

SOME QUESTIONS

- What practices do you use for developing software?
- When dealing with a new project/problem, where do you start from?
- How is it to work on existing code?

Split the problem
Write code that is
easy to read

Understand the problem first
Subproblems that
are easier to solve

Comments to document what
the code does
Big mess

It depends on who
wrote the code and why

It depends on how old
the code is

Versioning system
Manual testing
