VISUAL PERCEPTION (2)

Color

Color

Motivation

Color perception

Color specification

Color use

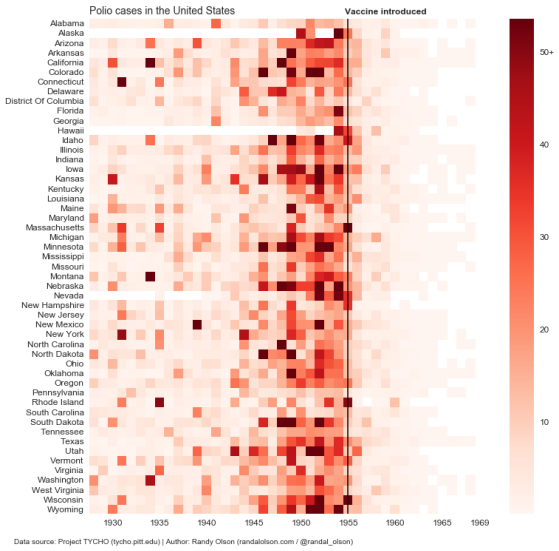
Motivation

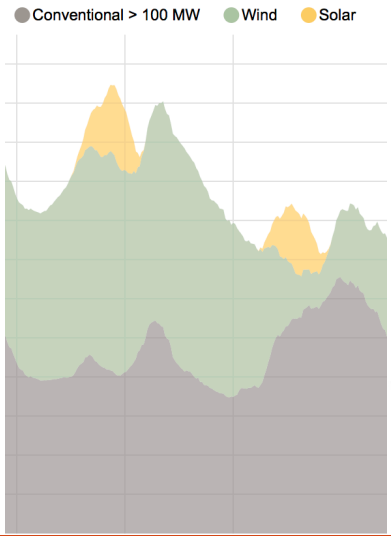
Motivation

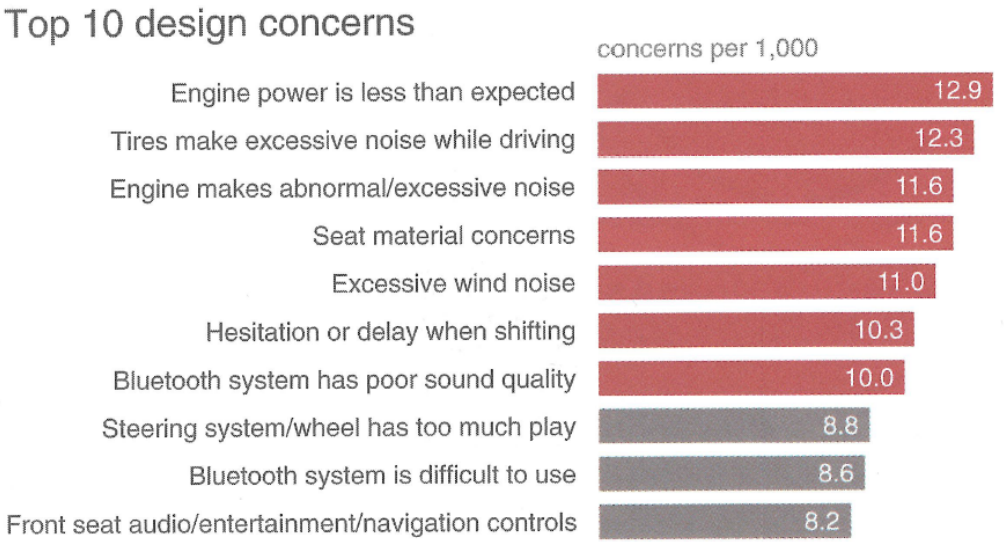
Color is a very powerful visual channel

Often used to

- Detect patterns (for example, in heat maps)
- Label data to distinguish between categories
- Highlight specific objects (to draw attention)



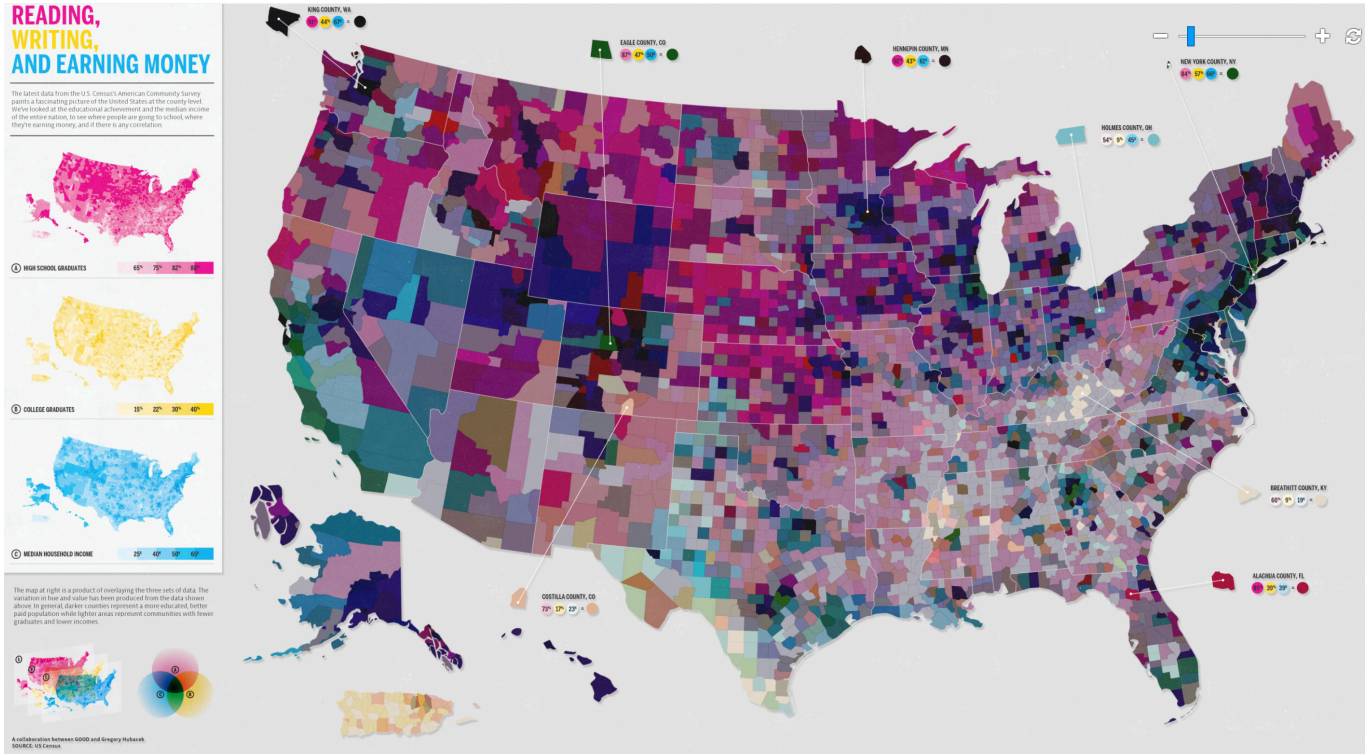




Color (mis)use

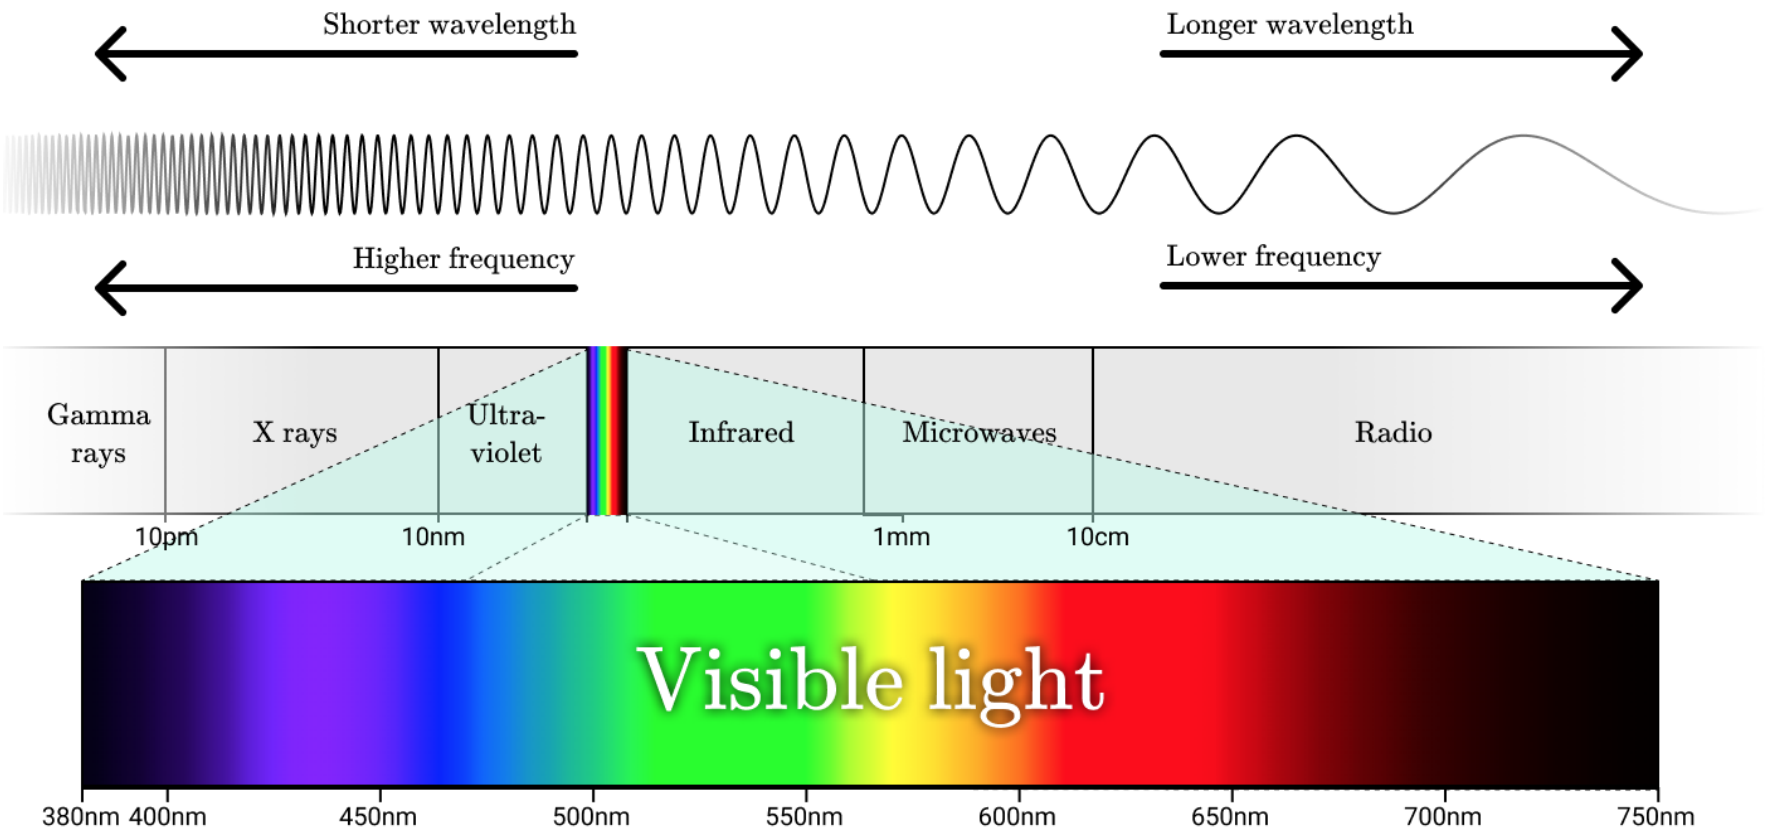
Above all, do no harm

Edward Tufte



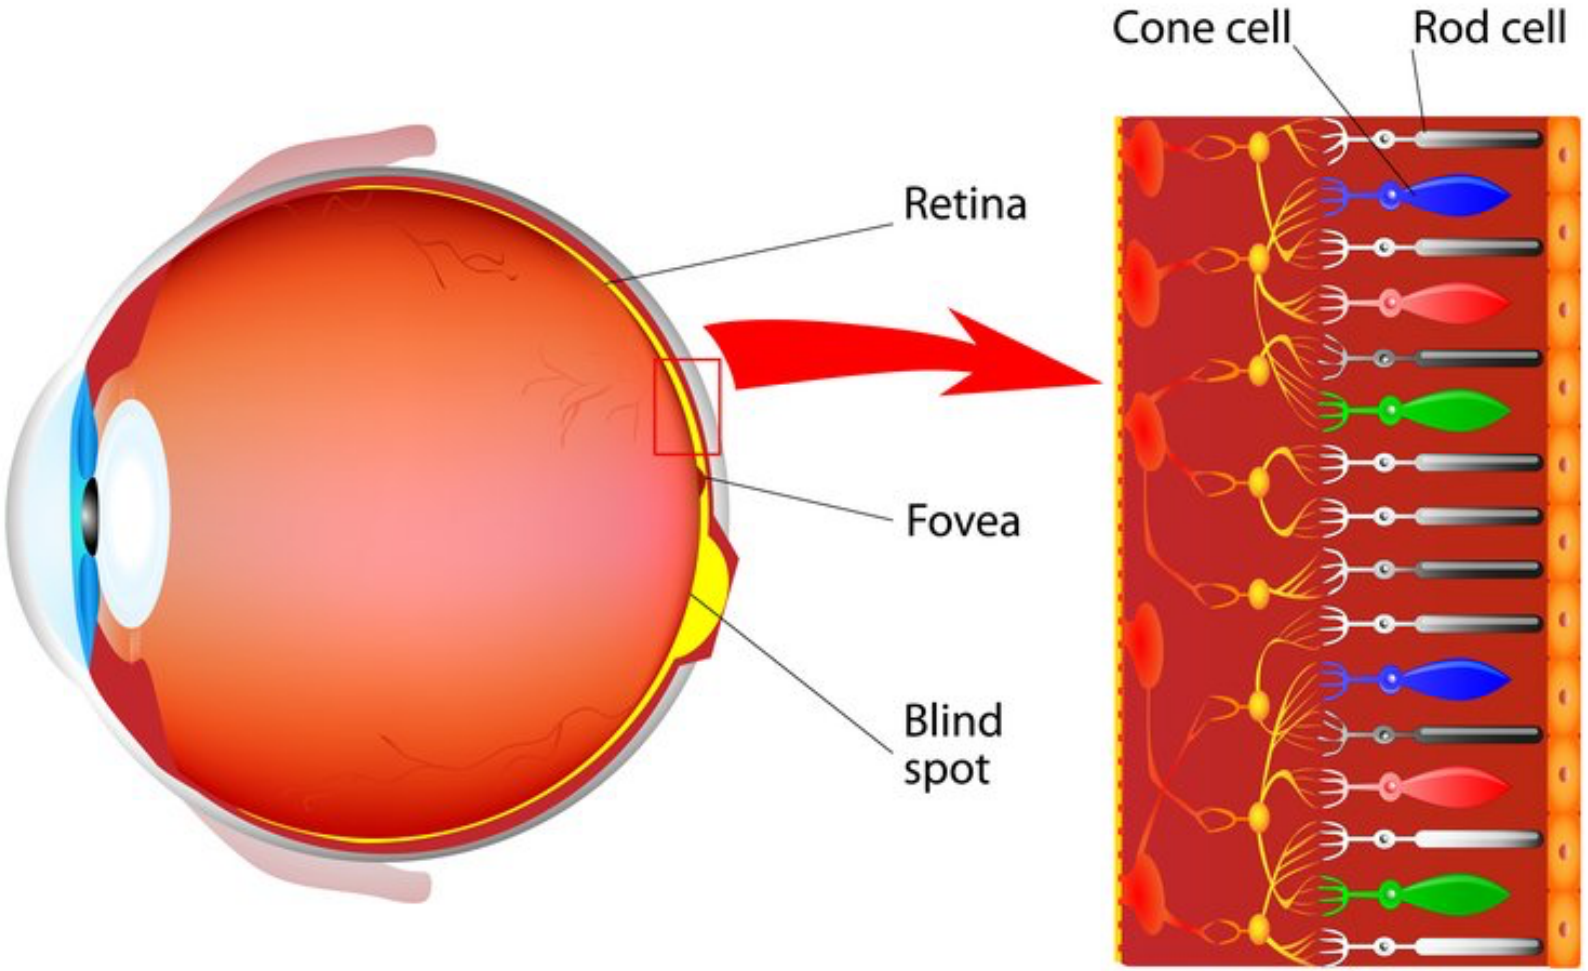
Color perception

Light



http://jamie-wong.com/post/color/

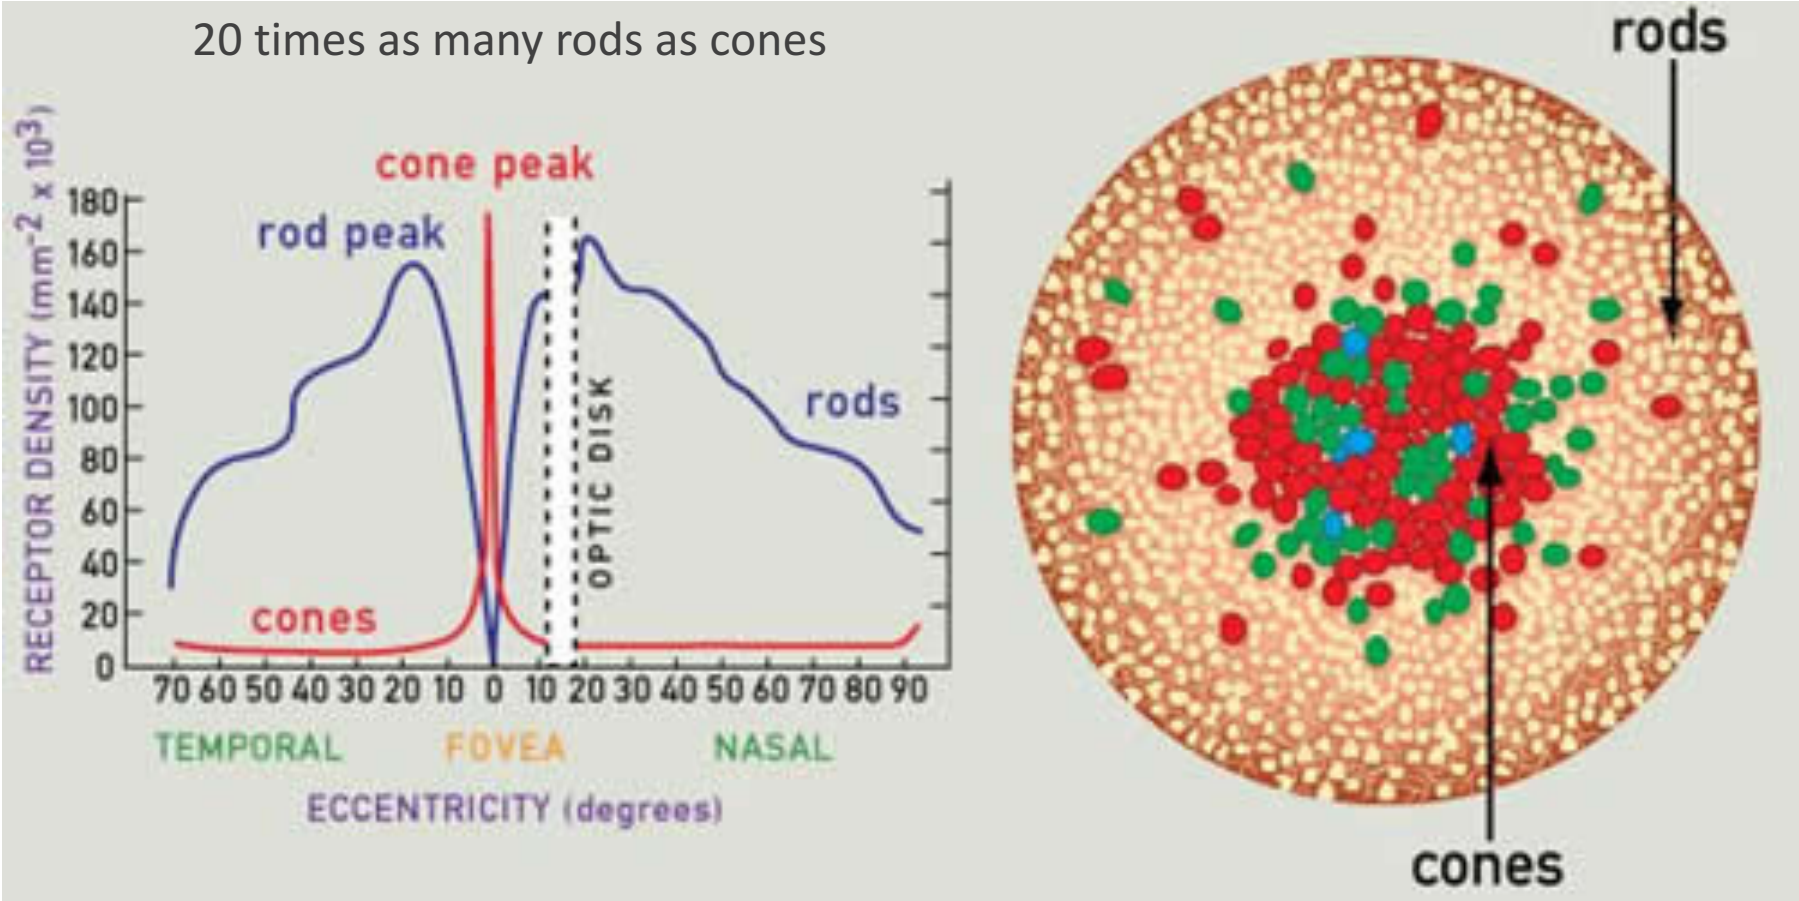
The human eye



https://www.webrn-maculardegeneration.com/rods-and-cones.html

Rods and cones

20 times as many rods as cones



Filling in the blanks

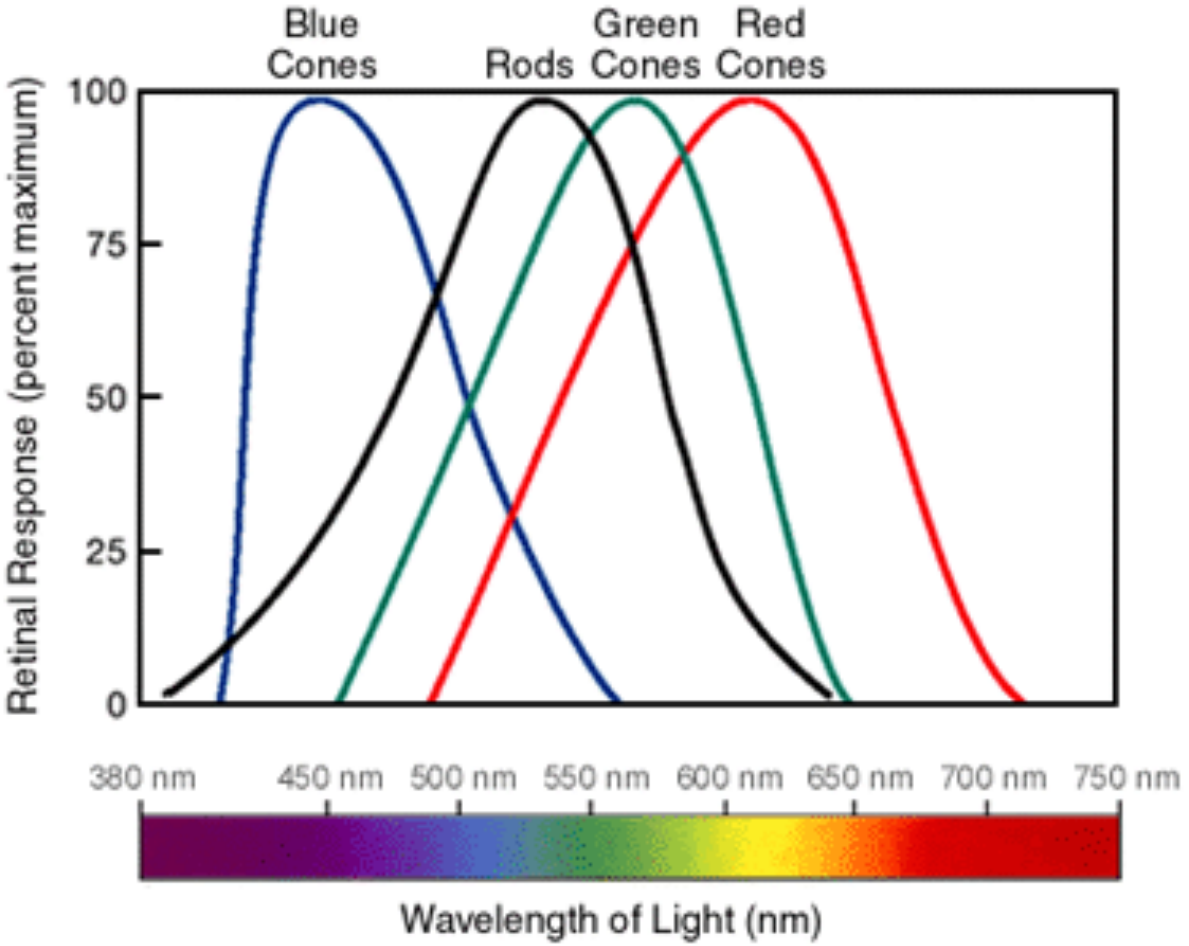
We don't see images with our eyes, we see them with our brains.

Stephen Few

Filling in the blanks

https://petapixel.com/2019/07/31/this-black-and-white-photo-uses-color-grid-lines-to-trick-your-brain/

Sensitivity of rods and cones



https://askabiologist.asu.edu/rods-and-cones

Trichromatic theory of color

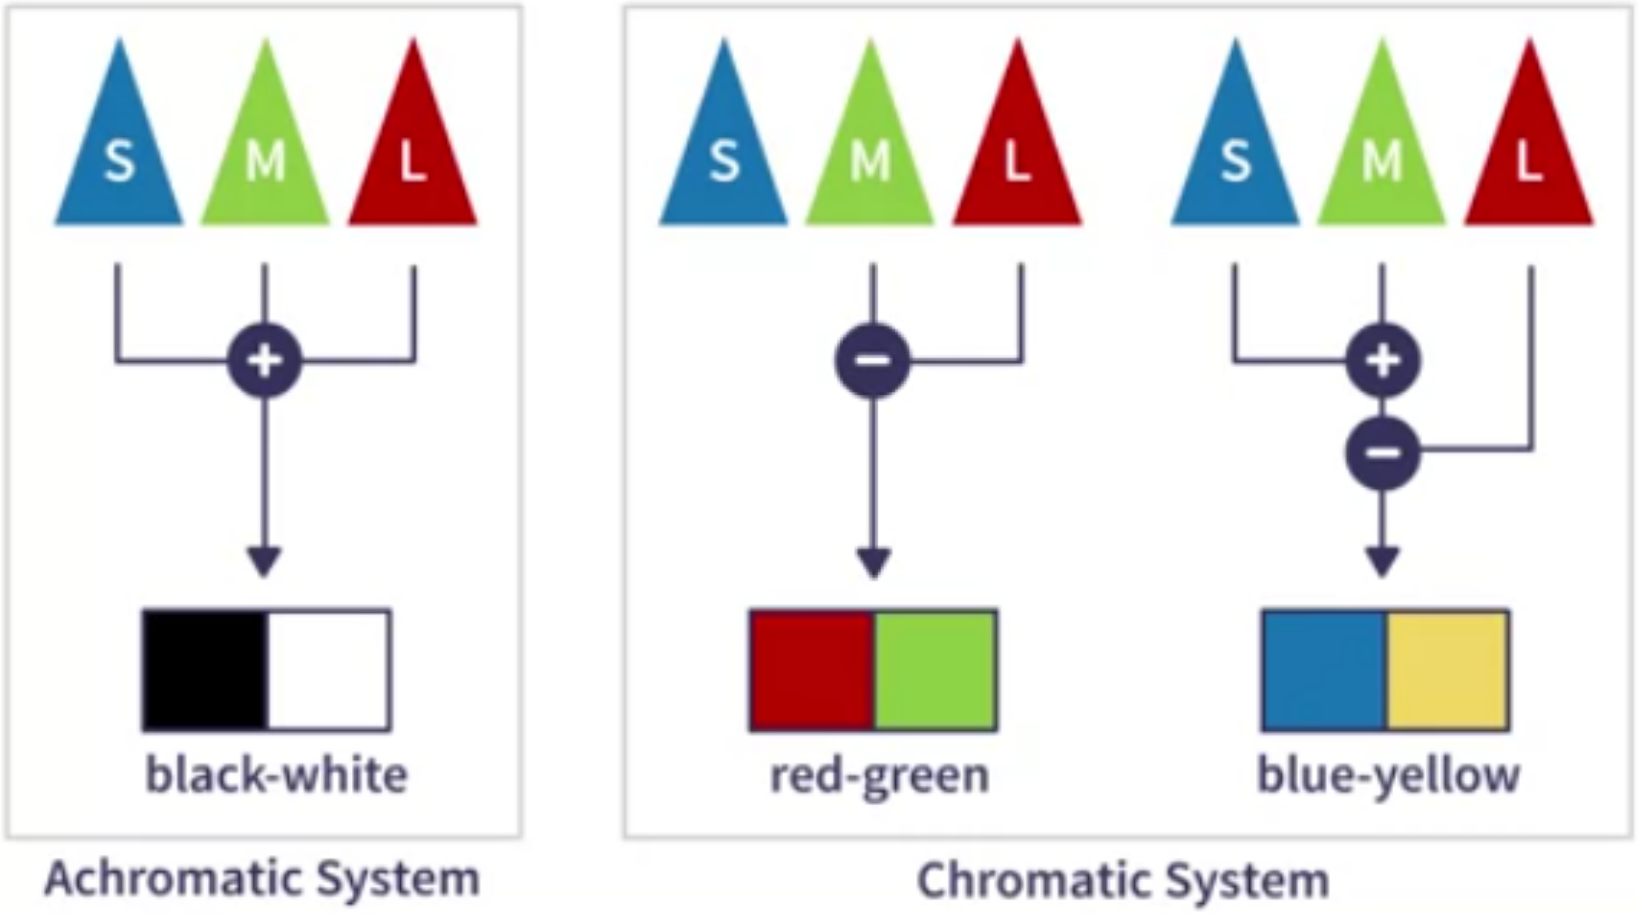
We have three kinds of color receptors

- S = short wavelength (“blue” cones)
- M = medium wavelength (“green” cones)
- L = long wavelength (“red” cones)

Any visible color can be expressed as a combination of three primary colors

However, we don’t perceive color in terms of amount of blue, green and red

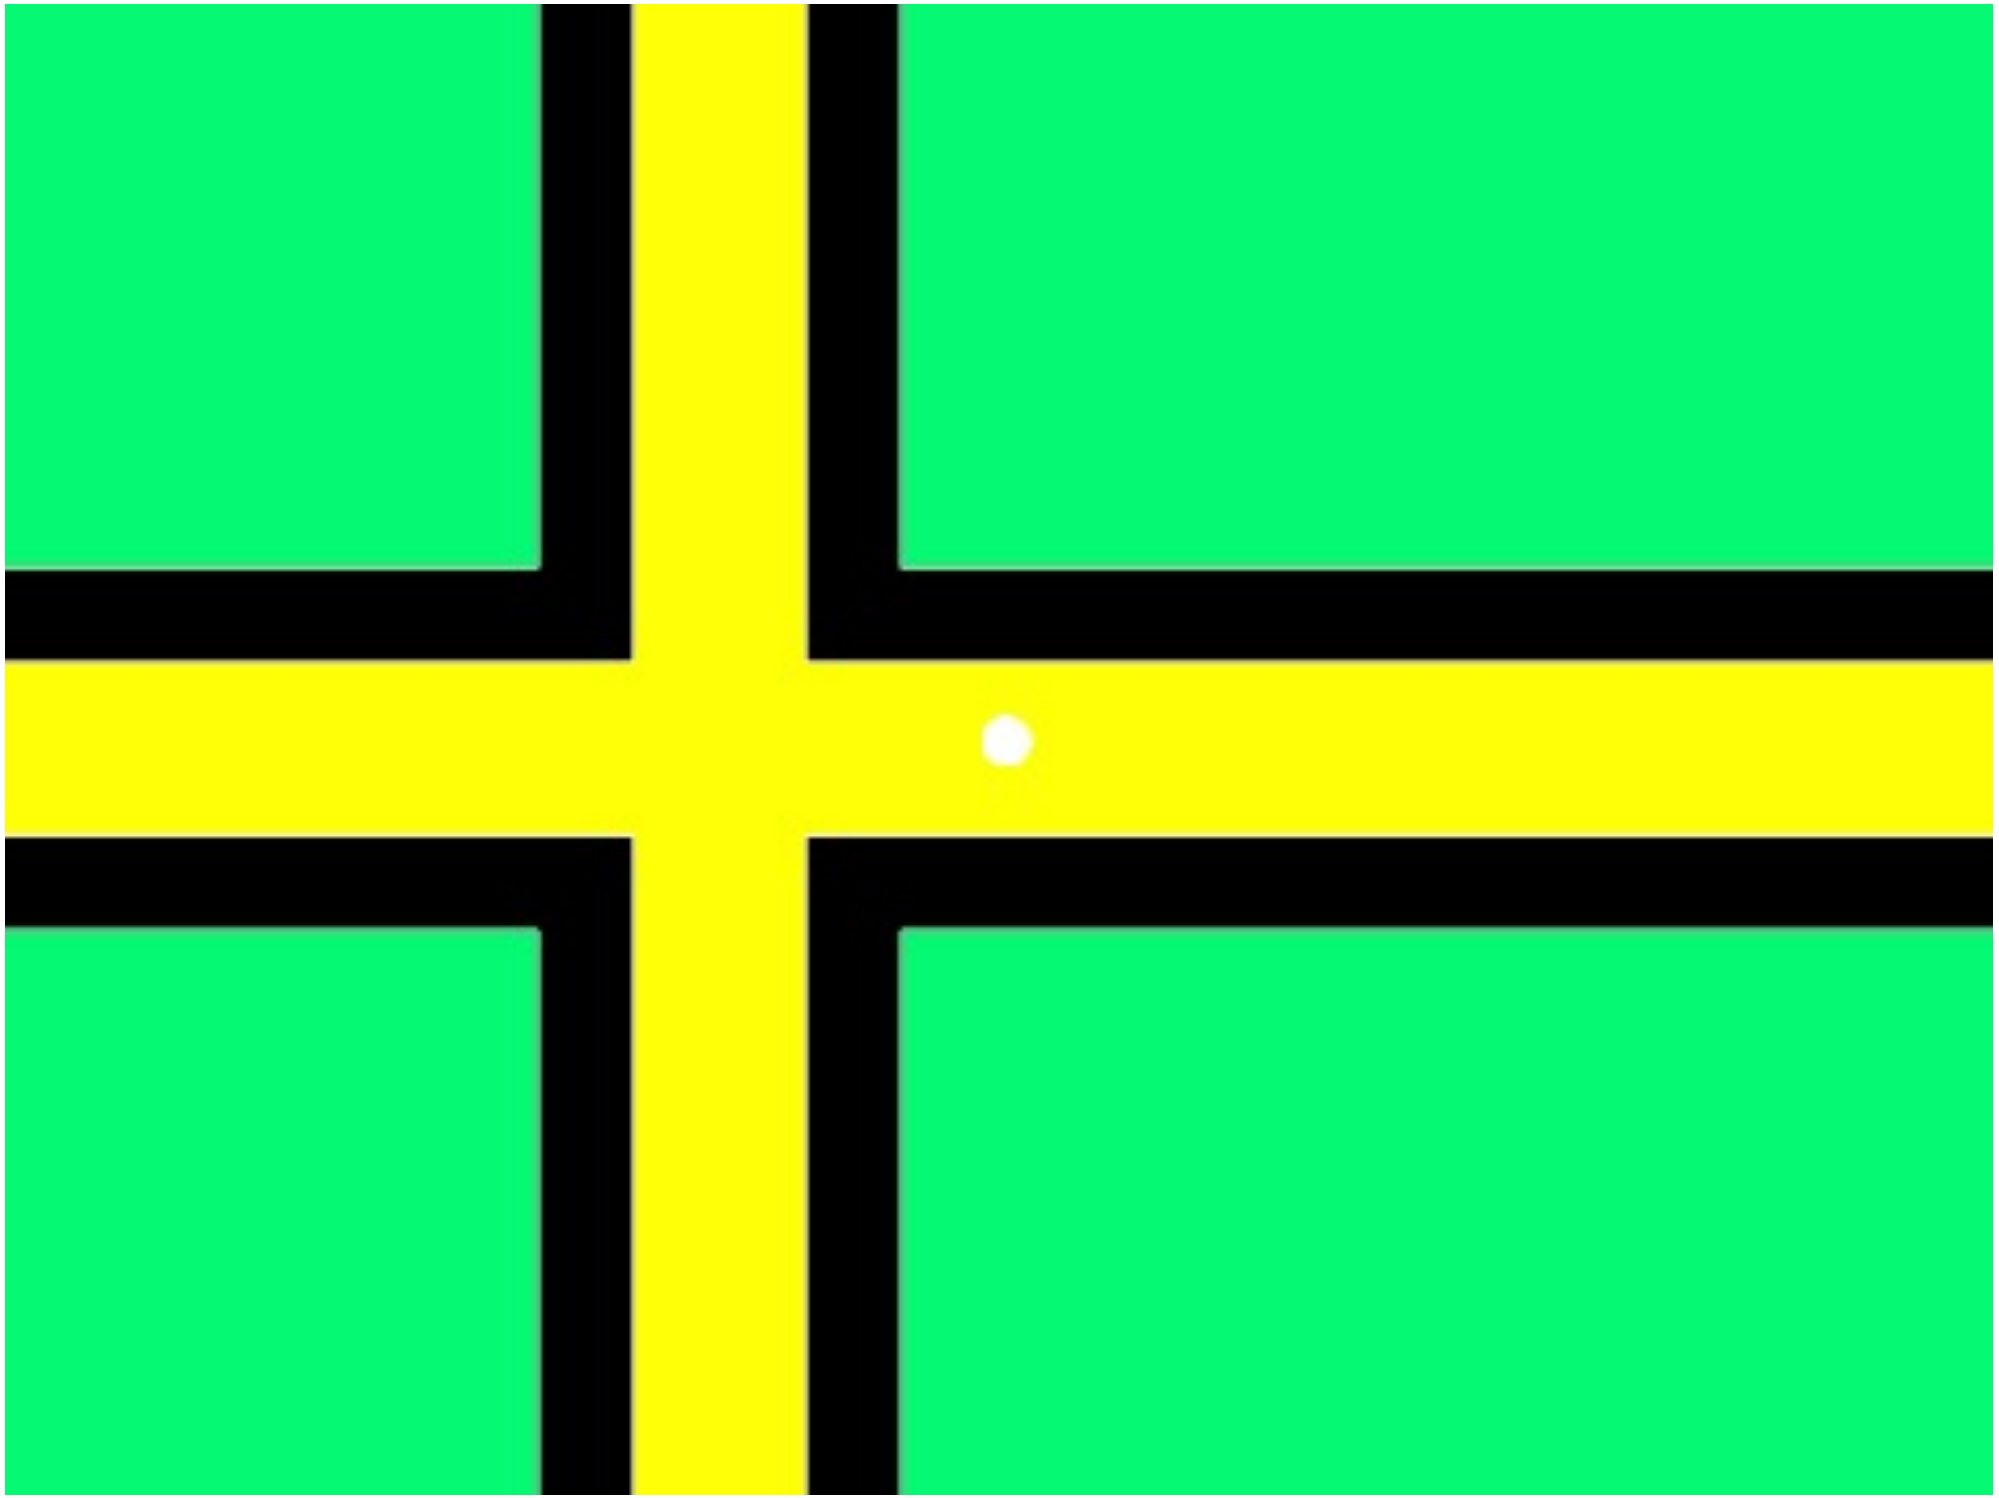
Color opponent process theory



Color opponent process theory

Facts that seem to corroborate the theory

- We don’t perceive neither the “red-green color” nor the “blue-yellow color”
- Colorblind people tend to be blind on exactly these two axes (most often red-green and lest often blue-yellow)
- The following example



Color opponent process theory

Facts that seem to corroborate the theory

- We don't perceive neither the "red-green color" nor the "blue-yellow color"
- Colorblind people tend to be blind on exactly these two axes (most often red-green and lest often blue-yellow)
- The previous example

After staring at these colors, the sensors inhibit them and you see their opposites

Color perception summary

Human eye

- Fovea
- Rods (low light conditions, no colors)
- Cones (colors when enough light)

Trichromacy

- Three receptors of color

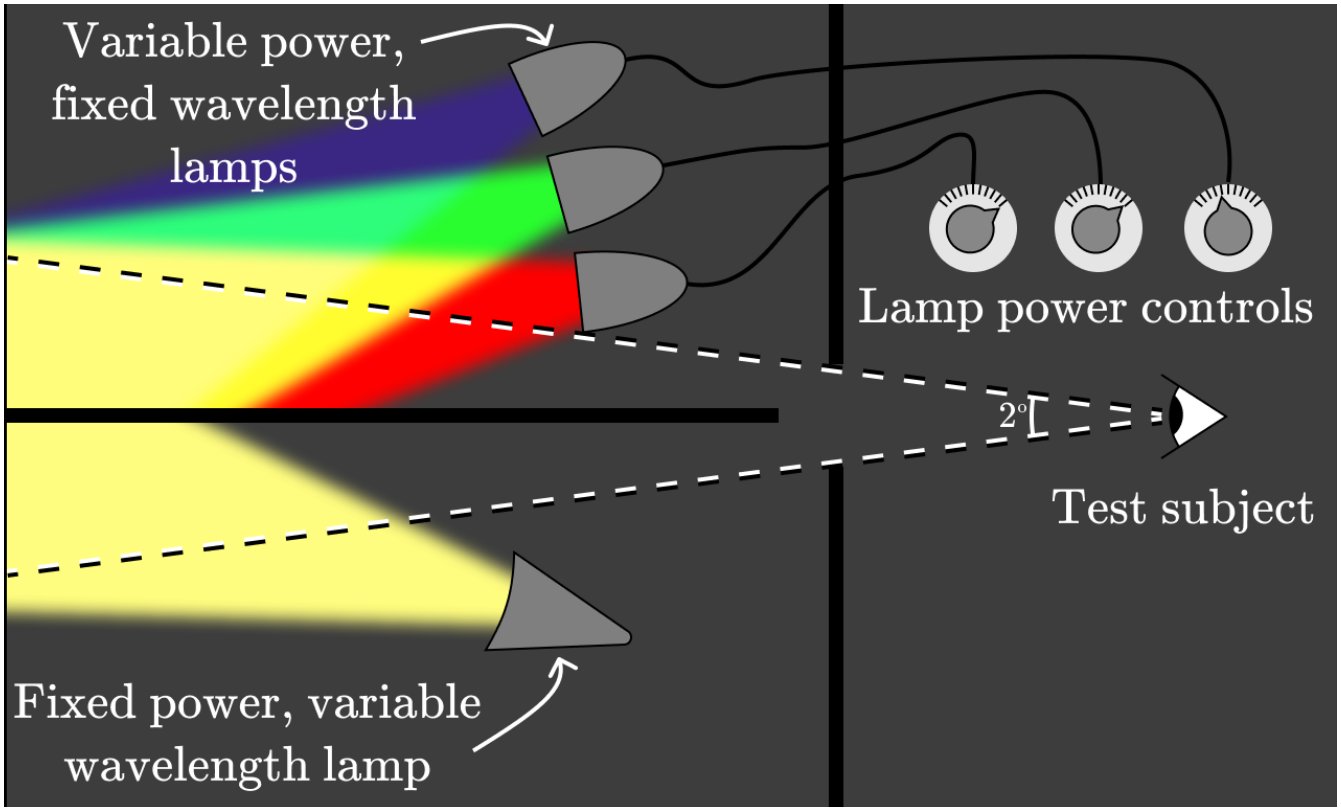
Opponent process theory

- Signals from the eye transformed in the visual cortex to black-white, red-green and blue-yellow axes

Color specification

Color specification

Every color can be expressed as the sum of three colors (in a 3-D space)

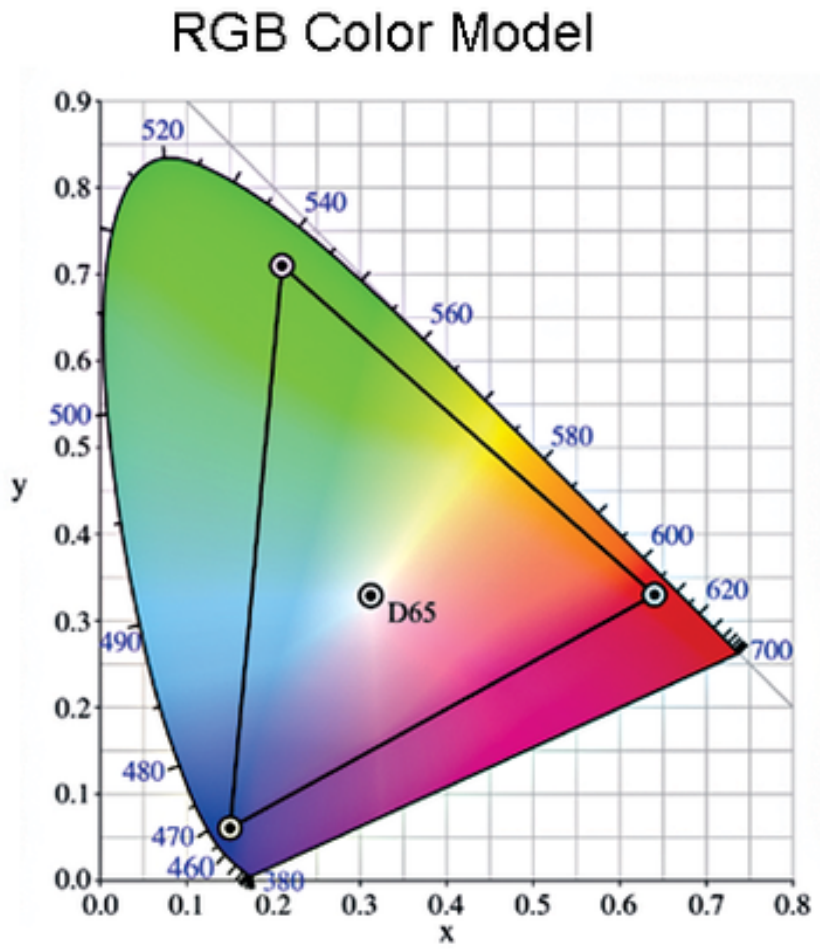


Color spaces

A color space is a (3-D) system that describes colors

The gamut of the color space is the whole set of colors that can be reproduced by this color space

Not all color spaces are equivalent



https://www.researchgate.net/figure/RGB-Color-Model-and-CIE-Lab-Color-space_fig3_41669565

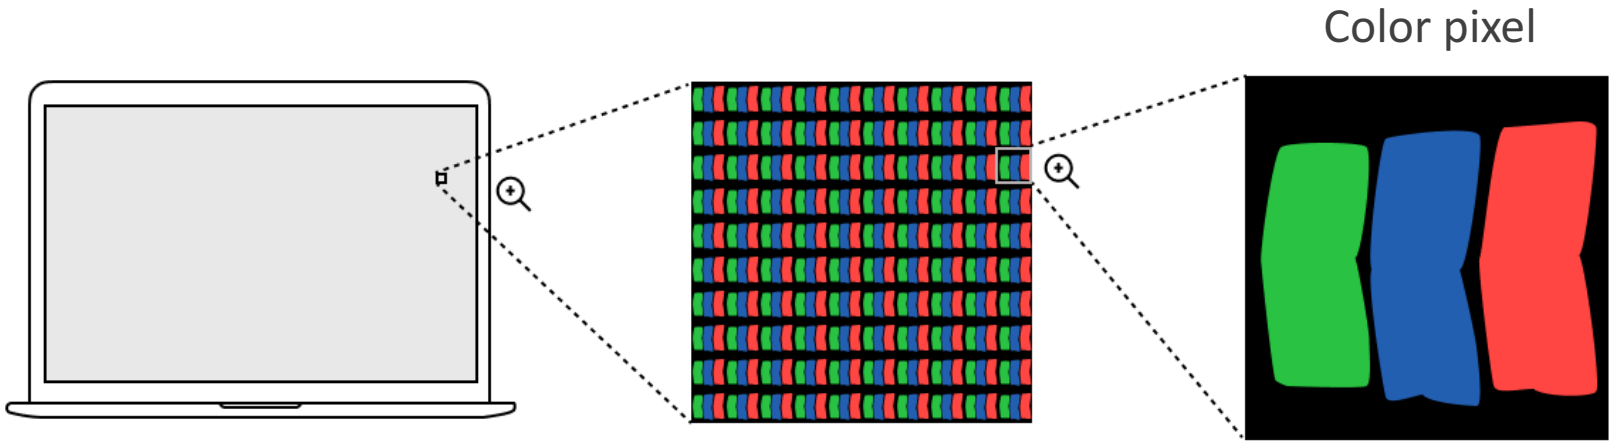
Properties of color spaces

	Intuitive	Perceptually uniform
RGB		
HSL / HSV		
CIE Lab		
CIE LCh / HCL		

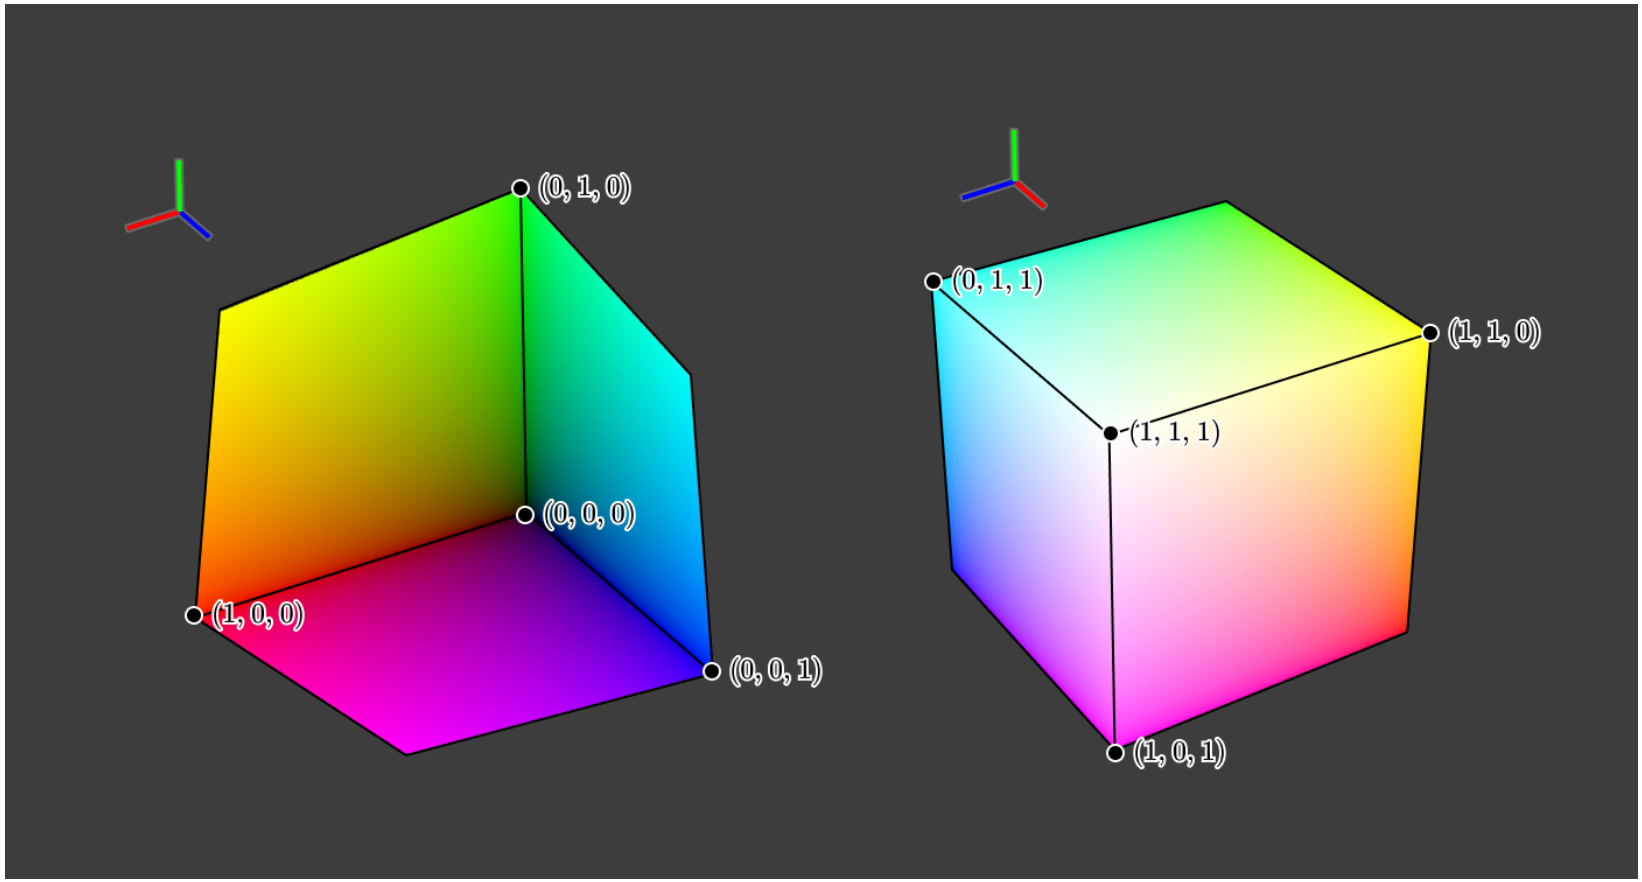
RGB

- R = red
- G = green
- B = blue

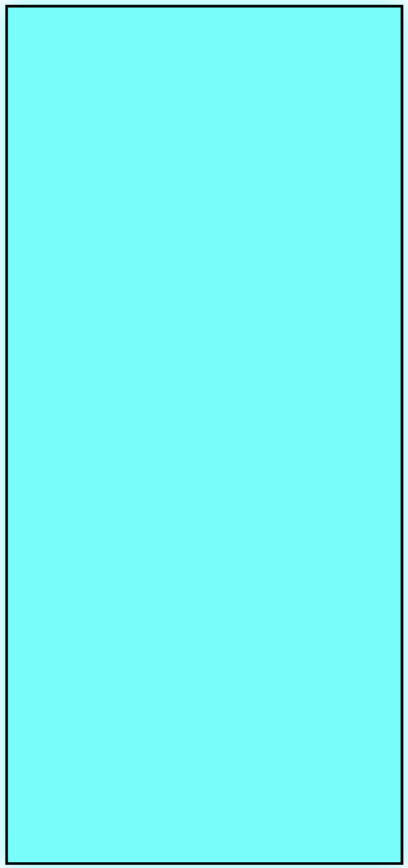
Commonly used in digital devices



RGB



RGB



Red - Currently set to 126
0 32 64 96 128 159 191 223 255
Green - Currently set to 255
0 32 64 96 128 159 191 223 255
Blue - Currently set to 255
0 32 64 96 128 159 191 223 255

RGB

G and B fixed (G = 192, B = 0), changes only in R

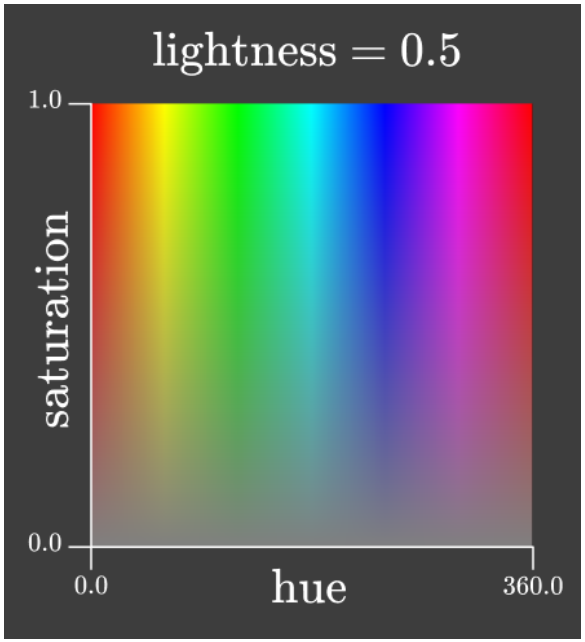
R = 5 R = 55 R = 105 R = 155 R = 205 R = 255

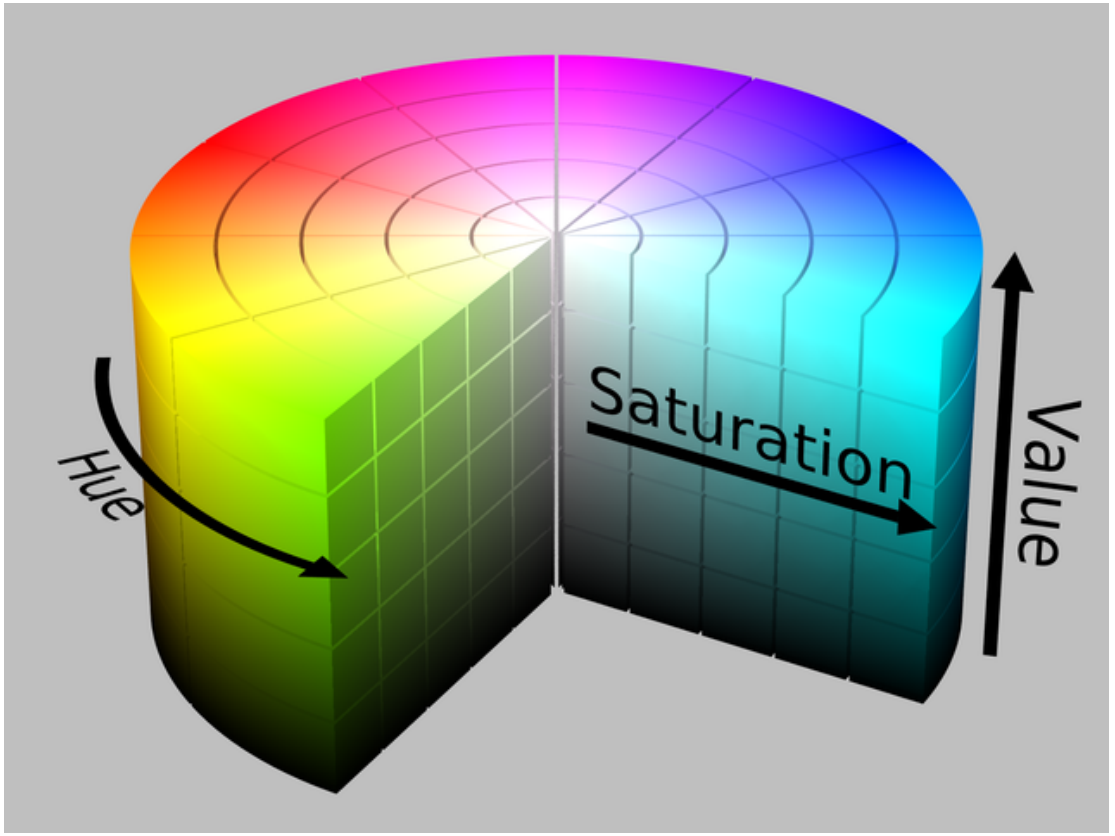
Properties of color spaces

	Intuitive	Perceptually uniform
RGB	✗	✗
HSL / HSV		
CIE Lab		
CIE LCh / HCL		

HSL / HSV

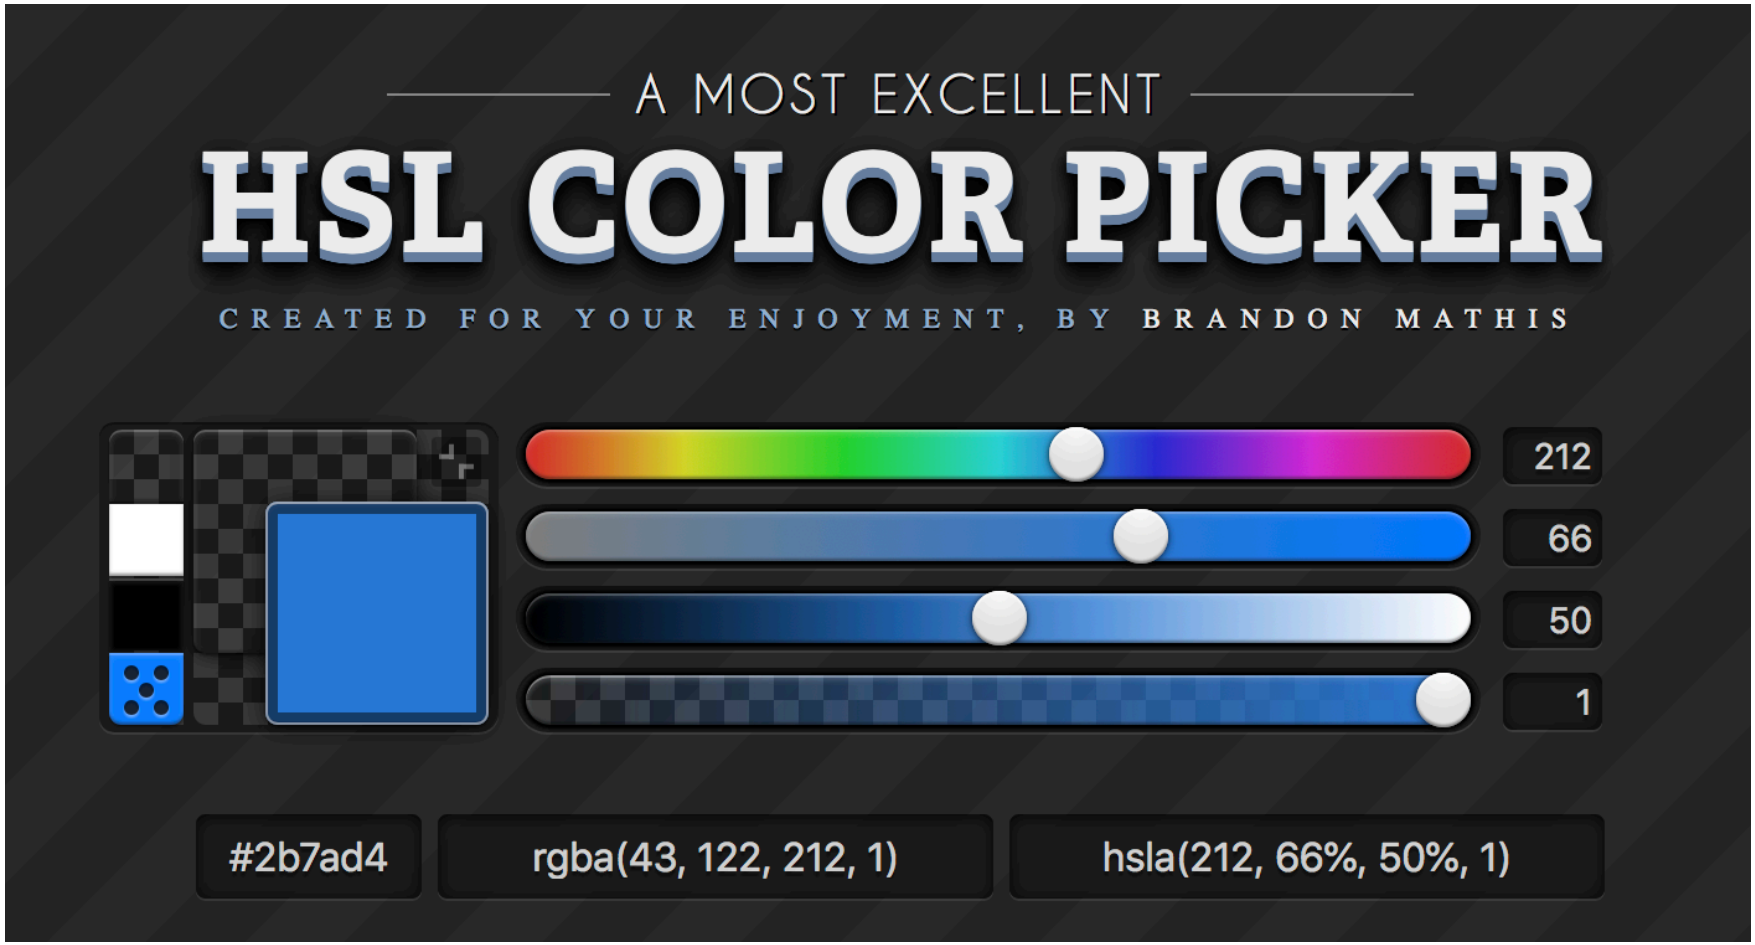
- H = hue
- S = saturation
- L/V = lightness/value





https://en.wikipedia.org/wiki/HSL_and_HSV
http://jamie-wong.com/post/color/

HSL / HSV



A MOST EXCELLENT
HSL COLOR PICKER
CREATED FOR YOUR ENJOYMENT, BY BRANDON MATHIS

Color use

Color use

Color maps

Semantics of color

Color blindness

Importance of size

Importance of contrast

Importance of background

Importance of surrounding color

Data attributes

- Ordered
  - *Ordinal*
  - *Quantitative*

- Ordering Direction
  - Sequential
  - Diverging

1, 2, 3, …
small, medium, large

…, -2, -1, 0, 1, 2, …
neg., neutral, pos.

- Categorical

Color maps

Sequential color maps

Diverging color maps

Categorical color maps

Bivariate color maps

Sequential color maps

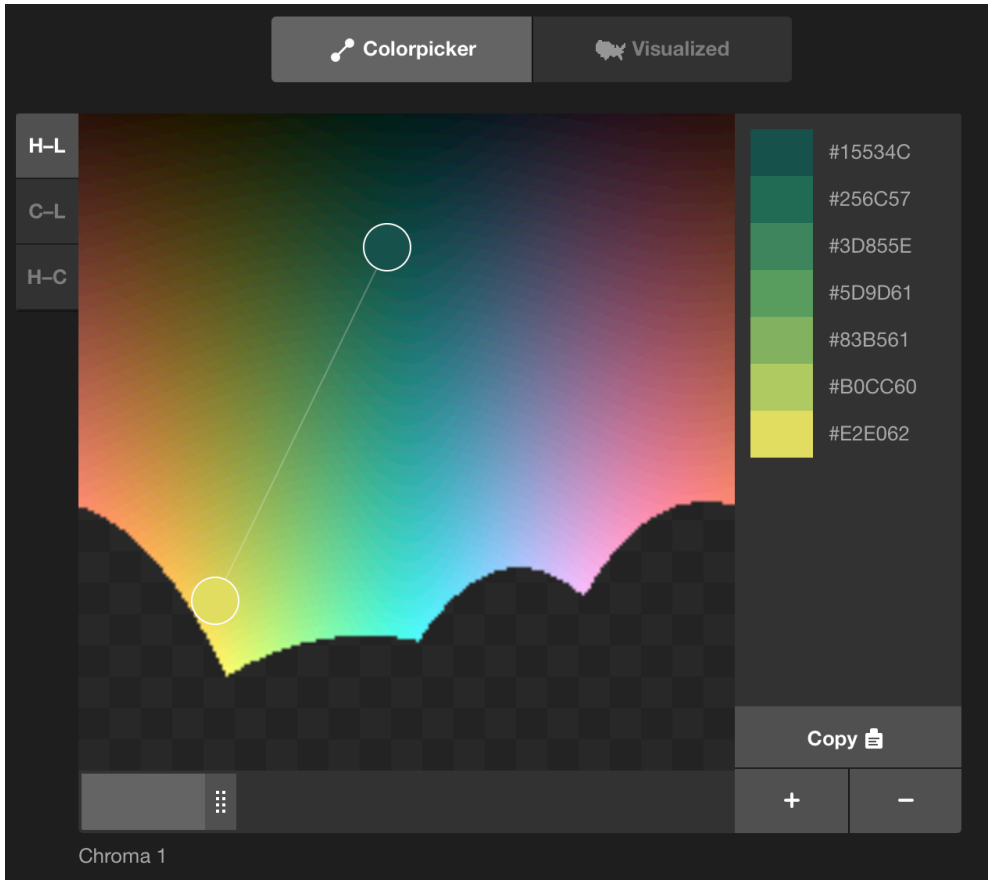
Desired properties

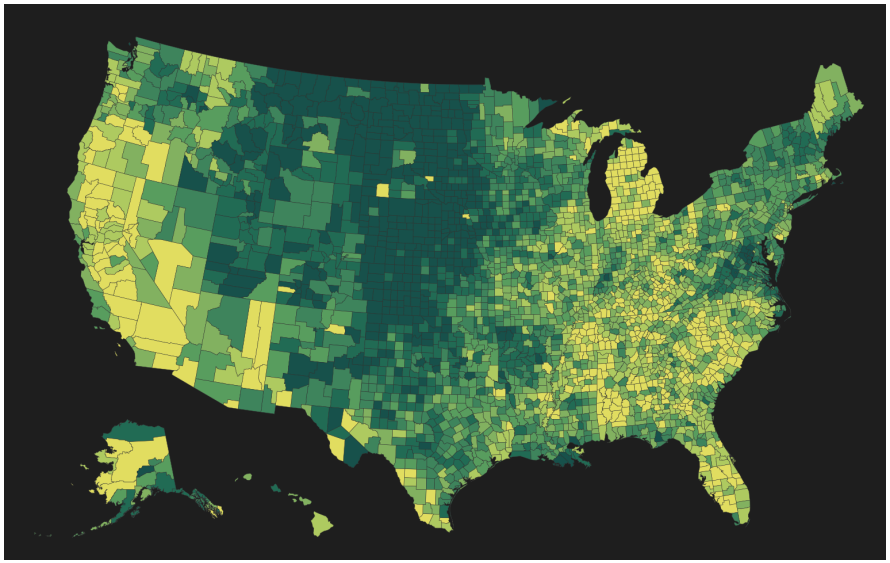
- Perceived differences correspond to value differences
- High discriminability

Single hue

Multi-hue

Sequential color maps



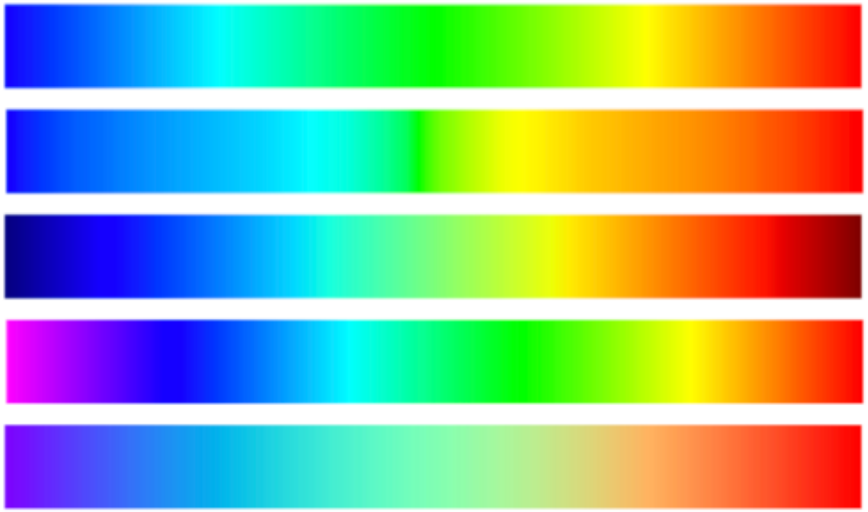


http://tristen.ca/hcl-picker/

Sequential color maps: rainbow

Do not use it!

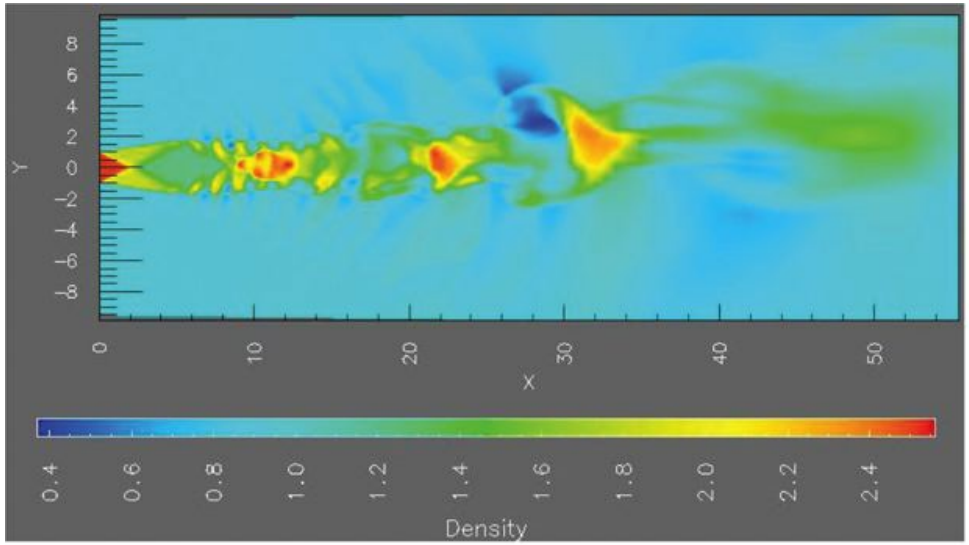
- Hue (that has no perceptual order) is used to indicate order
- Perceptual nonlinearity: divisions between hues create edges in visualization that have nothing to do with the data

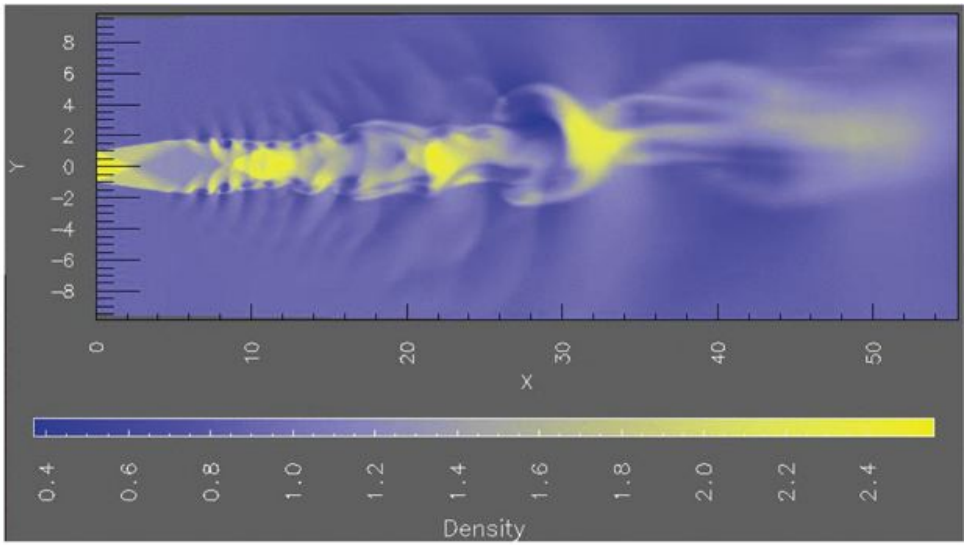


Sequential color maps: rainbow

Do not use it!

- The details are harder to see
- Only advantage: Colors can be easily named
- Overused because chosen as the default color map on many software



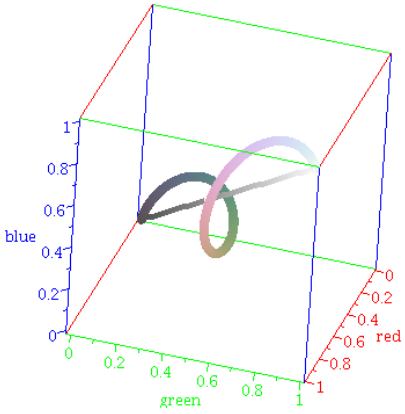


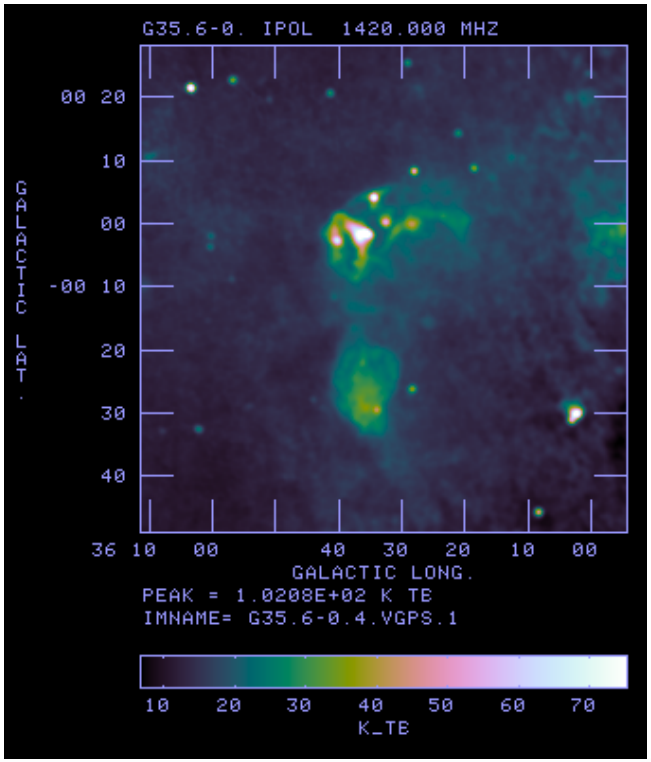
Sequential color maps

Cubehelix

- Continuous increase in lightness
- Named colors
- Suitable for grayscale printing (scientific papers)

A color map generator





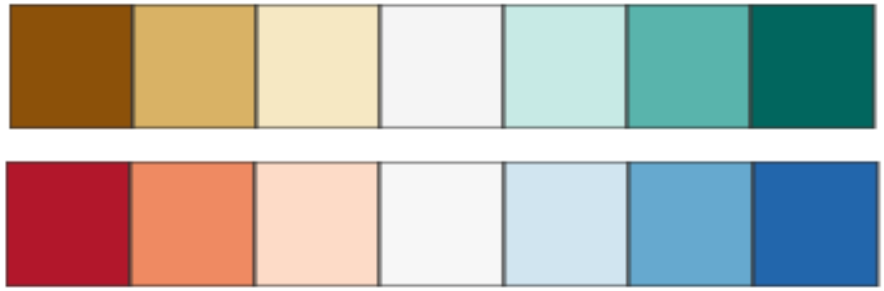
Diverging color maps

Encode two properties at the same time

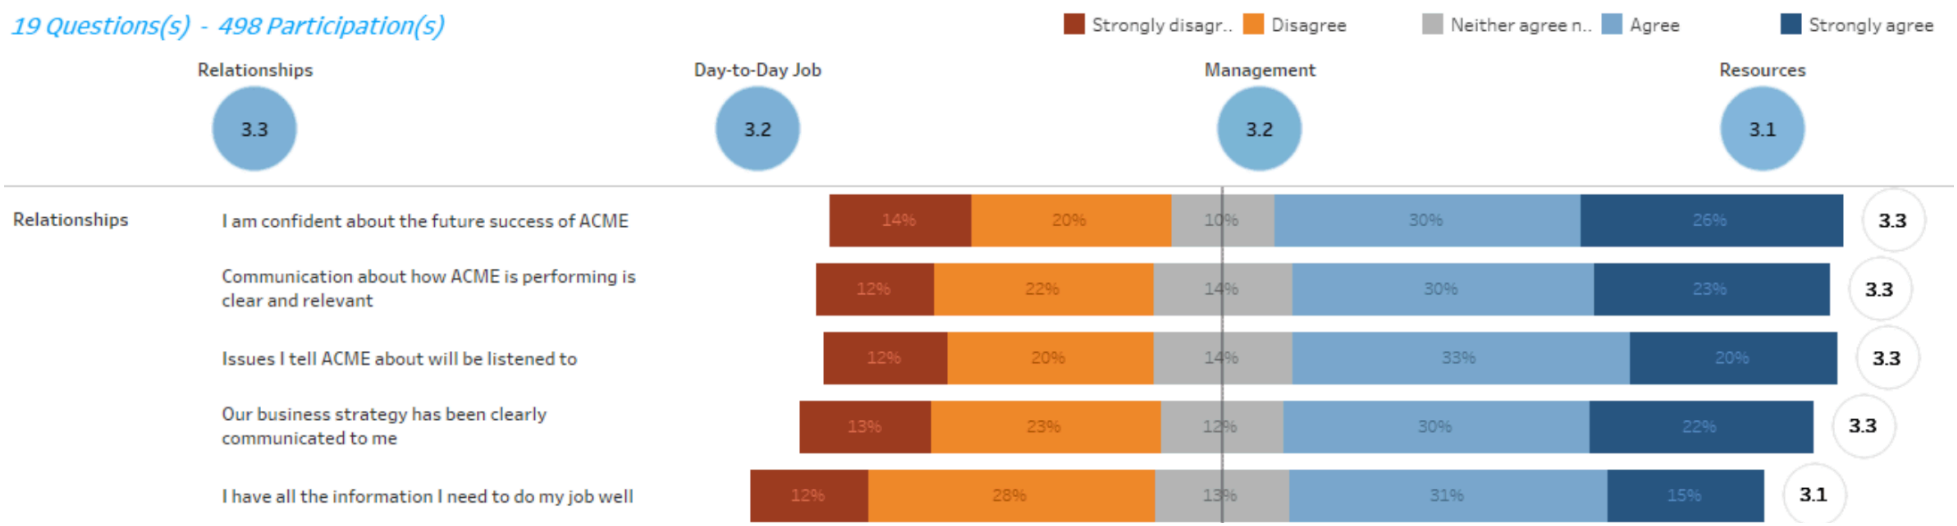
- Above/below threshold (usually zero)
- Magnitude above/below threshold

Desired properties

- Perceived differences correspond to value differences
- High discriminability
- Same luminance “ramp” on both sides



Diverging color maps



https://linpack-for-tableau.com/tableau-dashboard/survey-dashboard/

Categorical color maps

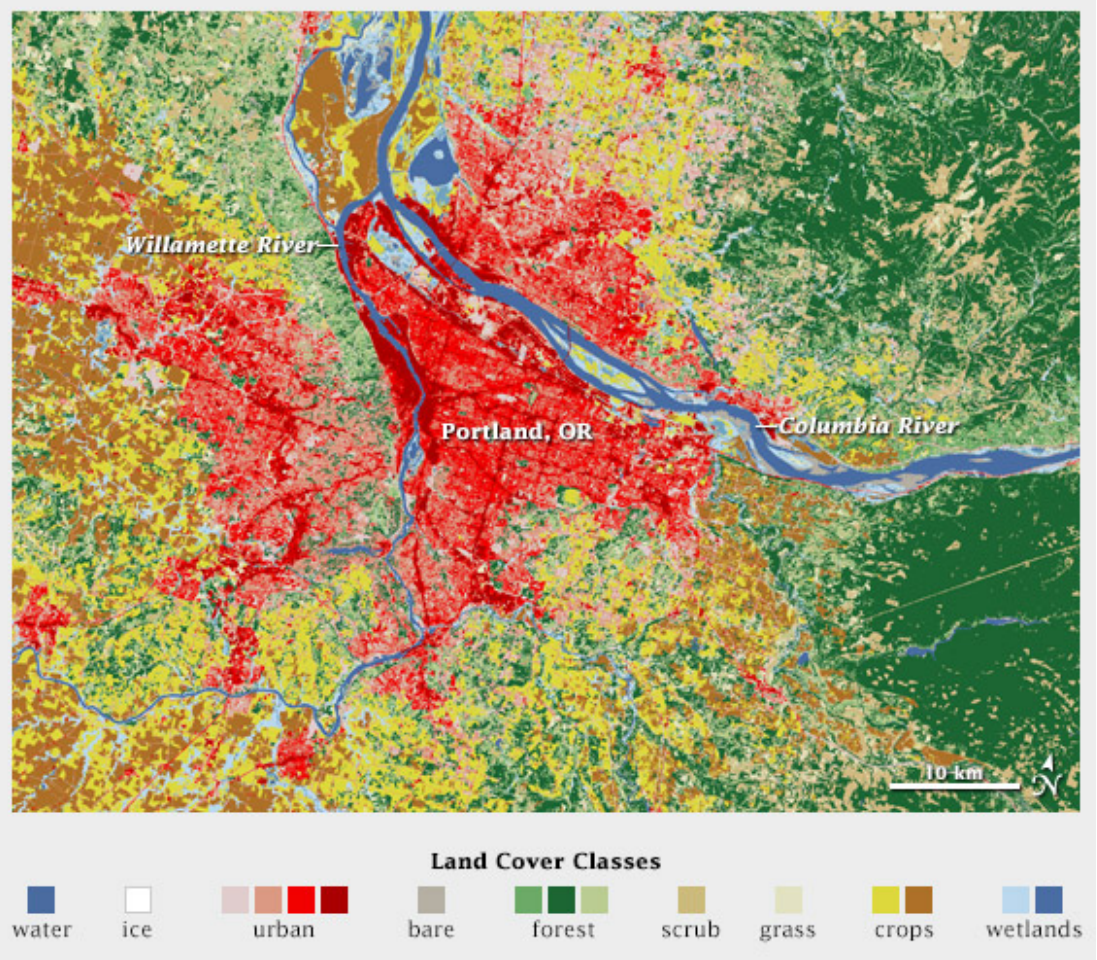
Desired properties

- Uniform saliency (nothing stands out)
- High discriminability

Use colors that can be named

Do not use too many different colors/categories

Categorical color maps



https://earthobservatory.nasa.gov/blogs/elegantfigures/2013/08/

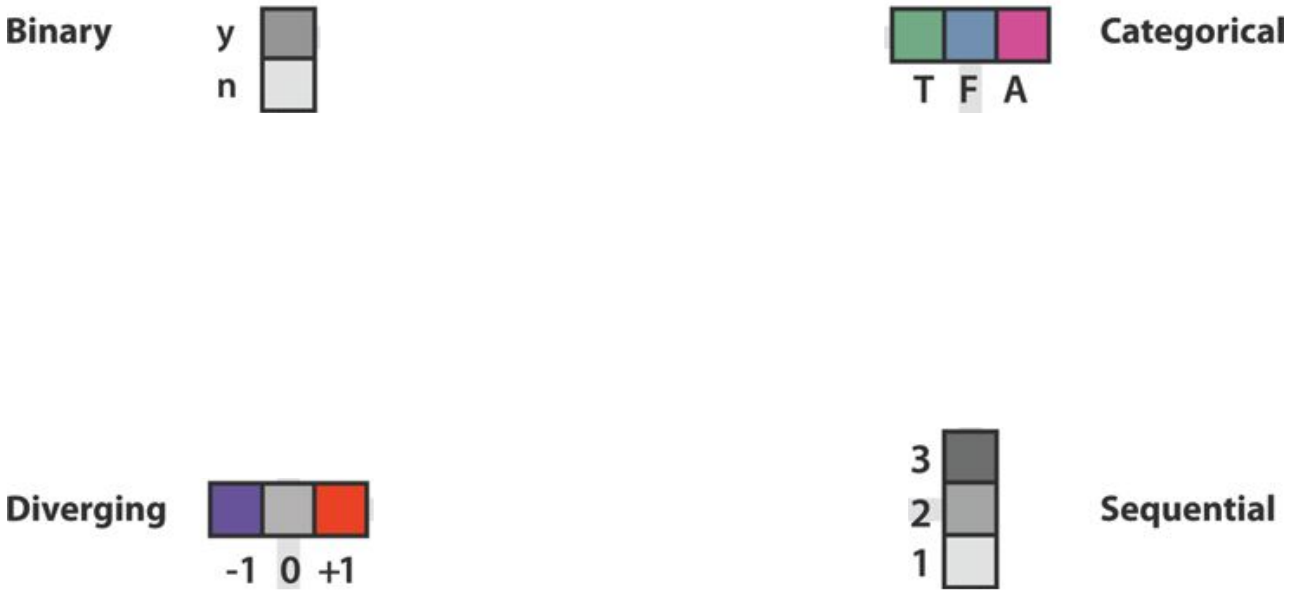
Univariate color maps

Sequential color maps

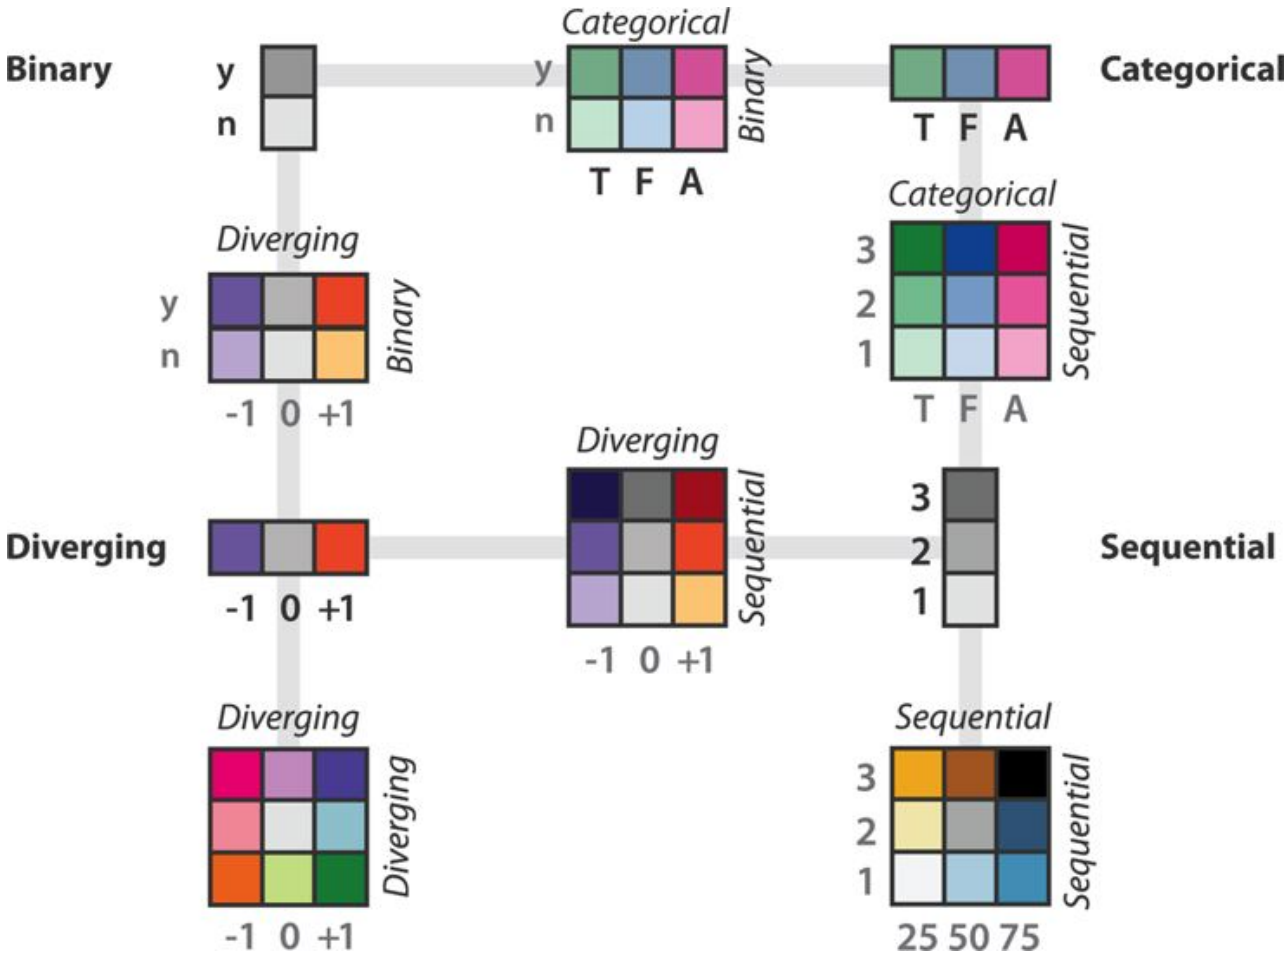
Diverging color maps

Categorical color maps

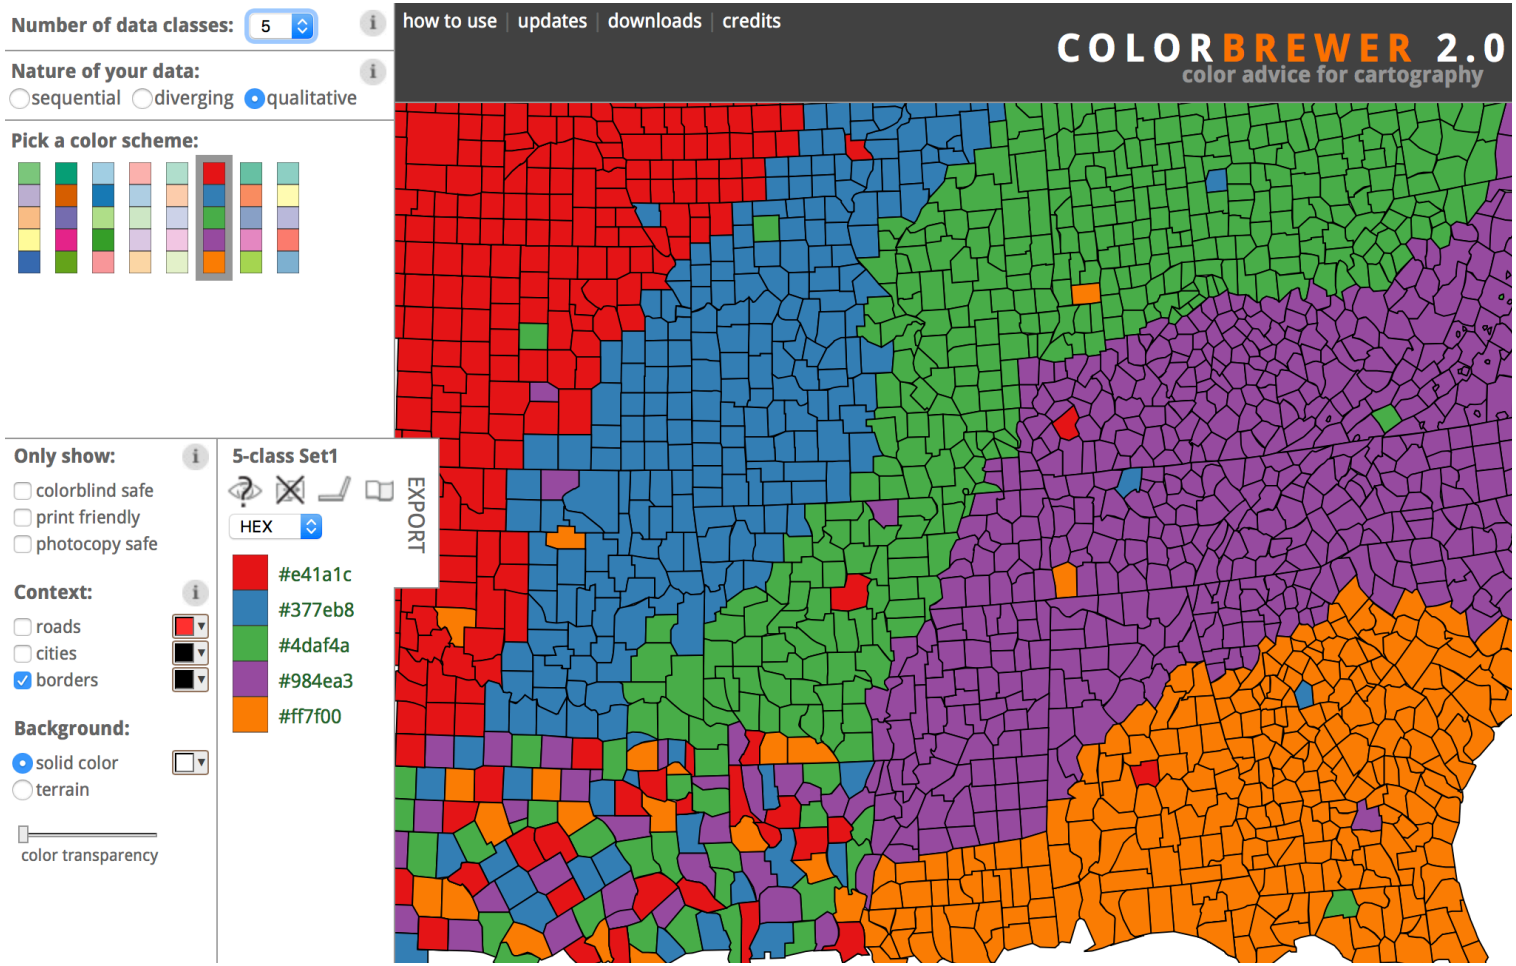
Bivariate color maps



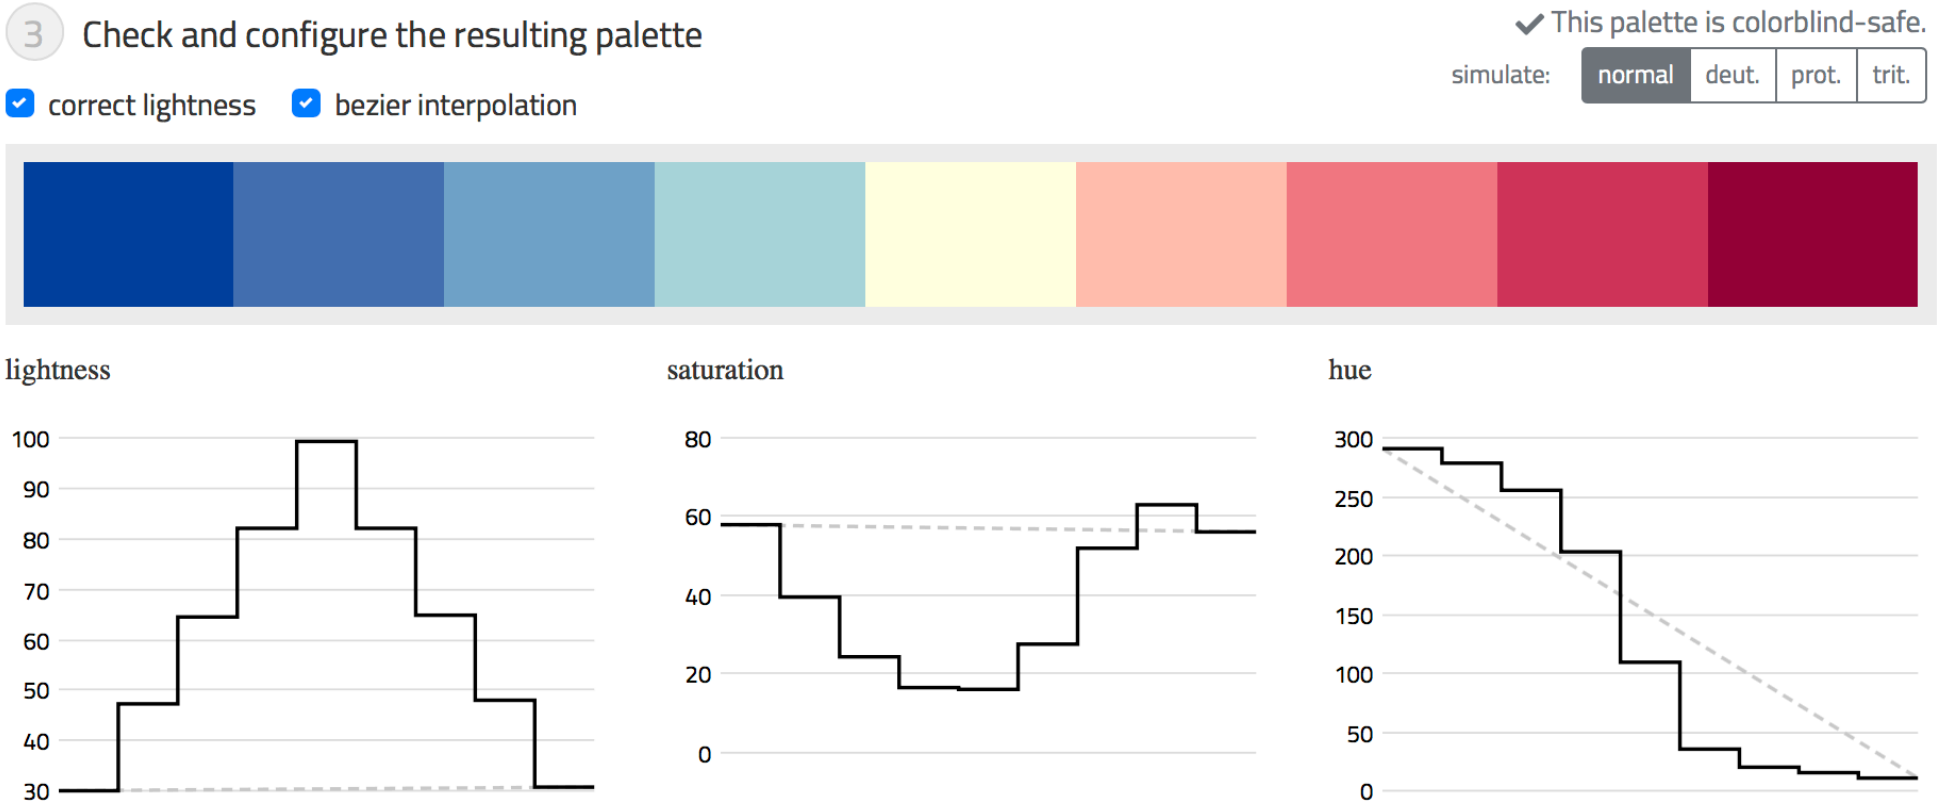
Bivariate color maps



Existing color maps



Custom color maps



https://gka.github.io/palettes/

Semantics of color

Green = good

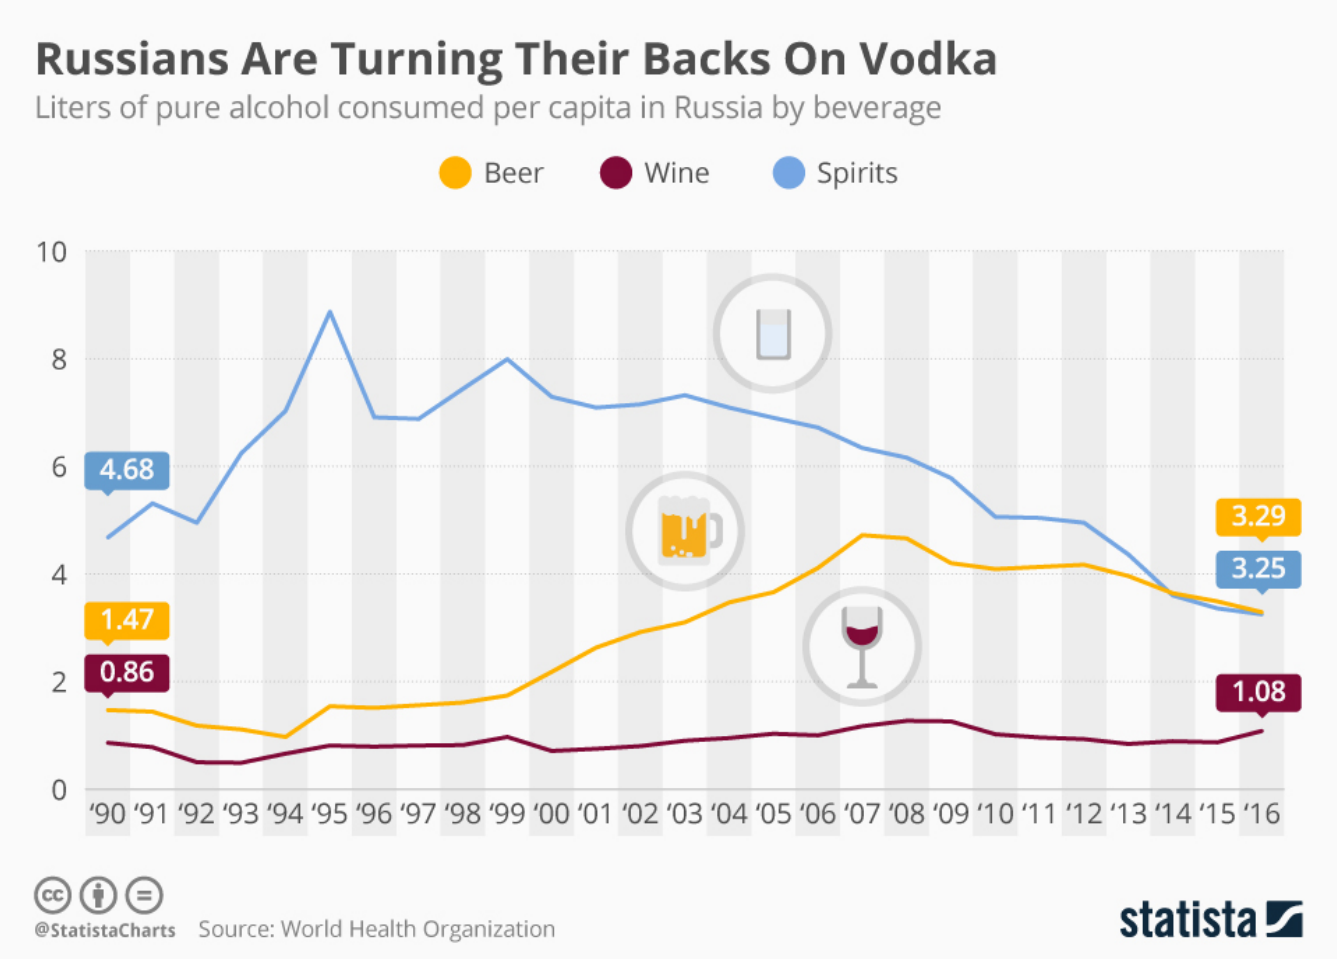
Red = bad

Gray perceived as “no color”

- Missing data
- Uncategorized data
- Non-emphasized data

Very powerful when used appropriately

Semantics of color



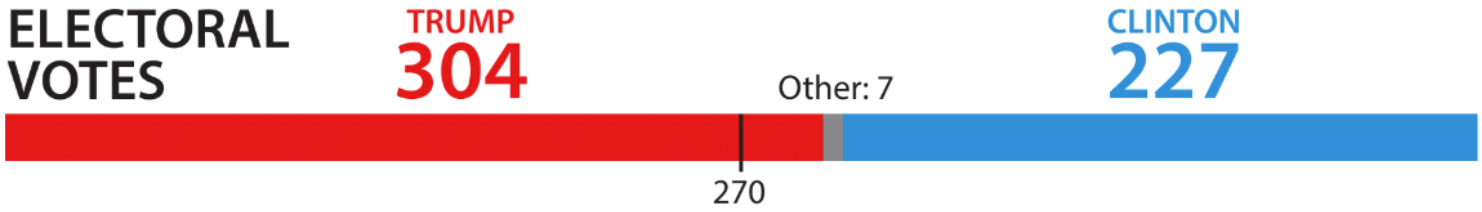
https://www.statista.com/chart/15918/liters-of-pure-alcohol-consumed-per-capita-in-russia/

Semantics of color

Use color consistently

Example from US politics

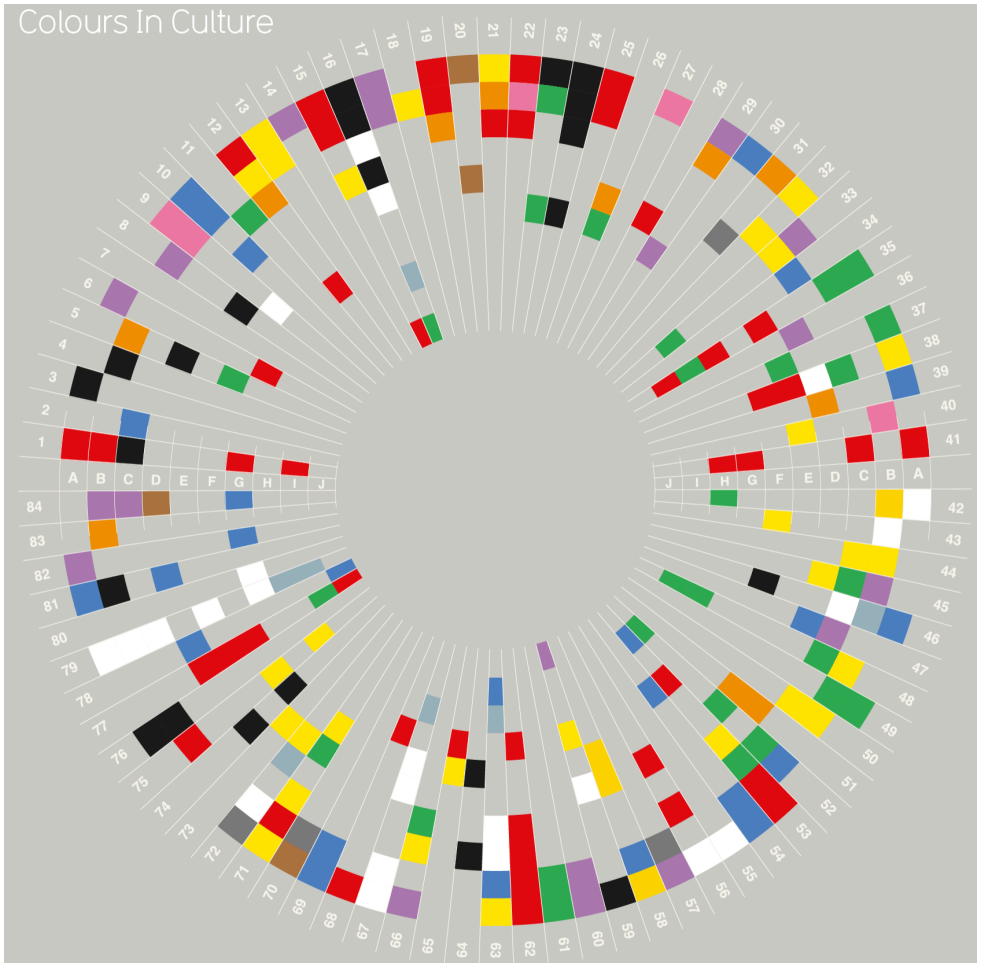
- Republicans = red
- Democrats = blue



Semantics of color

Meaning changes depending on culture

A Western / American
B Japanese
C Hindu
D Native American
E Chinese
F Asian
G Eastern European
H Arab
I African
J South American



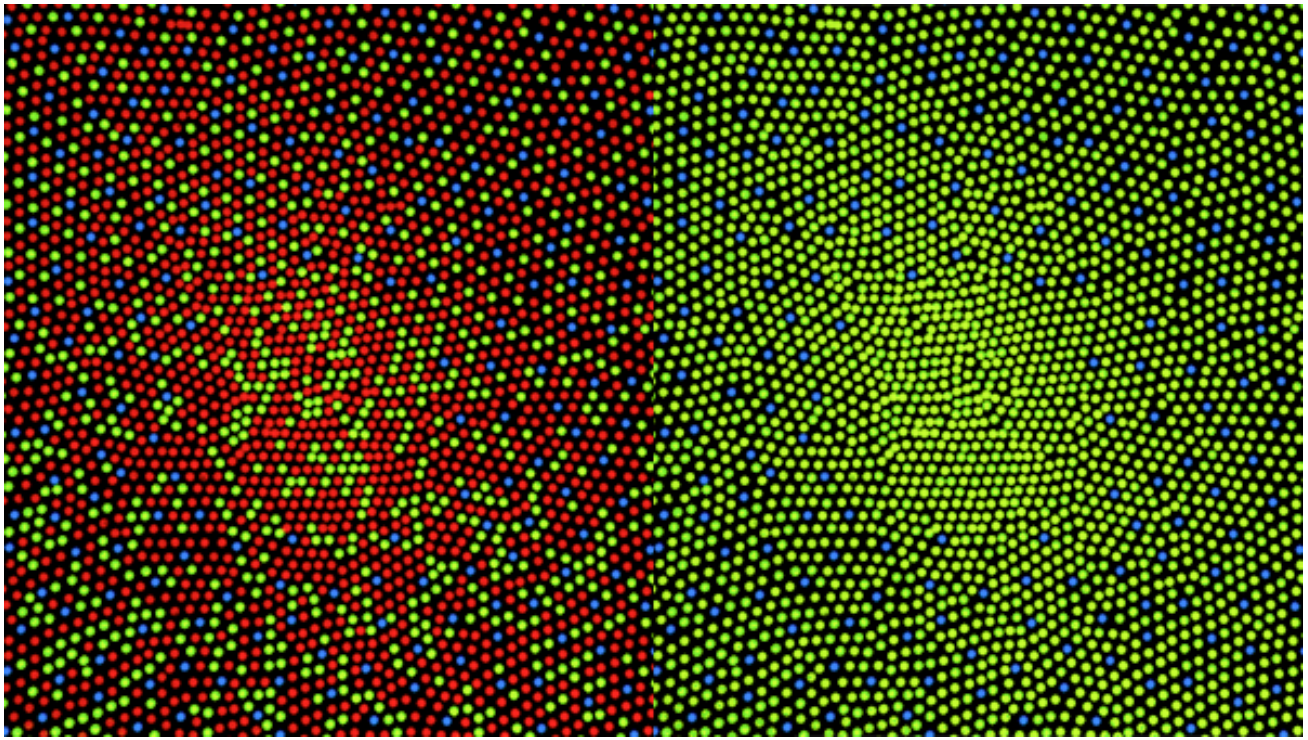
https://informationisbeautiful.net/visualizations/colours-in-cultures/

Semantics of color

Floor of a children's hospital

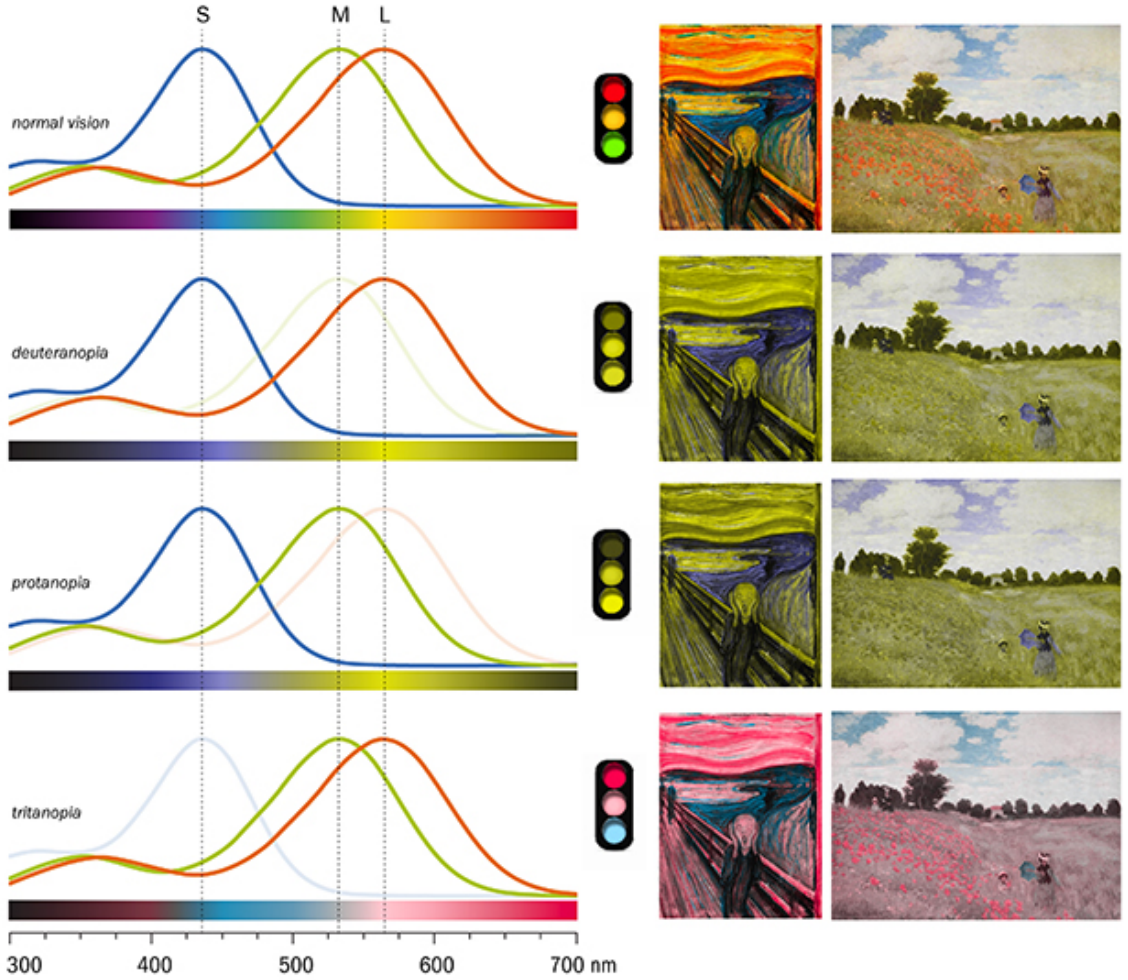
Color blindness

Red-green color blindness affects up to 8% of males and 0.5% of females of Northern European descent



https://en.wikipedia.org/wiki/Color_blindness

Color blindness



Normal vision

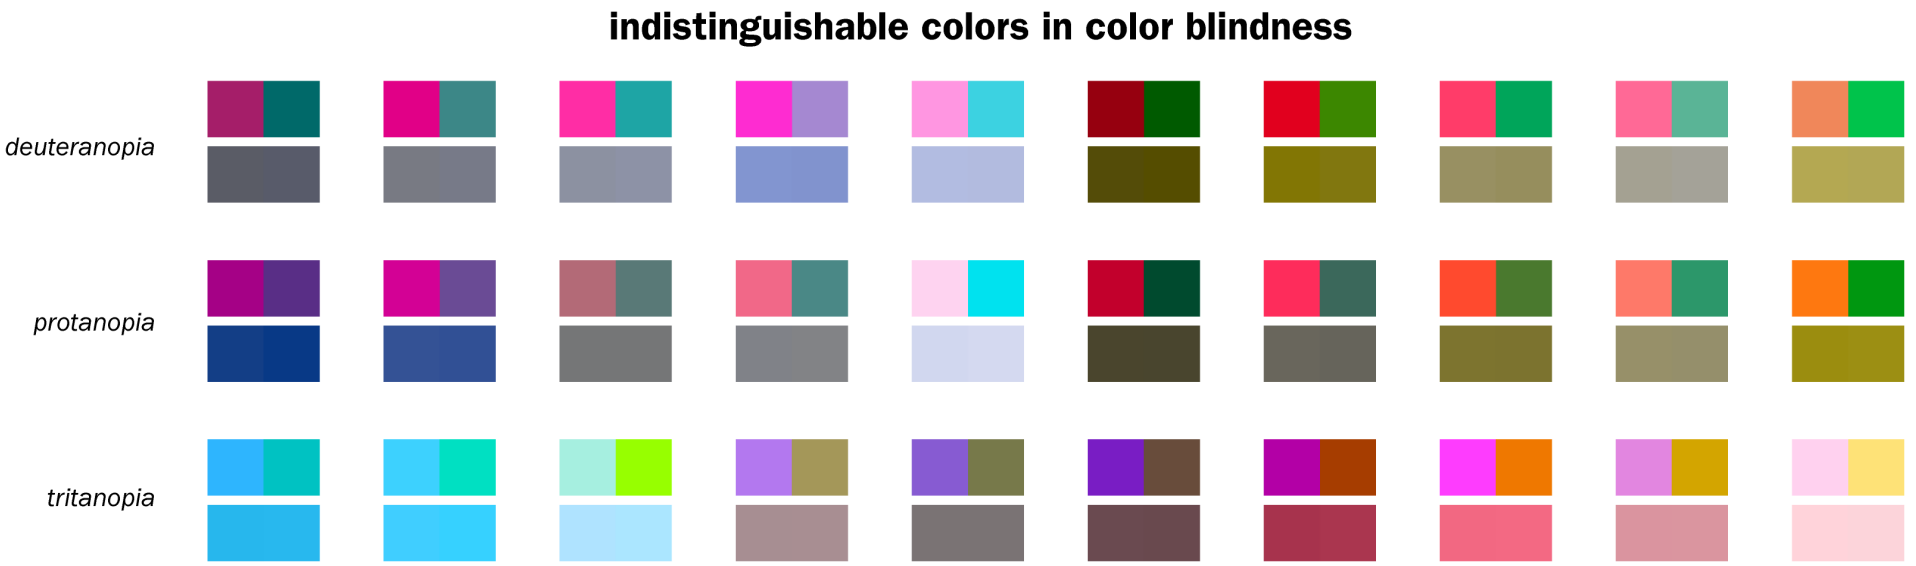
Deuteranopia

Protanopia

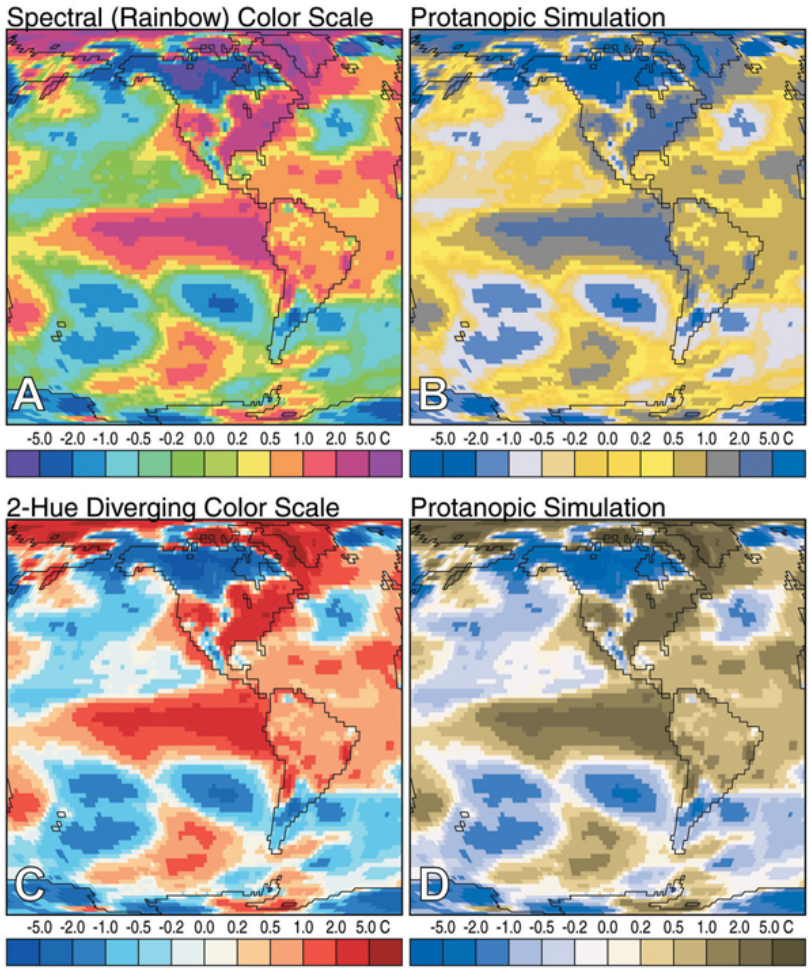
Eritanopia

http://mkweb.bcgsc.ca/colorblind/

Color blindness



Color blindness



https://visual.ly/blog/rainbow-color-scales/

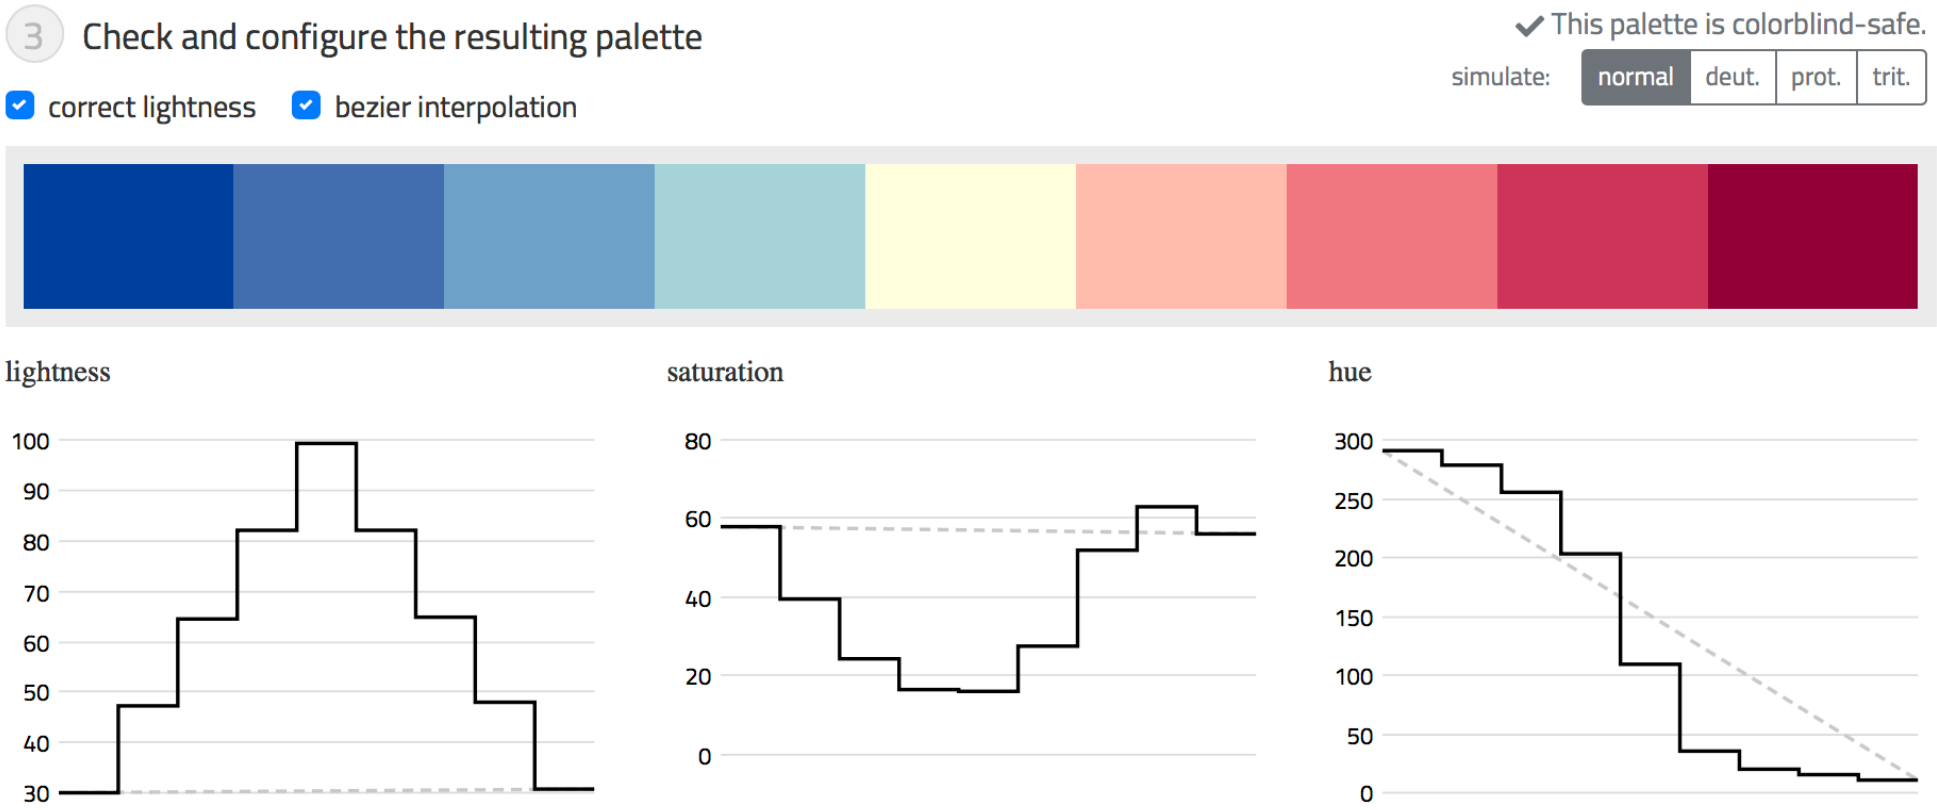
Color blindness

Color	Color name	RGB (1–255)	CMYK (%)	P	D
	Black	0, 0, 0	0, 0, 0, 100		
	Orange	230, 159, 0	0, 50, 100, 0		
	Sky blue	86, 180, 233	80, 0, 0, 0		
	Bluish green	0, 158, 115	97, 0, 75, 0		
	Yellow	240, 228, 66	10, 5, 90, 0		
	Blue	0, 114, 178	100, 50, 0, 0		
	Vermillion	213, 94, 0	0, 80, 100, 0		
	Reddish purple	204, 121, 167	10, 70, 0, 0		

Wong, B. (2011) Points of view: Color blindness. Nature Methods 8:441.

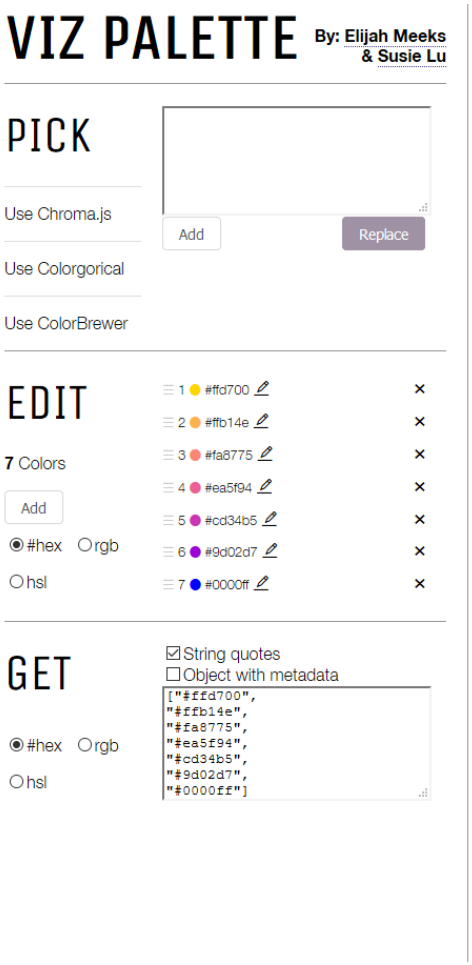
See also tools from https://www.color-blindness.com/2008/12/23/15-tools-color-blindness/

Color blindness



https://gka.github.io/palettes/

Color blindness



Color blindness

Use colorblind safe palettes

Blue/orange and blue/red normally safe

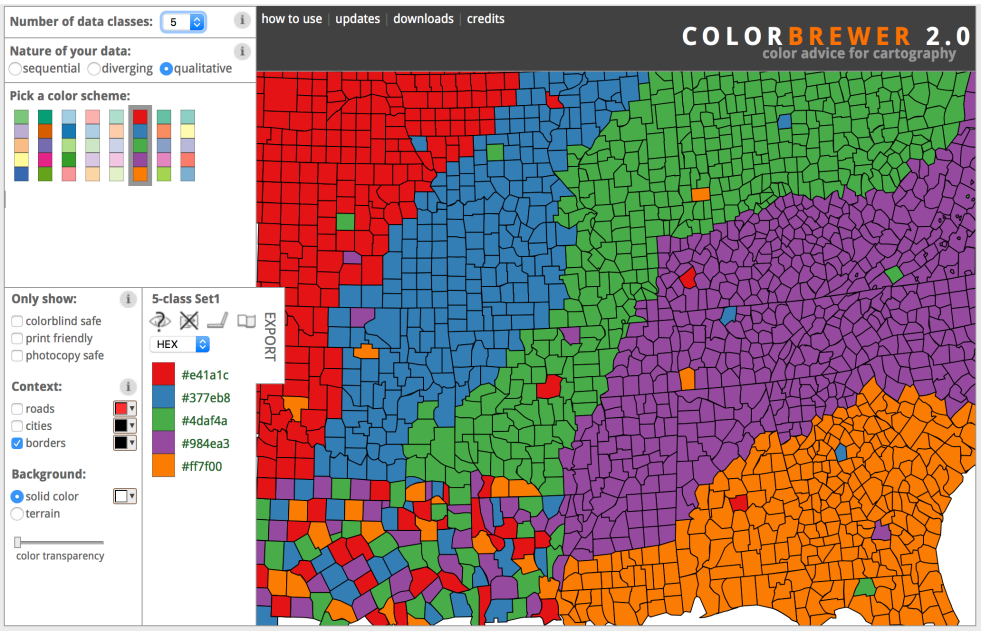
Test design with color blindness simulators

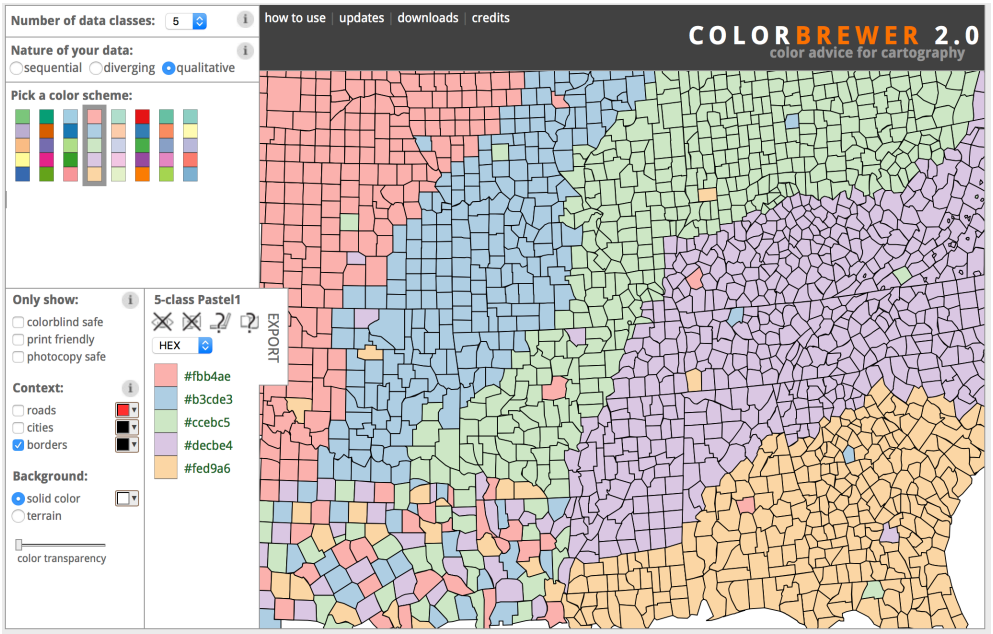
Importance of size

Small size hurts discriminability

Small area ➡ high saturation

Large area ➡ low saturation



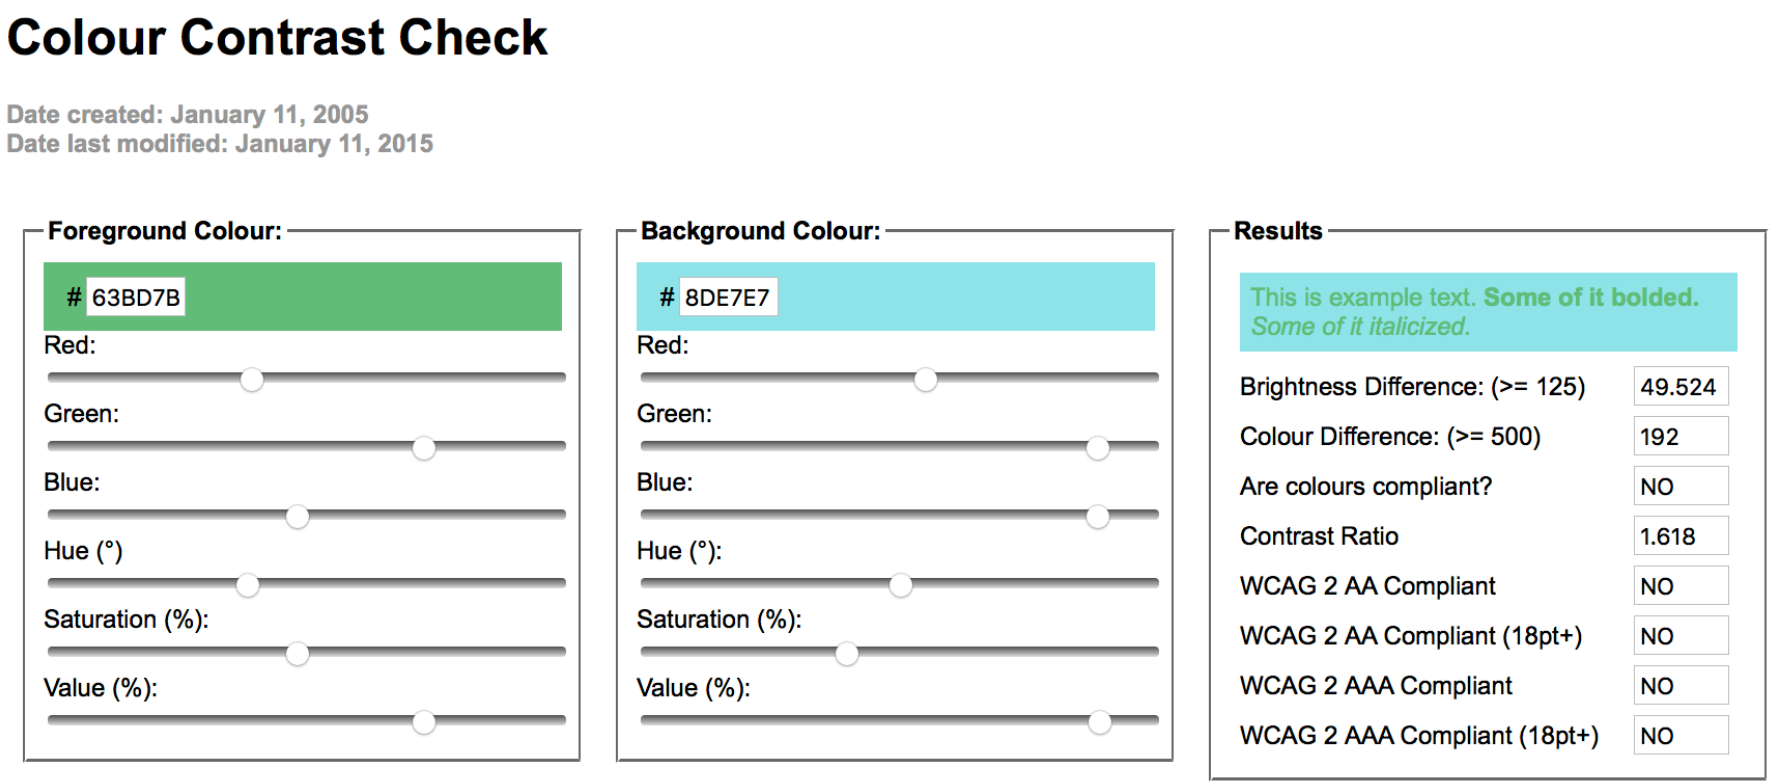


Importance of contrast

Contrast is most easily changed using luminance/lightness

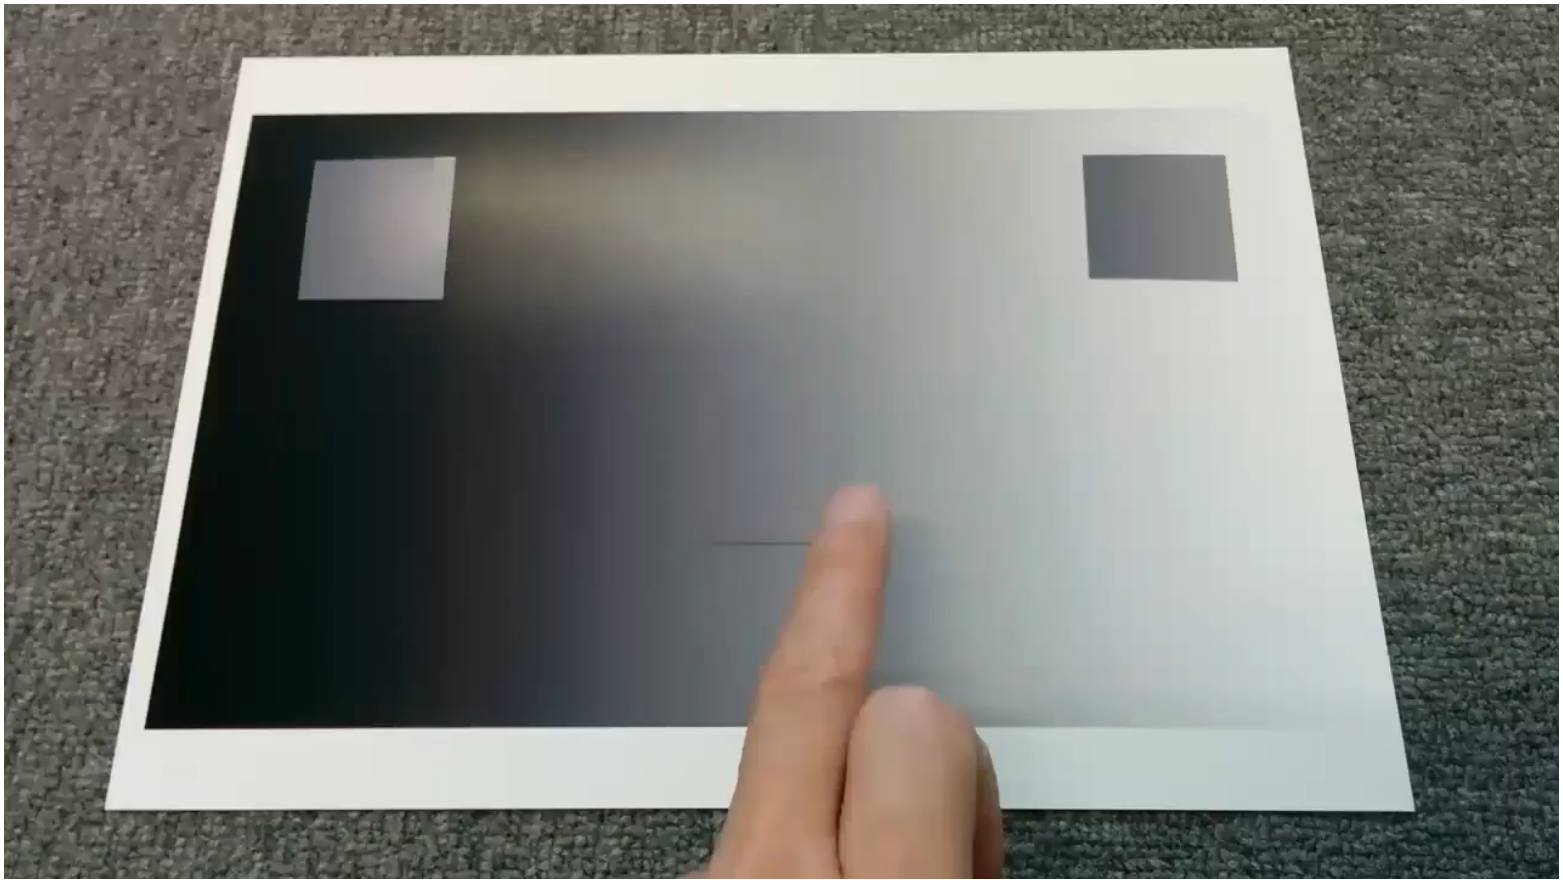
https://blog.datawrapper.de/colors/

Importance of contrast



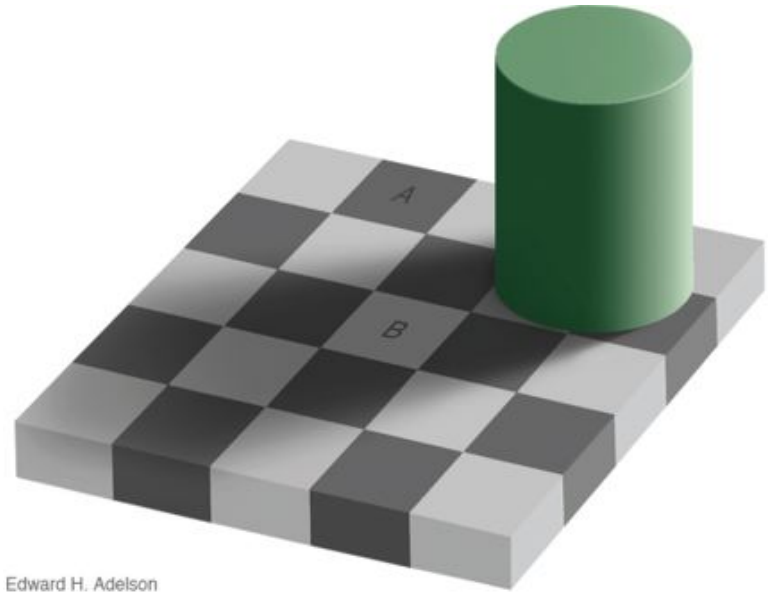
https://snook.ca/technical/colour_contrast/colour.html#fg=63BD7B,bg=8DE7E7

Importance of background

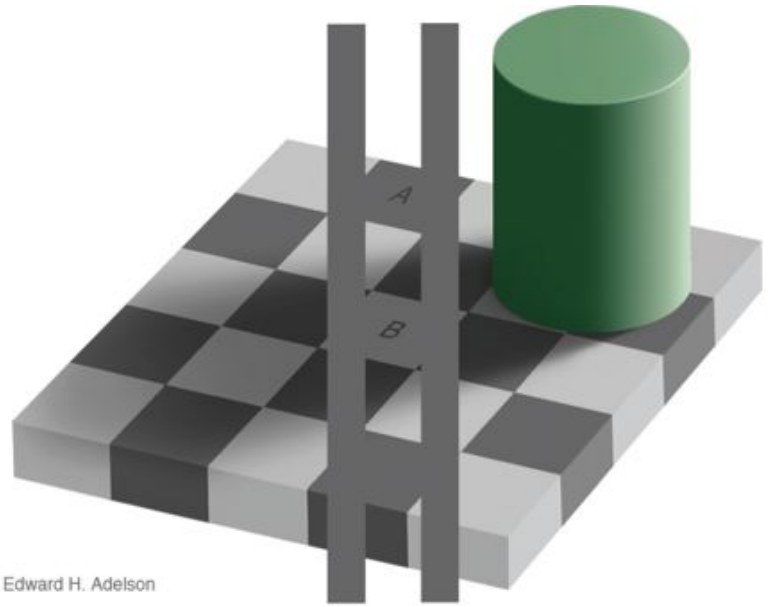


https://twitter.com/AkiyoshiKitaoka/status/1028473566193315841

Importance of surrounding color



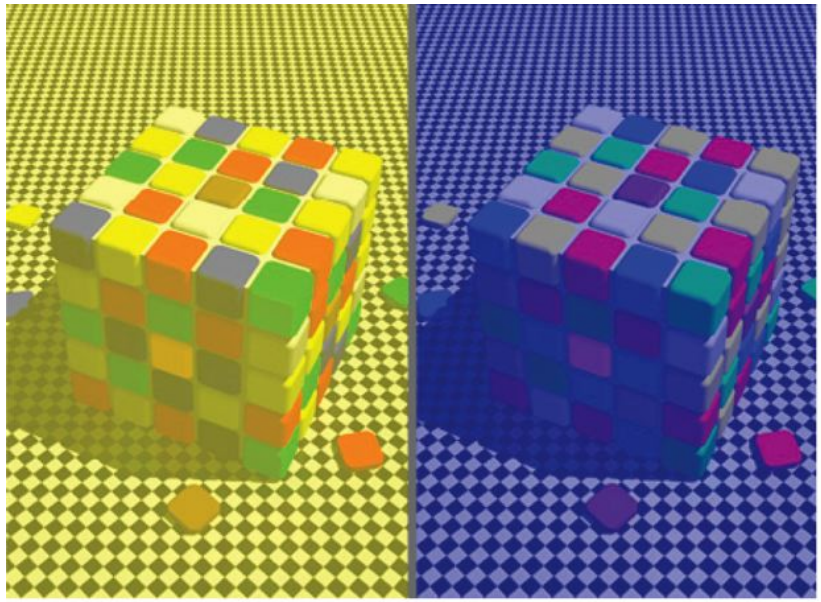
Edward H. Adelson



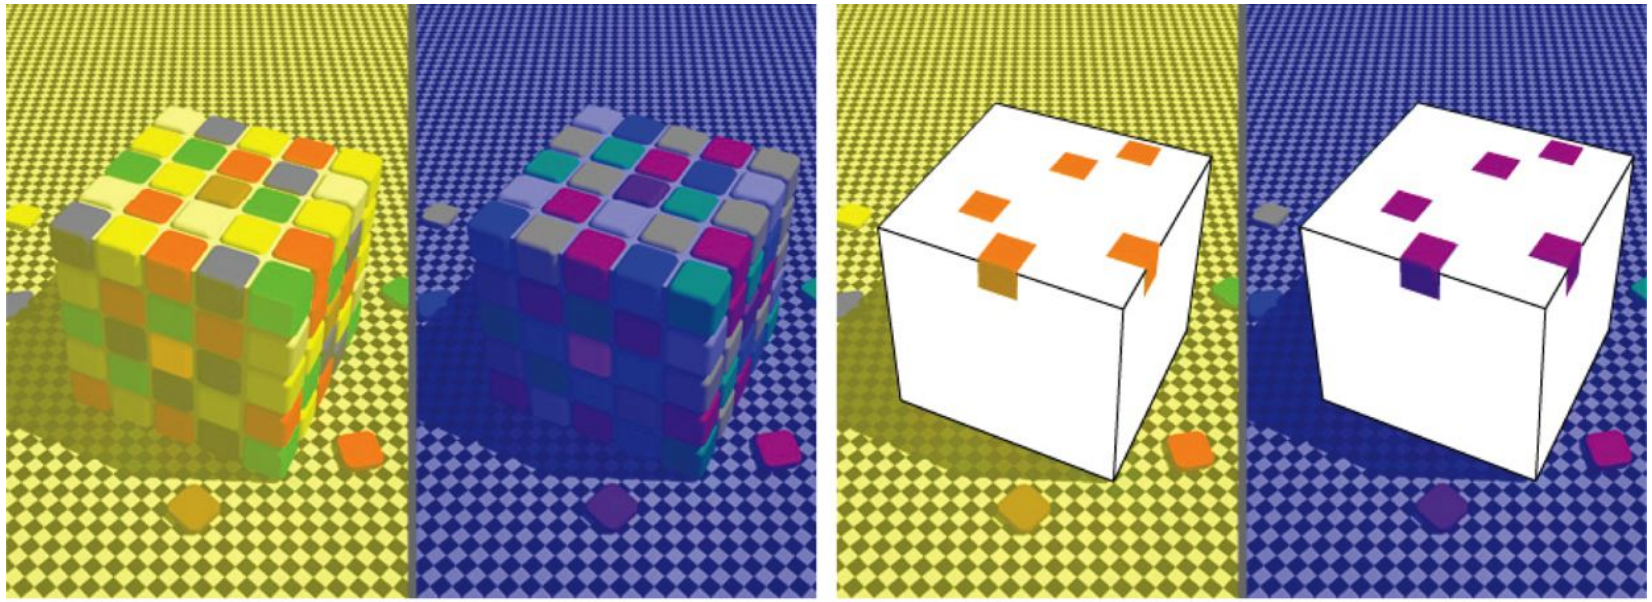
Edward H. Adelson

Importance of surrounding color

Importance of surrounding color



Importance of surrounding color



Color use summary

Use color sparingly

Use color consistently

Be thoughtful of the tone that color conveys

- Enforce emotions
- Consider culture

Design with colorblind in mind

Keep in mind the effect of contrast, background color and surrounding color

Color use summary

Colorbrewer is your friend!
