

Data Visualization

EXAMPLES (2)

Good visualization design is

1. Trustworthy

2. Accessible

3. Elegant

Diversity of ageing

Diversity of ageing (redesign)

Surprising variety in

Ageing

HOW HUMANS AGE

Example: Homo Sapiens Japanese, 2009

Rising MORTALITY

The probability to die of ageing stays fairly constant, but then rises rapidly with increasing age.

KILLER WHALE

Many animals show an ageing pattern similar to humans.

NEMA-TODE WORM

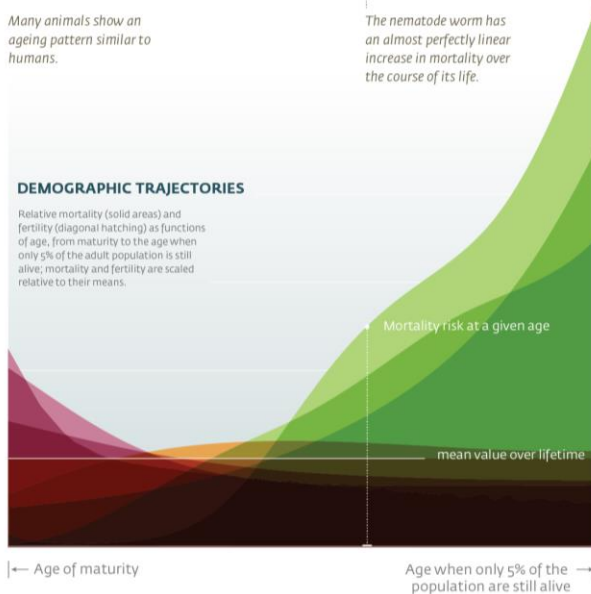

The nematode worm has an almost perfectly linear increase in mortality over the course of its life.

YELLOW BABOON

DEMOGRAPHIC TRAJECTORIES

Relative mortality (solid areas) and fertility (diagonal hatching) as functions of age, from maturity to the age when only 5% of the adult population is still alive; mortality and fertility are scaled relative to their means.

Constant MORTALITY

HYDRA

The hydra can live for centuries, fresh (and as fertile) as on day one.

GREAT TIT

For some animals, however, mortality risk does not change with age.

Declining MORTALITY

Some plants and animals are even less likely to die, the older they get!

To achieve accessibility

General guidelines

- Keep in mind
 - The audience
 - The presentation format
 - The specifics of the data
 - **The message**
- Strive for clarity, minimize clutter
- Take into account human visual processing abilities
 - Careful choice of colors
 - Use annotation
- Use uncommon charts only if they are “worth it”

To achieve accessibility

Design process guidelines

- Try different visualizations
- Show your visualizations to a friend—are they able to get to the message?
