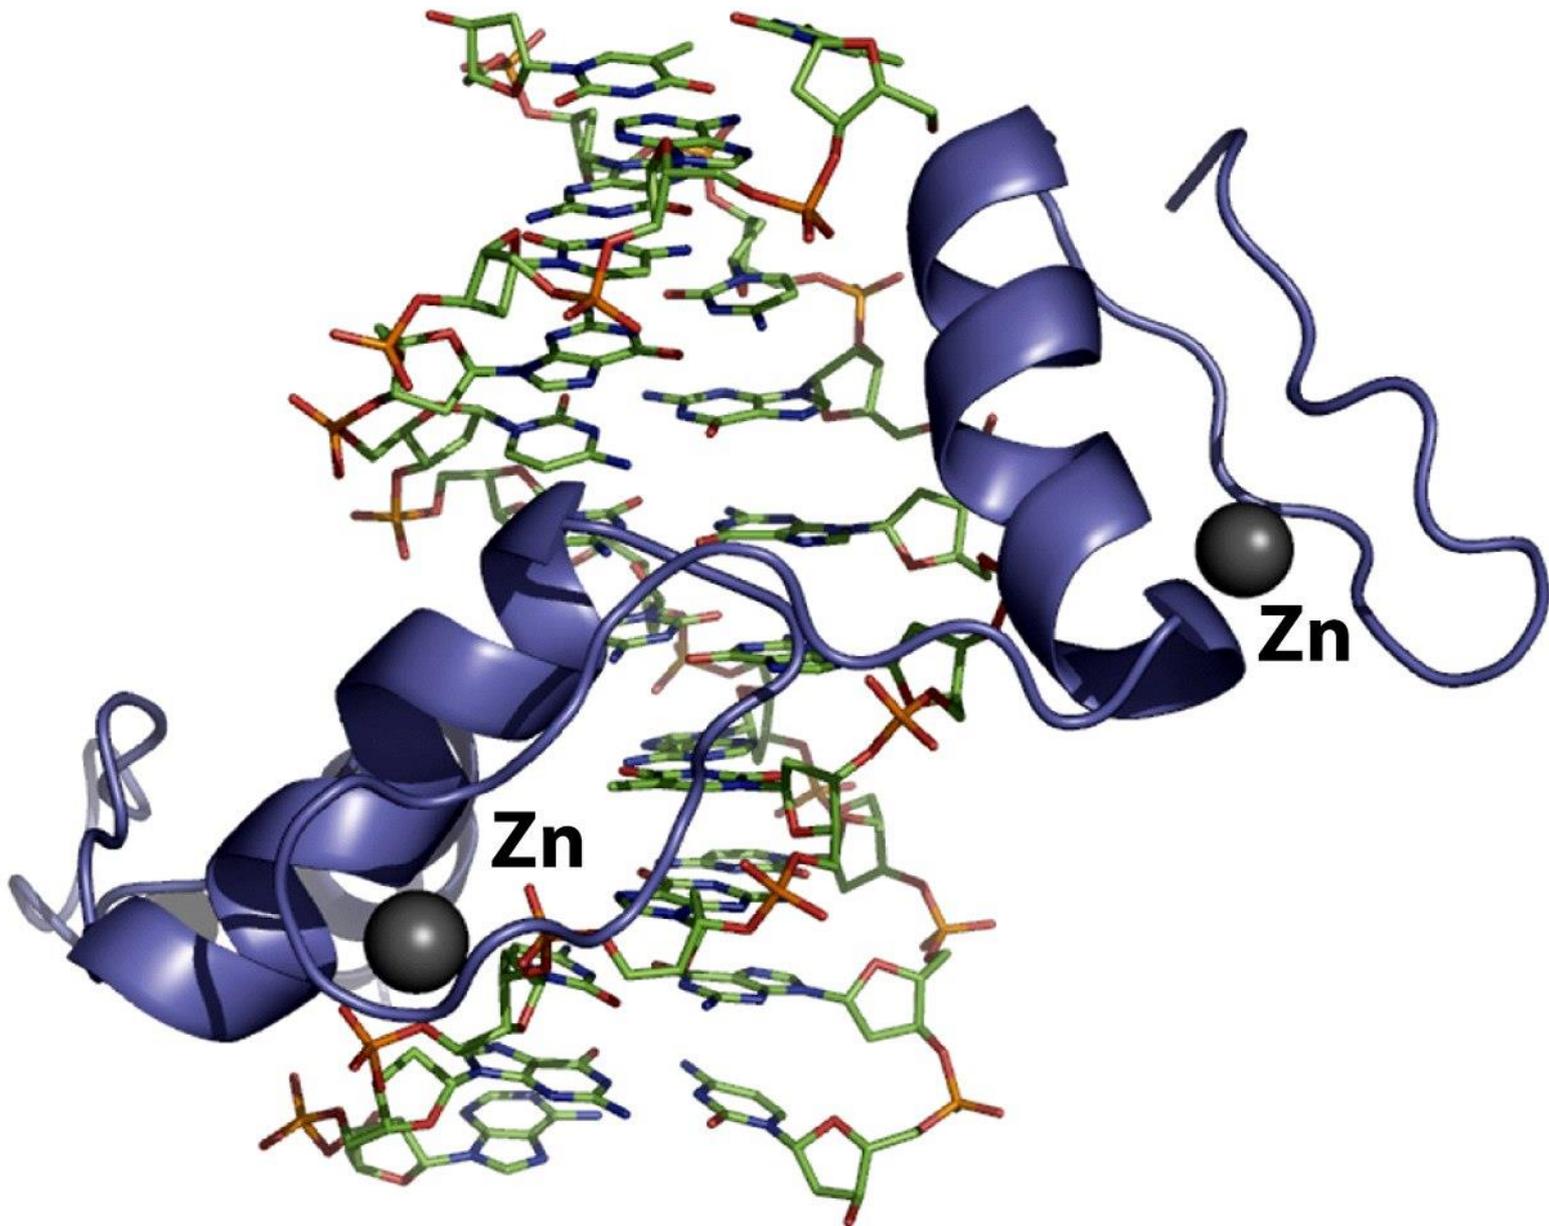

Zinc fingers

gene regulatory proteins e transcription factors

Interazione di zinc-fingers con DNA
