Dipole moment and center of charge in molecules

For any molecule/cluster the dipole moment $\vec{\mu}$:

$$\vec{\mu} = \sum_{\alpha} q_{\alpha} \vec{r}$$

with α running on the atoms, q_{α} are the **charges** on atoms (Mulliken, Lowdin etc.) and \vec{r} are the **atomic coordinates**

For charged systems, the center of charge \vec{c} is:

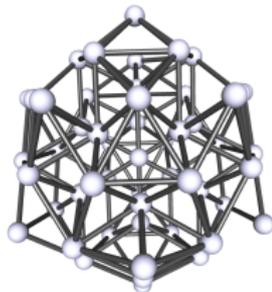

$$\vec{c} = \frac{\sum_{\alpha} q_{\alpha} \vec{r}}{\sum_{\alpha} q_{\alpha}}$$
