

INTERPRETATION OF SEISMIC REFLECTION

(cod.: "950 SM")

Course for

Laurea Magistrale in Geoscienze

teacher: Anna Del Ben

A.A. 2020-21

INTERPRETAZIONE di DATI SISMICI a RIFLESSIONE

- Orario del corso:
 - Martedì 9,00-11,00
 - Giovedì 9,00-11,00
- Organizzazione del corso:
 - 4 CFU lezioni frontali/su piattaforma digitale
 - 2 CFU esercitazioni
- Contributi da personale esterno: esperti OGS et al.
- Reperibilità per chiarimenti e spiegazioni:
 - 11,00-13,00 martedì e giovedì
 - temporaneamente via e-mail
- Modalità d'esame: esame orale (interpretazione e discussione di un profilo sismico, relazione sul lavoro fatto durante le esercitazioni, contenuti teorici del corso)
 - data da concordare*
- Contenuti del corso ...
- Bibliografia ...

CONTENUTI SINTETICI DEL CORSO

- **DATI DISPONIBILI** in rete: Progetti ViDEPI e Virtual Seismic Atlas
- **ASSUNZIONI GEOFISICHE DI BASE:** Onde Riflesse e Rifratte, Legge di Snell, Iperbole di Riflessione, Principio di Huygens, Coefficiente di riflessione, Sismogrammi sintetici, Dati sismici *stack* e migrati, Costanti Elastiche, Risoluzione verticale, Risoluzione orizzontale, Fenomeni di *Tuning*
- **DISTURBI PRESENTI** nel DATO SISMICO : Multiple, Diffrazioni , Effetti di orizzonti pendenti, Effetti della Migrazione, *Pull-up* e *pull-down velocity* e conversione/migrazione in profondità di dati sismici
- **COLLEZIONE ED ANALISI DI DATI SISMICI** : Linee sismiche regionali, Maglia linee sismiche e loro Intersezioni, Attributi Sismici, Sismica 3-D e 4-D, *Time Lapse*, Sismica 4C
- **TARATURA CON POZZI** : Utilizzo di pozzi stratigrafici per l'interpretazione sismica, *Sonic log*, etc
- **SISMOSTRATIGRAFIA** : *Unconformities*, Facies sismiche e modelli deposizionali , *Sequence* e *Seismic stratigraphy*, *System Tracts*, etc
- RICONOSCIMENTO SISMICO DI STRUTTURE DI **REEF, MARGINI DI PIATTAFORMA, PIATTAFORME ISOLATE**
- RICONOSCIMENTO E INTERPRETAZIONE SISMICA DI **PROCESSI HALOCINETICI**
- RICONOSCIMENTO DI **FAGLIE** E STILI TETTONICO-STRUTTURALI : Faglie normali, inverse e sistemi trascorrenti, Ricostruire il pattern delle faglie
- **SISMICA CROSTALE**: Caratteristiche sismiche di crosta continentale e oceanica , Progetti di Sismica Crostale (CROP, etc)
- INDICATORI SISMICI DELLA **PRESENZA DI FLUIDI** : *Bright* , *Dim* e *Flat spots*, Analisi di Porosità e Permeabilità,
- **SEMINARI** da parte di ESPERTI su *Bottom Simulating Reflector* (BSR), Stoccaggio CO₂, etc
- **ESERCITAZIONI** con software Petrel: Picking di riflettori, Conversione in profondità, Mappatura di orizzonti e mappe isopache , Sezioni cronostratigrafiche, *Case history*

BIBLIOGRAPHY

- Lines and Newrick - **FUNDAMENTALS OF GEOPHYSICAL INTERPRETATION**
- Herron – **FIRST STEP IN SEISMIC INTERPRETATION**
- Yilmaz - **SEISMIC DATA ANALYSIS**
- Lindseth - **DIGITAL PROCESSING OF GEOPHYSICAL DATA - A REVIEW**
- Sheriff and Geldart - **EXPLORATION SEISMOLOGY**
- Anstey - **SEISMIC INTERPRETATION - The Physical Aspects**
- Avseth et al. - **QUANTITATIVE SEISMIC INTERPRETATION**
- Shaw, Connors and Suppe – **SEISMIC INTERPRETATION OF CONTRACTIONAL FAULT- RELATED FOLDS, AAPG Seismic Atlas, Studies in Geology, 53**
- AAPG Mem.26 - **SEISMIC STRATIGRAPHY - Application to Hydrocarbon Exploration**
- Emery and Myers - **SEQUENCE STRATIGRAPHY**
- Davies, Posamentier, Wood and Cartwright – **SEISMIC GEOMORPHOLOGY Application to Hydrocarbon Exploration and Production Geol. Soc. Sp. Publ., N.277**

Interpretation of Seismic Reflection

- It is fundamental in the research applied to the geoscience;
 - It furnishes information about:
 - geometries of stratigraphic sequences, structural and tectonic features,
 - seismic velocities,
 - lithological characteristics;
 - It gives a **geological meaning** to geophysical data, practically it represents a **geophysical inversion**.

Interpretation is telling the geologic story contained in seismic data. It is correlating the features we see in seismic data with elements of geology as we know them. The story is read from a book having many chapters, some of which are either illegible or unintelligible, and others are lost or yet to be written. And although the story doesn't always have a happy ending, only in its telling do we expand our knowledge.

—Interpreter Sam

- Interpretation should be **CONSISTENT** with the available (geological and geophysical) data → (*constraints matter*)
“Seismology is a subset of geophysics”.....
 - It is useful to reconstruction of:
2D sections, structural maps, fault systems, *slumping* and *seismic hazard*, retrodeformation, subsurface exploration for mineral and hydrocarbon research.
 - Ideal interpreter:
team of geologists/geophysicists/physicists with different skills
that works in synergy. ...*human intervention and computer HW and SW*
Furthermore: “*Interpretation is a combination of both art and science*”

VSA Virtual Seismic Atlas
Sharing the scientific interpretation of seismic data

Welcome to the Virtual Seismic Atlas.

FUNDRAISING: The VSA team are asking for your assistance to support an essential upgrade to our website. Please consider making a donation via the link below. Click on the link: [JUSTGIVING](#) to access our fundraising page. All donations greatly appreciated!

The VSA is a resource for sharing the geological interpretation of seismic data. By browsing freely through the site you will find seismic images and interpretations. And you can contribute your own research results, or those of others, to the VSA. There are many interesting facts, and we ask is that you respect the intellectual property rights of the contributors who have posted images on the site.

Use the site to view images of subsurface structures, submarine landscapes, the structure of oceanic water bodies and much more. You can search for packages of subsurface periods, rapidly contrasting geological environments, and explore the use of new technologies and cutting-edge technology and breaking research alongside historically important images of the subsurface.

The VSA is used by thousands of professionals each week. It's a great place to promote your own research, or that of others, and to keep up to date with the latest developments in the field. It's simple to enter new content and link to your research outputs or related publications.

Visit [contributors](#) new content. If you wish to post information or new seismic images on can set you up with editing permission. Find out more from the "About the VSA" link below.

ViDEPI Project
Visibility of petroleum exploration data in Italy

The ViDEPI project has been designed to make all the documents concerning Italian oil exploration easily accessible. The documentation concerns expired, and therefore public, mining permits and concessions, filed since 1957 with UNMIG, National Mining Office for hydrocarbon and geothermal energy of the Ministry for Economic Development.

Oil exploration in Italy is subject to the [Law n. 6 of 11 January 1957](#), which, among other things, regulates the foundation of UNMIG, National Mining Office for hydrocarbon and geothermal energy, [Directorate-general for mineral and energy resources](#), based at the Ministry for Economic Development with branch offices in Bologna, Rome and Naples.

Current regulations establish that operating oil Companies shall provide UNMIG with progressive technical reports on the activities carried out on their permits and concessions; the reports shall include copies of exemplifying documents, such as geologic maps, structural maps, final well logs, seismic lines, etc.

The law establishes that the filed documents shall become available to the public a year after the permit has expired. This has led to the creation of what is today, after 50 years, an important data base on our Country's subsurface.

Before the implementation of the ViDEPI project, the documentation was available only on paper and difficult to consult, arranged as it was on the basis of the mining concession in which it had been acquired and filed by the various UNMIG offices.

- Open Google Earth on your PC
- From a search engine get to the ViDEPI project site
- Click on "Maps" and than "Download KML files"
- Click on "1. Reconnaissance seismic campaigns of the offshore areas" and then on the bar at the bottom of the downloaded link: Google Earth will open with the positions of all the seismic profiles relating to
- Same procedure for CROP and other profiles (points 2, 3, 4) and wells (point 5 plus bar).
- Clicking on a profile or well, you can select to see the corresponding pdf file
