2021-2022**

**Marine Biodiversity and global change
Prof. Stanislao Bevilacqua (sbevilacqua@units.it)**

**Intertidal and subtidal rocky
habitats**

Intertidal rocky reefs

Reduced diversity

Barnacles, littorinids, limpets, cyanobacteria, anthozoans, algae (encrusting, turf). In enriched waters, mussels.

Harsh environmental conditions

due to air exposure, high temperature, hydrodynamism, so high physical disturbance

Intertidal rocky reefs

Cystoseira canopies

High biodiversity

Lithophyllum rims

Bioconstructions

Lithophyllum rims

A

B

Lithophyllum byssoides

Vermetid reefs

Vermetid reefs

Lithophyllum incrustans

Dendropoma (Novastoa) petraeum

Lithophyllum byssoides

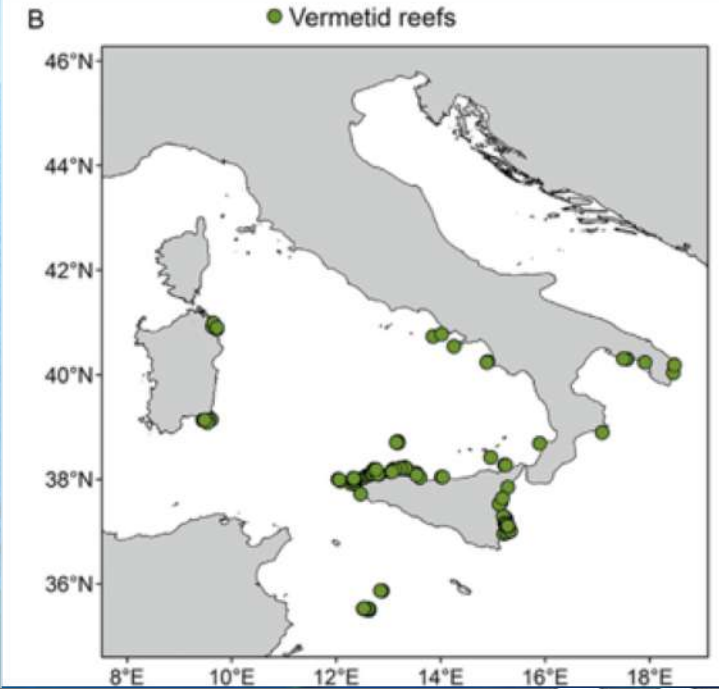

Neogoniolithon brassica-florida

Vermetid reefs

Distribution in Italy and the Mediterranean Sea

Subtidal macroalgal stands

Cystoseira s.l. forests

Fucales (*Ericaria*, *Gongolaria*, *Cystoseira*)

Subtidal macroalgal stands

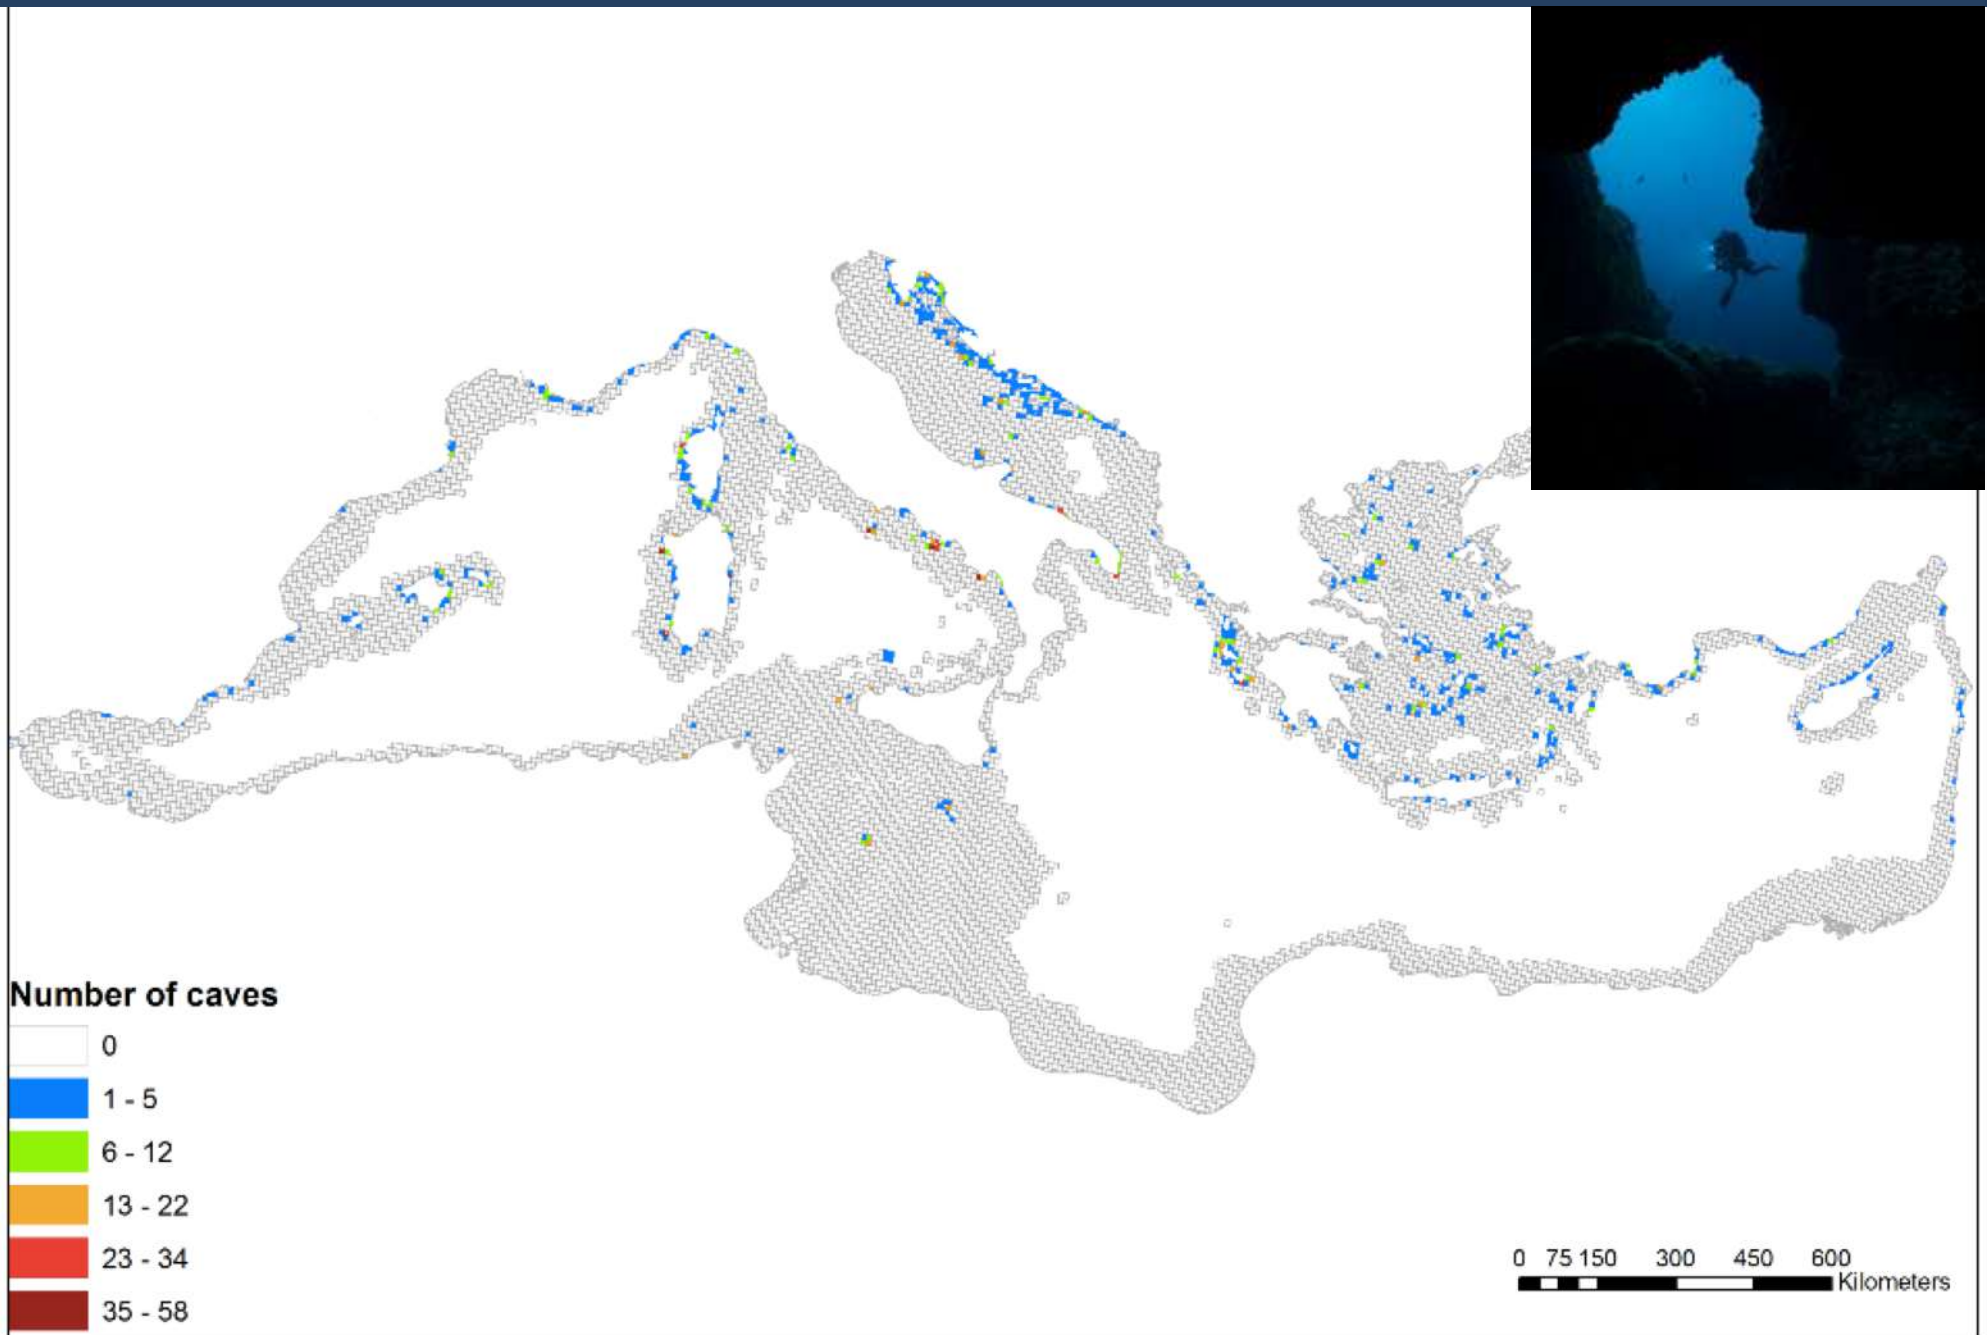

Subtidal rocky cliffs

Subtidal rocky cliffs

Submarine caves

Effects on fragile organisms

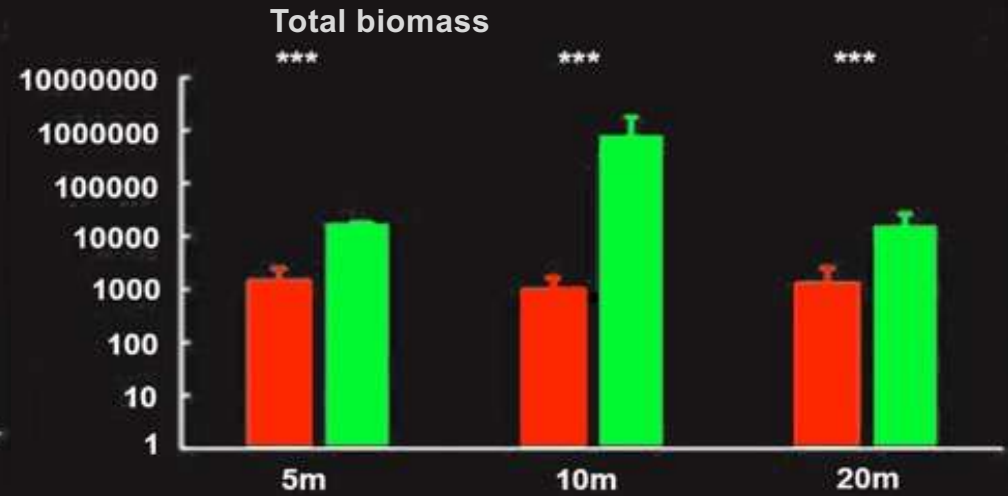

Diving frequentation in submarine caves. Effects on benthic invertebrates (Guarnieri et al., 2012)

Fish assemblages

Effects of overfishing

Appolloni et al., 2017.

Maintainance of depth structure in fish assemblages. Abundance-biomass patterns typical of healthy conditions

Main human threats

- Pollution
- Direct physical habitat disruption and artificialisation
- Overfishing
- Bioinvasions
- Climate change

Trends in cumulative impact

Climate drivers are the main contributors to increased cumulative impact to rocky reefs, but overfishing and pollution are also key drivers of increased Impact. Rocky reefs are impacted by the largest suite of different stressors

Ecological status

Bevilacqua et al., 2020

Coastal soft bottoms (CSB)

Rocky intertidal fringe (RIF)

P. oceanica beds (POS)

Shallow subtidal reefs (SSR)

Table 1
Summarized description and sensitivity levels of the main community categories distinguished in the monitored coasts

| Category | Description | Sensitivity level |
|----------------------------------|---|-------------------|
| <i>Cystoseira mediterranea</i> 5 | Continuous belt of <i>C. mediterranea/stricta</i> | 20 |
| <i>Cystoseira crinita</i> | Populations of <i>C. crinita</i> | 20 |
| <i>Cystoseira balearica</i> | Populations of <i>C. balearica</i> | 20 |
| <i>Cystoseira sheltered</i> | Populations of <i>Cystoseira foeniculacealbarbatalspinosa</i> v. <i>tenuior/compressav.pustulata</i> | 20 |
| <i>Posidonia</i> reef | Barrier and fringing reefs of <i>Posidonia oceanica</i> | 20 |
| <i>Cymodocea nodosa</i> | <i>Cymodocea nodosa</i> meadows | 20 |
| <i>Zostera noltii</i> | <i>Zostera noltii</i> meadows | 20 |
| Trottoir | Build-ups of <i>Lithophyllum byssoides</i> | 20 |
| <i>Cystoseira mediterranea</i> 4 | Almost continuous belt of <i>C. mediterranea/stricta</i> | 19 |
| <i>Cystoseira mediterranea</i> 3 | Abundant patches of dense stands of <i>C. mediterranea/stricta</i> | 15 |
| <i>Cystoseira mediterranea</i> 2 | Abundant scattered plants of <i>C. mediterranea/stricta</i> | 12 |
| <i>Cystoseira compressa</i> | Populations of <i>C. compressa</i> v. <i>compressa</i> | 12 |
| <i>Cystoseira mediterranea</i> 1 | Rare scattered plants of <i>C. mediterranea/stricta</i> | 10 |
| <i>Corallina</i> | Belt of <i>Corallina elongata</i> without <i>Cystoseira</i> | 8 |
| <i>Haliptilon</i> | Belt of <i>Haliptilon virgatum</i> , without <i>Cystoseira</i> | 8 |
| <i>Mytilus</i> | Mussel (<i>Mytilus galloprovincialis</i>) beds, without <i>Cystoseira</i> | 6 |
| Encrusting corallines | Belt of <i>Lithophyllum incrustans</i> , <i>Neogoniolithon brassica-florida</i> and other encrusting corallines | 6 |
| Green algae | Upper sublittoral belts of <i>Ulva</i> and <i>Cladophora</i> | 3 |
| Blue greens | Communities dominated by Cyanobacteria and <i>Derbesia tenuissima</i> | 1 |

Indicatore di stato per i popolamenti a macroalghe dell'intertidale roccioso basato su criteri di sensibilità relativi al tipo di specie e alla loro abbondanza.

Valore derivante da media pesata in funzione dell'estensione della costa caratterizzata dalle varie formazioni vegetali fratto il valore di riferimento per l'area.

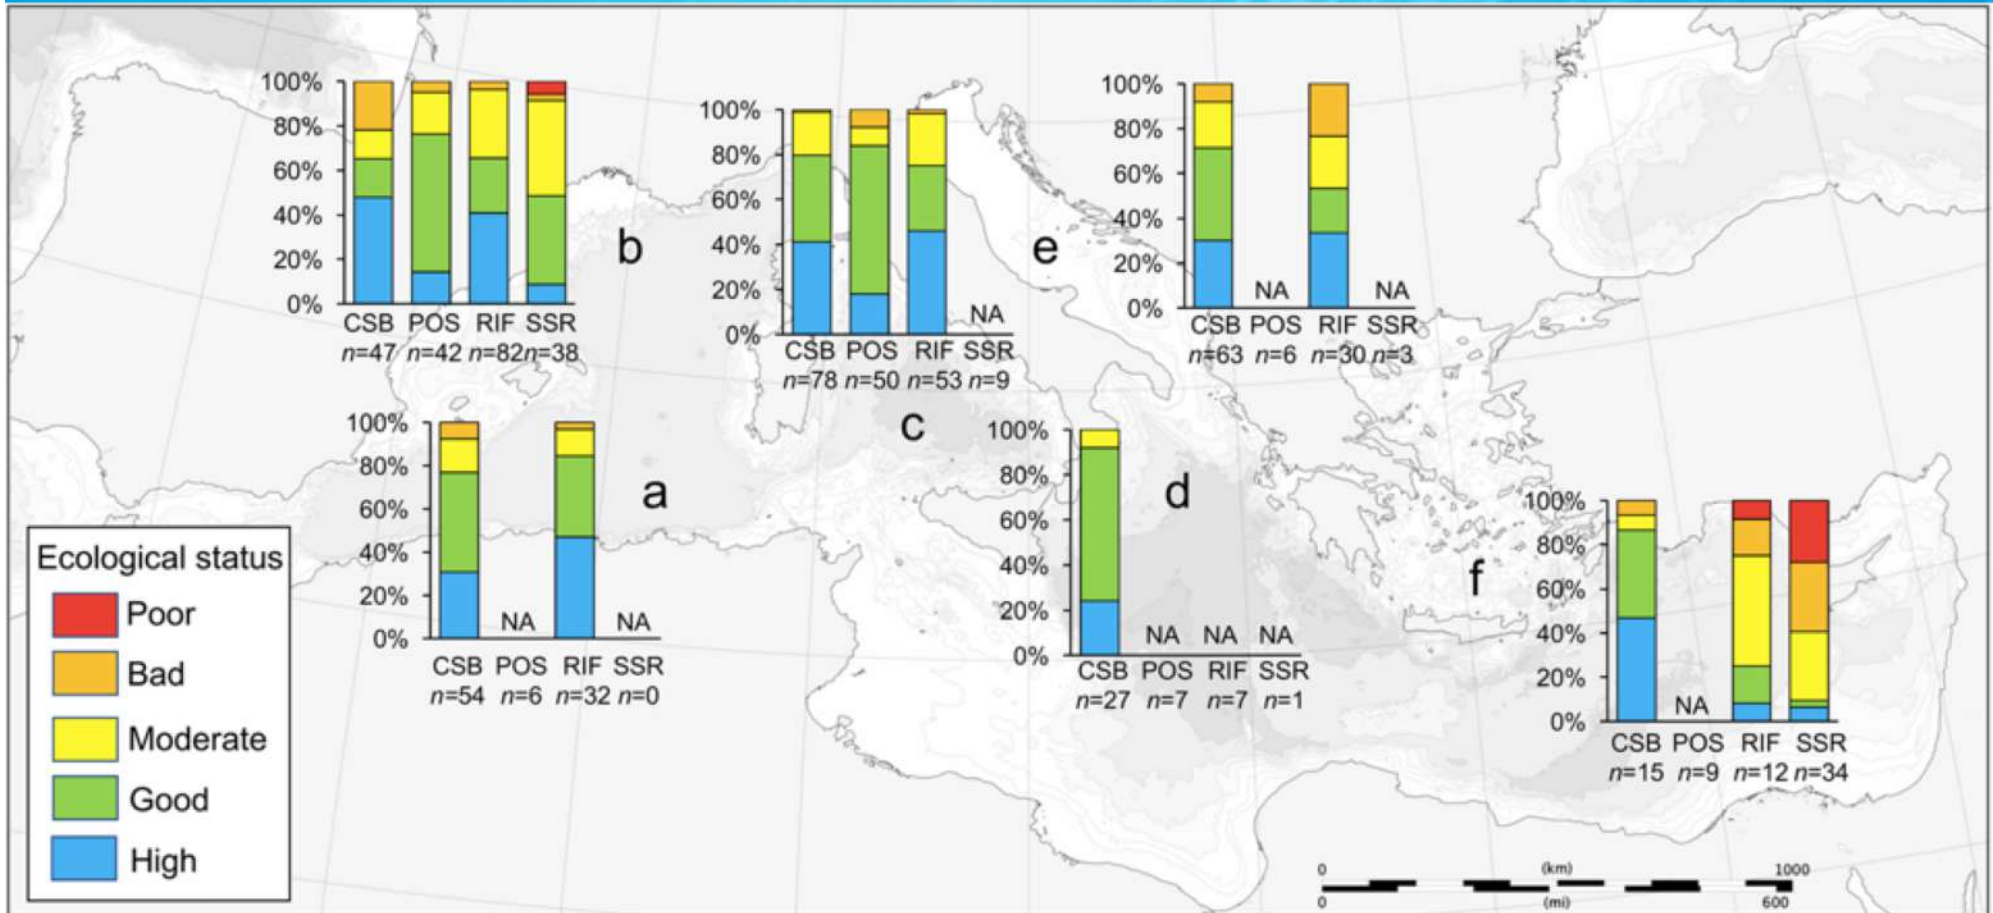

Reef-EBQI

| Functional compartment | Weighting (W) | Parameter | 4 | 3 | 2 | 1 | 0 |
|--|---------------|--|-----------------------------------|------------------------------------|---------------------|----------------------|-----------------|
| 1- MPOs | 15 | Cover type | Arborescent perennial $\geq 50\%$ | Arborescent perennial 5 to $<50\%$ | Shrubby $\geq 50\%$ | Shrubby 5 to $<50\%$ | Turf Encrusting |
| 2- Detritus-feeders | 3 | Density (individuals 10 m^{-2}) | <0.5 | 0.5 to 1.0 | 1.1 to 2.0 | 2.1 to 5.0 | >5.0 |
| 3- Filter- and suspension-feeders | 2 | Density (individuals 10 m^{-2}) | <2.5 | 2.5 to 5.0 | 5.1 to 10.0 | 10.1 to 20.0 | >20.0 |
| 4- Sea urchins | 10 | Density (individuals m^{-2}) | 0.05 to 1.0 | <0.05 | 1.1 to 5.0 | 5.1 to 10.0 | >10.0 |
| 5- Invertivorous invertebrates | 3 | | | | | | |
| - <i>Octopus vulgaris</i> , <i>Marthasterias glacialis</i> | | Density (individuals 200 m^{-2}) | >1.0 | 0.6 to 1.0 | 0.3 to 0.5 | 0.1 to 0.2 | <0.1 |
| - <i>Hexaplex trunculus</i> | | Density (individuals 10 m^{-2}) | <0.5 | 0.6 to 1.0 | 1.1 to 2.0 | 2.1 to 4.0 | >4.0 |
| 6- Herbivorous teleosts | 4 | Biomass kg teleosts WM 100 m^{-2} | 1.1 to 3.0 | 3.1 to 4.0 | >4.0 | 0.25 to 1.0 | <0.25 |
| 7-8- Omnivorous and Invertivorous teleosts | 4 | Biomass kg teleosts WM 100 m^{-2} | >3.5 | 2.6 to 3.5 | 1.6 to 2.5 | 0.8 to 1.5 | <0.8 |
| 9- Piscivorous teleosts | 7 | Biomass kg teleosts WM 100 m^{-2} | >5.0 | 1.0 to 5.0 | 0.5 to 0.9 | 0.4 to 0.1 | <0.1 |
| 10- Planktivorous teleosts | 1 | Biomass kg teleosts WM 100 m^{-2} | >2.0 | 2.0 to 1.5 | 1.5 to 0.9 | 0.9 to 0.3 | <0.3 |
| 11- Sea birds | 1 | | | | | | |
| - <i>Phalacrocorax</i> spp. | | Distance to the nearest nesting site (km) | <4.0 | 4.0 to 7.9 | 8.0 to 12.9 | 13.0 to 17.0 | >17.0 |
| - <i>Pandion haliaetus</i> | | Distance to the nearest nesting site (km) | <4.0 | 4.0 to 7.9 | 8.0 to 12.9 | 13.0 to 17.0 | >17.0 |

Indicatore di stato per gli ecosistemi di fondo duro superficiali (15 m) basato su differenti criteri relativi a diverse componenti dell'ecosistema e alla loro abbondanza o presenza. Valore derivante da media pesata in funzione dell'importanza ecologica delle varie componenti fratto il valore massimo raggiungibile.

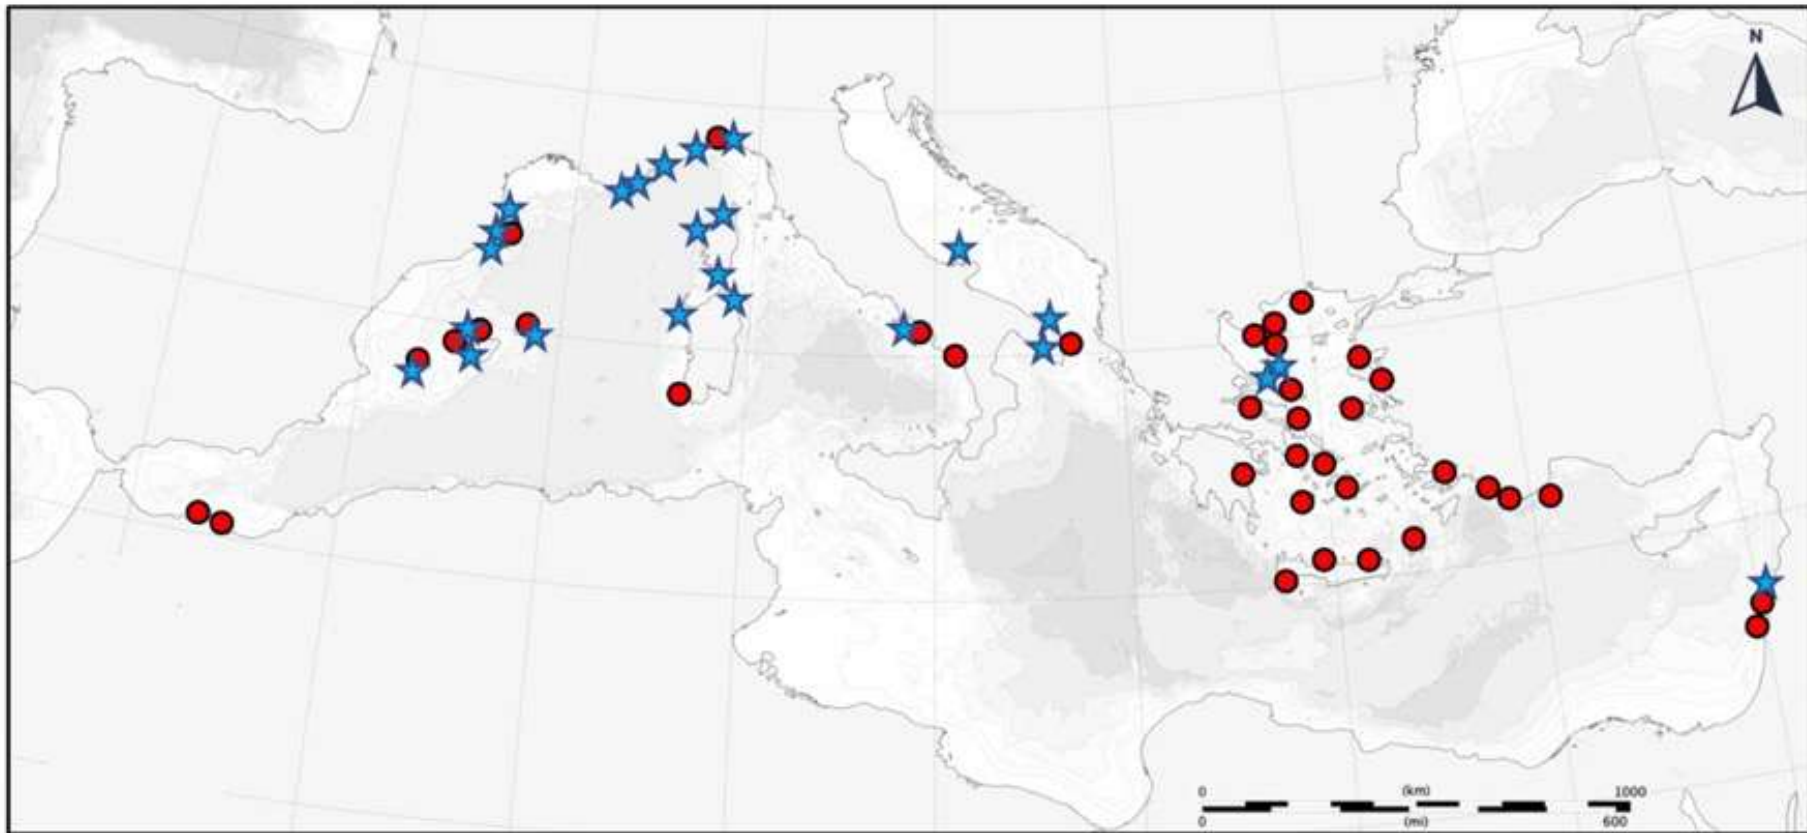

Thibaut et al. 2017

Ecological status

Lack of data in several areas. Apparently, rocky reefs in the Levant basin are those in worse conditions
