

Una riflessione su concetti/indicatori e oggettivo/ soggettivo: la "recovery"

Remission as perceived by people with schizophrenia,
family members and psychiatrists (Karow et al., 2010)

The aim of this observational study was to assess symptomatic remission by patients with schizophrenia, family members and psychiatrists and to compare their assessments with standardized criteria and clinical measures.

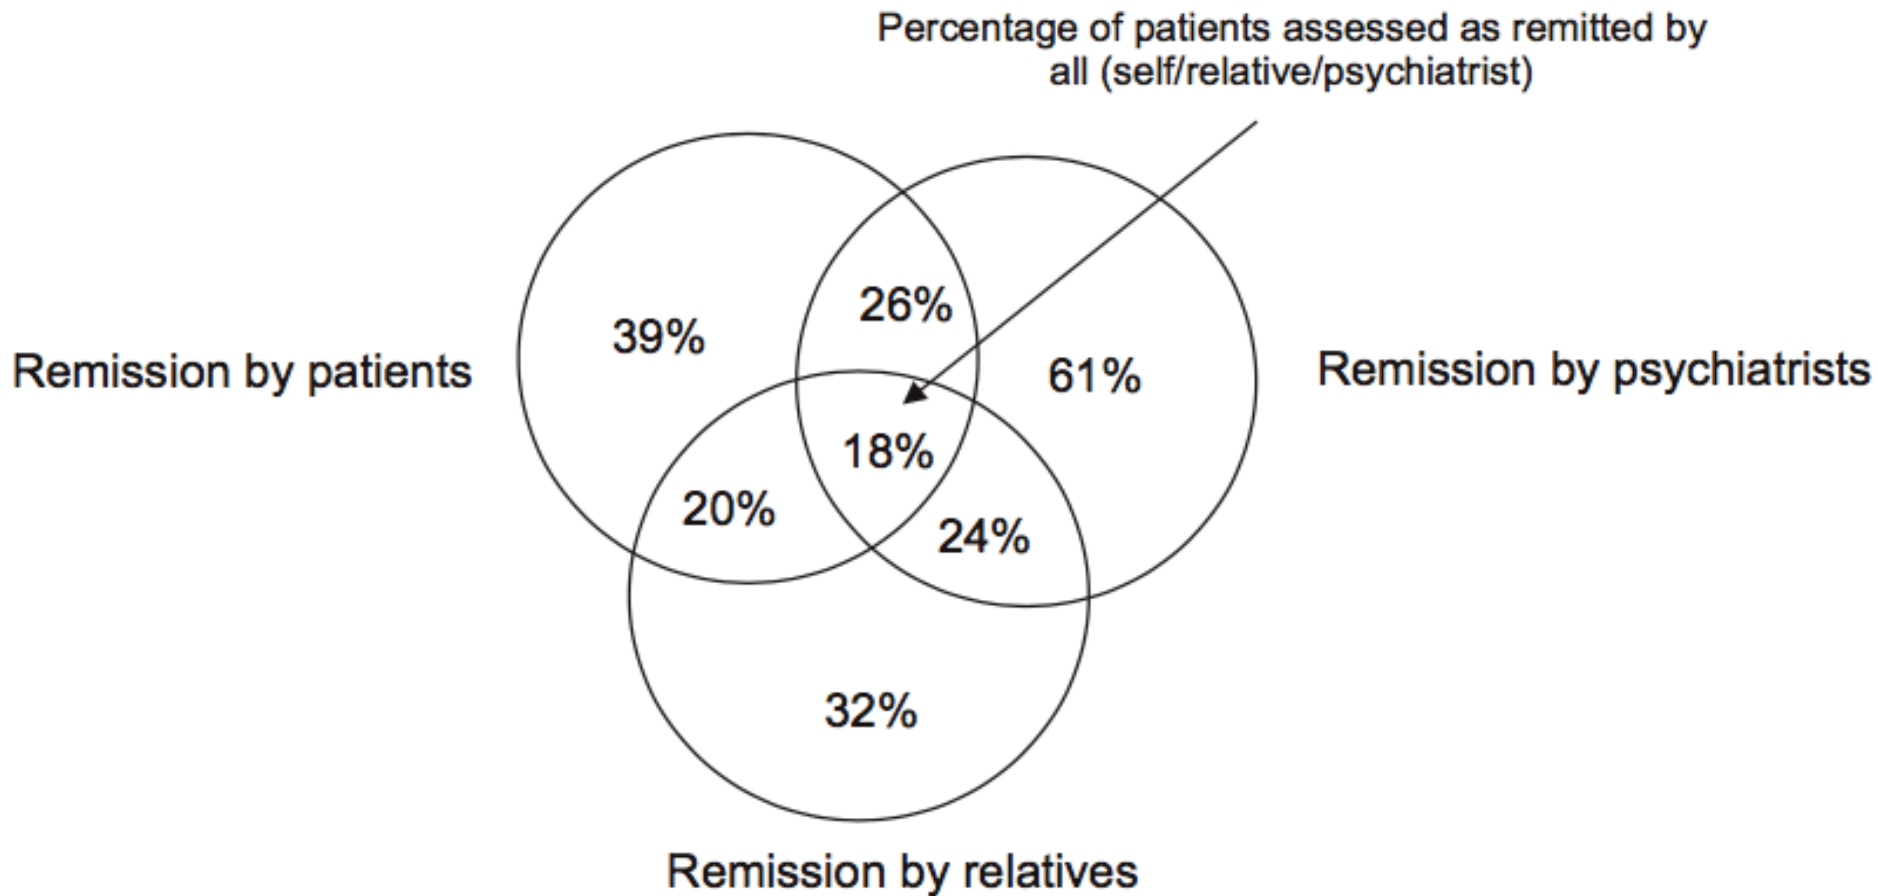

-Strumenti: scale standardizzate

-Valutazione

- Degli psichiatri
- Dei/delle pazienti
- Dei familiari

Una riflessione su concetti/indicatori e oggettivo/ soggettivo

44% dei/delle pazienti erano "recovered" secondo le scale standardizzate

Una riflessione su concetti/indicatori e oggettivo/ soggettivo

Table 2
Standardized remission criteria [1,35] versus estimates of remission by patients, relatives and psychiatrists.

Standardized remission criteria		Remission % (n)	No remission % (n)
Psychiatrist N = 130	Remission	81% (47)	44% (32)
	No remission	19% (11)	56% (40)
Patient N = 129	Remission	43% (25)	35% (25)
	No remission	57% (33)	65% (46)
Relative N = 90	Remission	52% (22)	16% (9)
	No remission	48% (20)	84% (47)

Qual è il “buon” indicatore di recovery?
