Corso di Laurea in Fisica – UNITS

## ISTITUZIONI DI FISICA PER IL SISTEMA TERRA

#### FABIO ROMANELLI

Dipartimento di Matematica e Geoscienze

**romanel@units.it** <u>http://moodle2.units.it/course/view.php?id=9059</u>

## System

A system is a set of interacting or interdependent component parts forming a complex/intricate whole

Every system is delineated by its spatial and temporal boundaries, surrounded and influenced by its environment, described by its structure and purpose and expressed in its functioning

In engineering and physics, a physical system is the portion of the universe that is being studied (of which a thermodynamic system is one major example)

An open system exchanges matter and energy with its surroundings. A closed system exchanges energy, but not matter, with its environment; like Earth. An isolated system exchanges neither matter nor energy with its environment

> <u>http://www.merriam-webster.com/dictionary/system</u> Citation: Pidwirny, M. (2006). "Definitions of Systems and Models". <u>http://www.physicalgeography.net/fundamentals/4b.html</u>

## What is a System?

### Systems

a group of interacting parts that work to together to do a job or to form a whole

Open Systems

Closed Systems

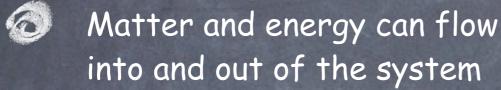

## What is a System?

#### Open System

Our Uncovered pan of boiling water

#### Vegetable Garden

Natural Environment

A car is an open system. Matter and energy move in.

## What is a System?

#### O Closed System

- Matter cannot enter or leave, energy can
- 0

0

Covered pan of boiling water

Terrarium

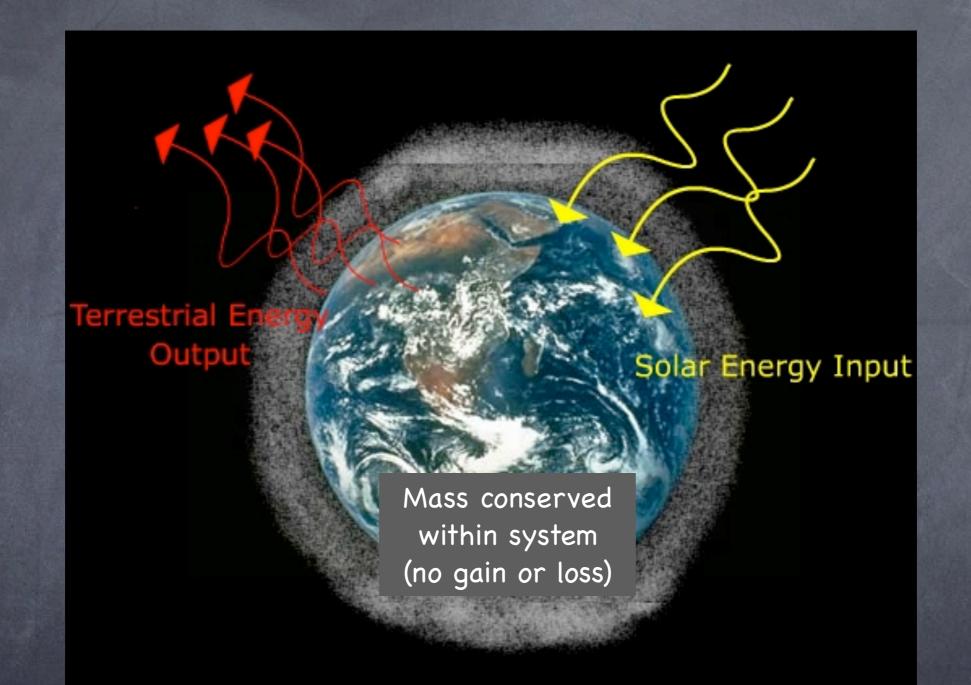

Matter does not enter closed systems, but energy does.

Matter moves around inside closed systems. Energy moves out.

## Earth as a closed System

Closed system: exchange of energy but negligible exchange of mass with surroundings

## Earth System Physics

Study the processes and interactions (cycles) among the atmosphere, hydrosphere, cryosphere, biosphere, and geosphere from a global to local point-of-view, and across the time scales (minutes to eons) in which these spheres interact.

It requires the use of physical and chemical laws with mathematics to describe the physical, chemical and biological processes within each sphere and the interactions between the spheres.

These descriptions are used along with observations to construct models through which complex interactions of the spheres are studied.

It is through the understanding of these complex interactions that accurate, predictive models are developed.

## Earth System

#### **Earth System**

A complex system made up of:

6

Matter

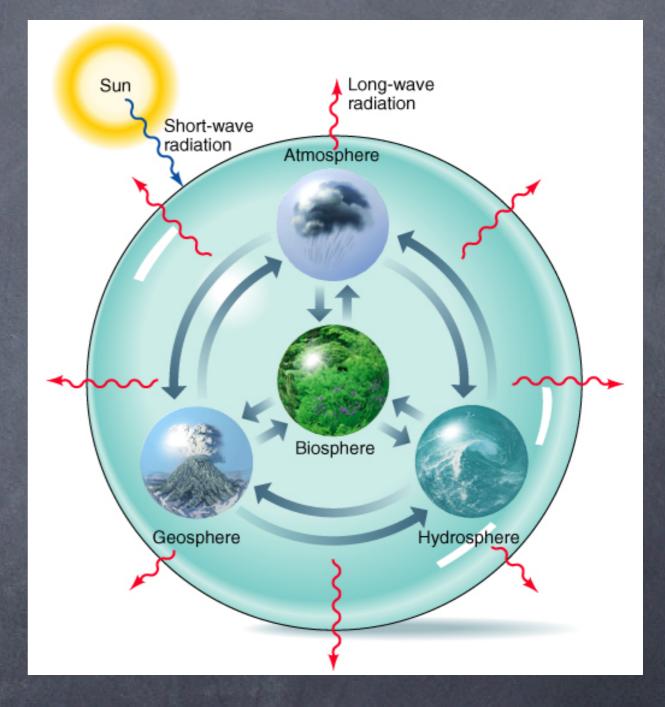

Nonliving things.

Matter and energy continuously cycled through the smaller systems that make up Earth's spheres.

## Major Themes

Scale Processes in the Earth system act on length scales of microns to thousands of kilometers, and on time scales of milliseconds to millions of years.

**Energy** The Earth system is powered by one external source (the Sun) and two internal ones: radioactive decay, and gravitational energy (heat still being lost from planetary formation).

Cycles Material in the Earth system is continually recycled in numerous overlapping cycles.

## Earth System

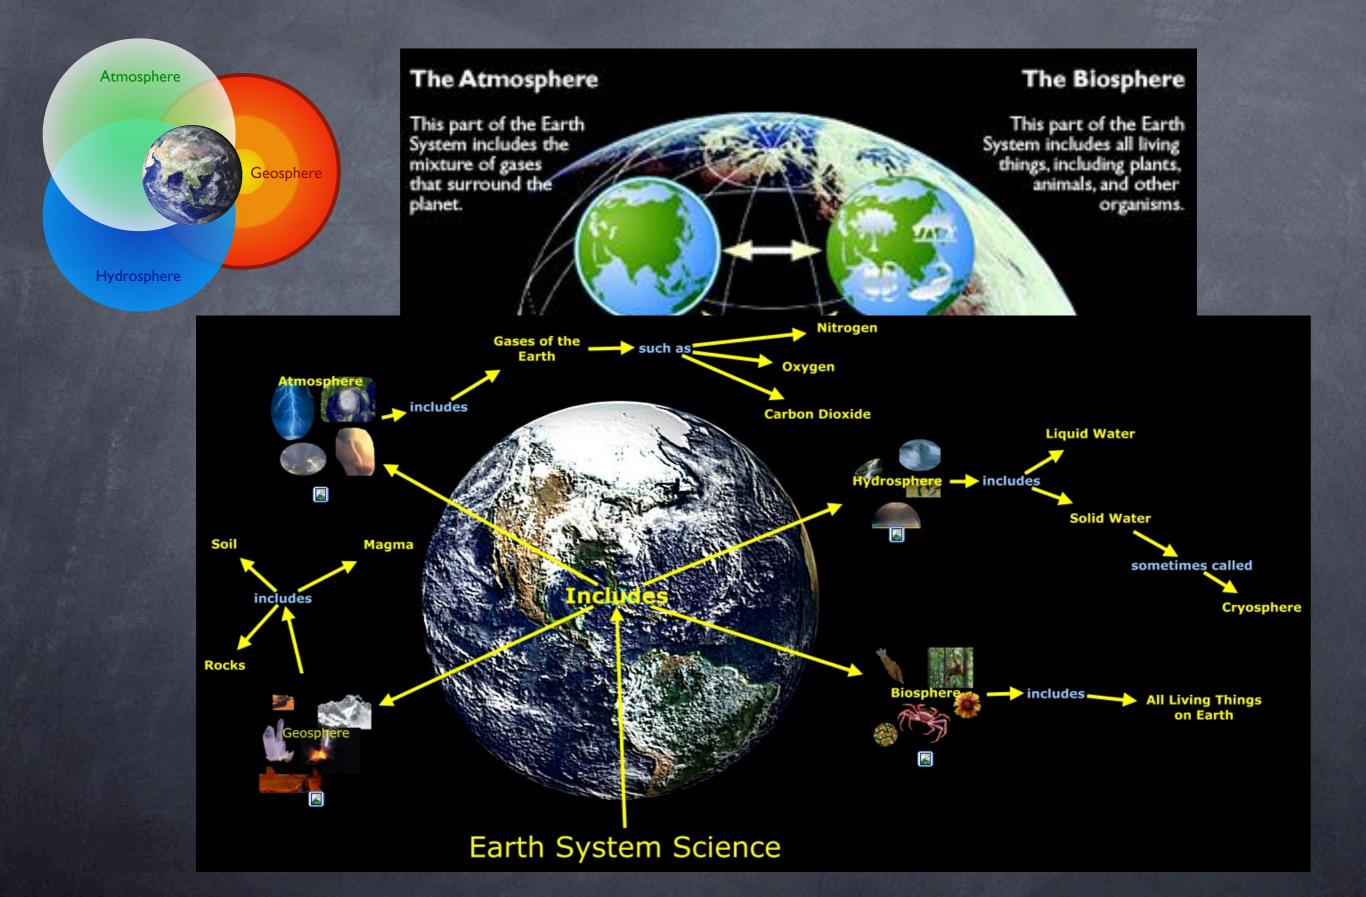

#### Atmosphere

#### Geosphere

#### Hydrosphere

## Earth system

## What is the Earth's Geosphere?

#### 6 Geosphere

Mostly solid, rocky part of the Earth.

Divided into 3 Layers

1. Crust

2. Mantle

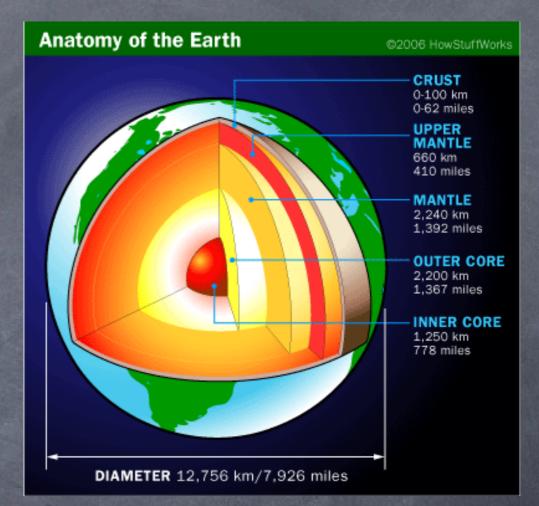

6

## What is the Earth's Hydrosphere?

### Hydrosphere

Part of the Earth that is liquid water.

Always moving, through all spheres.

71% of Earth's surface is the ocean.

Lakes, Rivers, Marshes

Rain

Underground water

## HYDROSPHERE

## What is the Earth's Cryosphere?

#### Cryosphere

Made up of all frozen water on Earth.

Ice

Sea Ice

Glaciers

0

Snow

## What is the Earth's Atmosphere?

#### **Atmosphere**

Mostly made of invisible gases that surround the Earth

Contains the air we breathe

Composition

71% Nitrogen

6

23% Oxygen

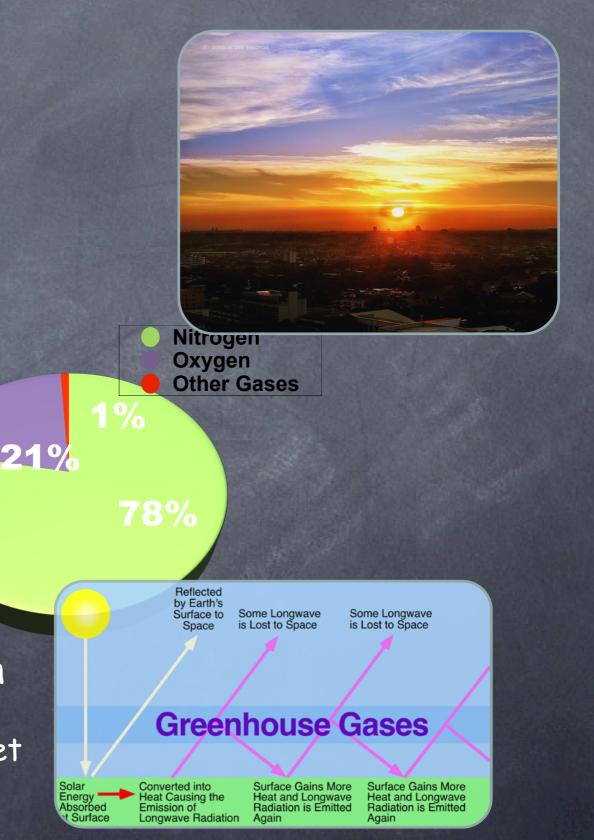

1% Trace Gases

Traps Heat Energy from the sun

Greenhouse effect, keeps the planet warm

## What is the Earth's Biosphere?

#### **Biosphere**

Made up of living things and their habitats

Must Have:

Oxygen

Carbon Dioxide

Liquid Water

Moderate Temperatures

Source of Energy

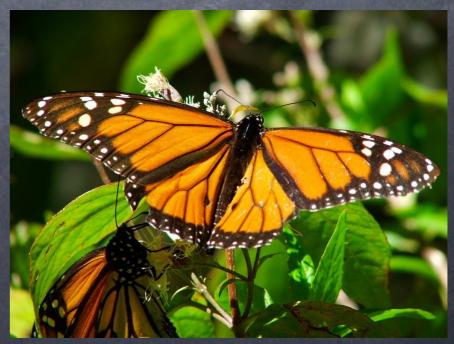

Plants and Algae (photosynthesis)

## How Do Earth's Spheres Interact?

## Matter and Energy

- 1. By exchange of matter

Water Cycle

- Water evaporates into the atmosphere
- Water condenses forming clouds 6

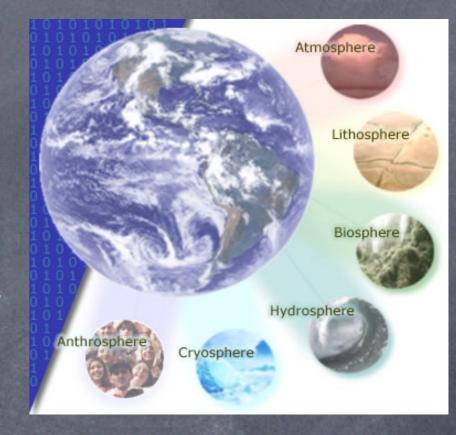

Nitrogen Cycle

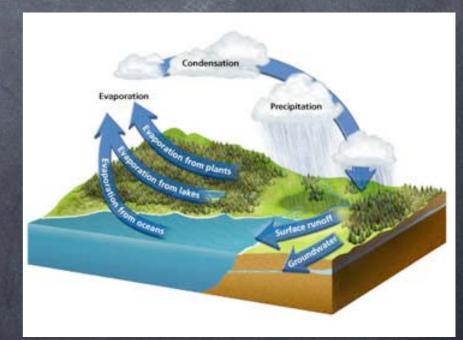

Bacteria release nitrogen into the soil from the atmosphere

Plants use nitrogen to grow

## How Do Earth's Spheres Interact?

#### 2. By exchange of energy

Moves back and forth between spheres

6

Plants use solar energy to make food

Animals eat plants for energy

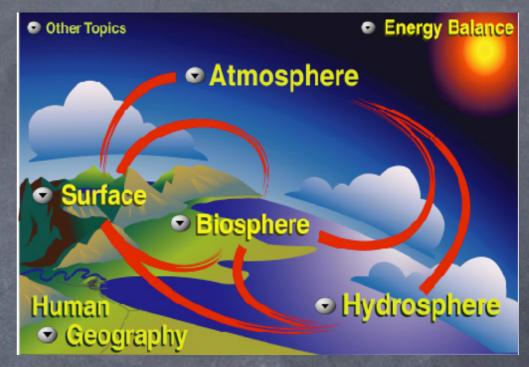

0

Solar Energy

Drives winds and Weather

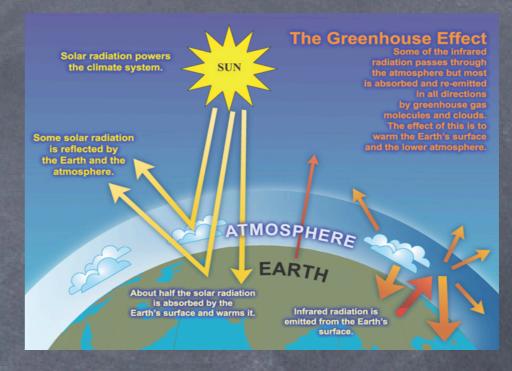

## Source of Earth's Energy?

### Earth's Energy

- Most comes from the Sun
  - A tiny fraction
- 0
- Ocean Tides
- Geothermal
- 🙆 Lava & Magma
- 0
- Moves or Changes form
- 6

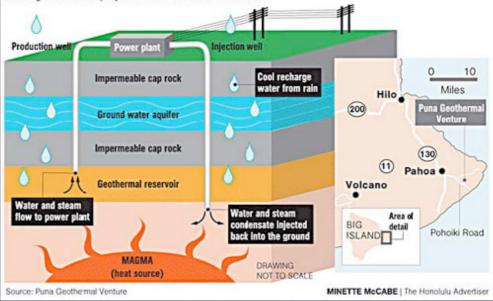

Not created or destroyed

Transferred between spheres

#### GEOTHERMAL ENERGY EXTRACTION

Puna Geothermal Venture's power plant extracts geothermal fluid from reservoirs deep inside the Earth and converts it into electricity for 30,000 Big Island homes. The fluid is re-injected back into the ground, creating a closed-loop system with near-zero emissions.

## Source of Earth's Energy?

#### Energy Budget

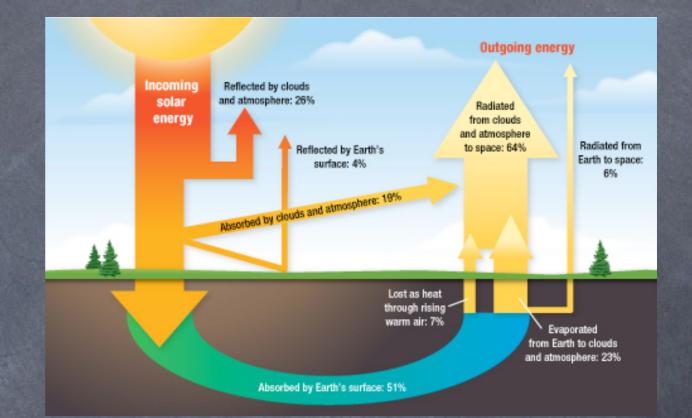

A way to keep track of energy transfers into and out of Earth's system

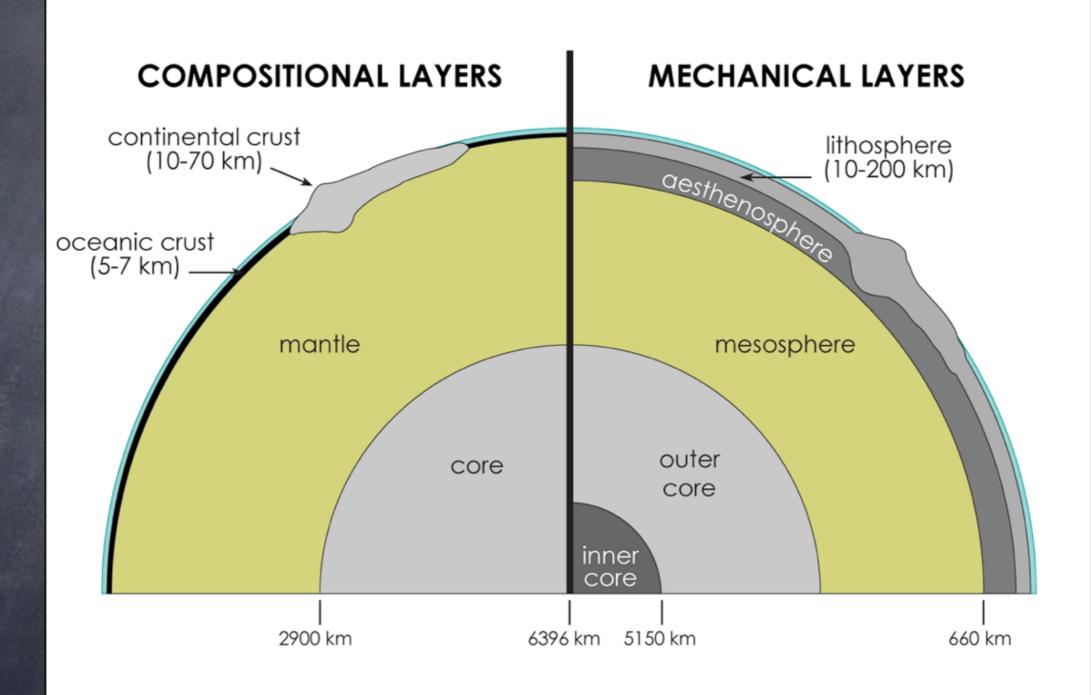

#### Unbalanced budget

Can increase or decrease Earth's temperatures

## Earth system: geosphere

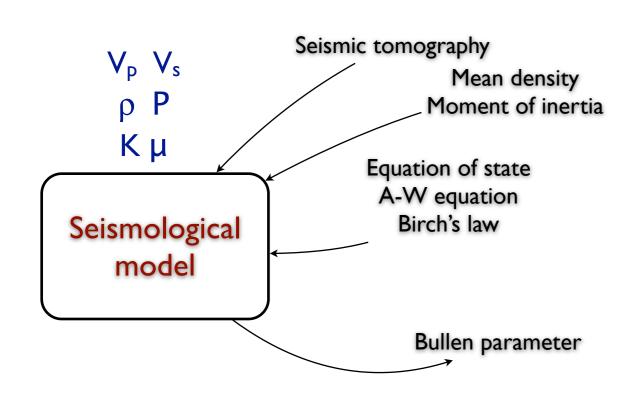

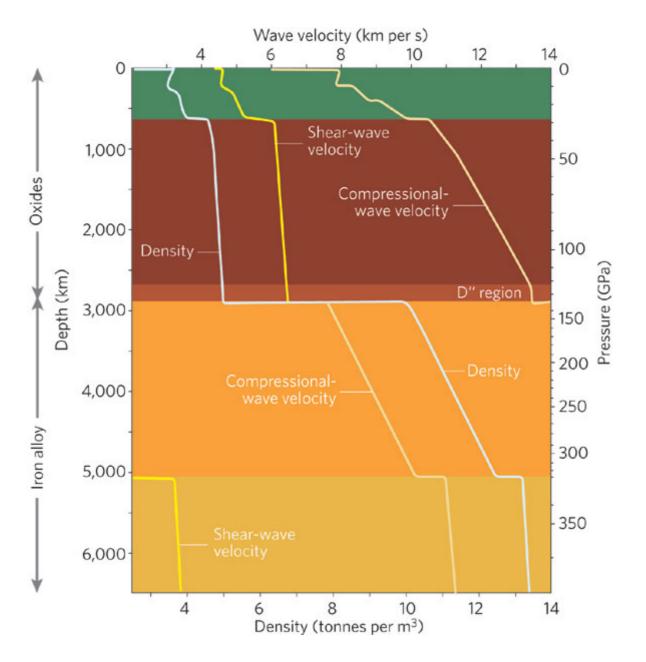

## Earth layers

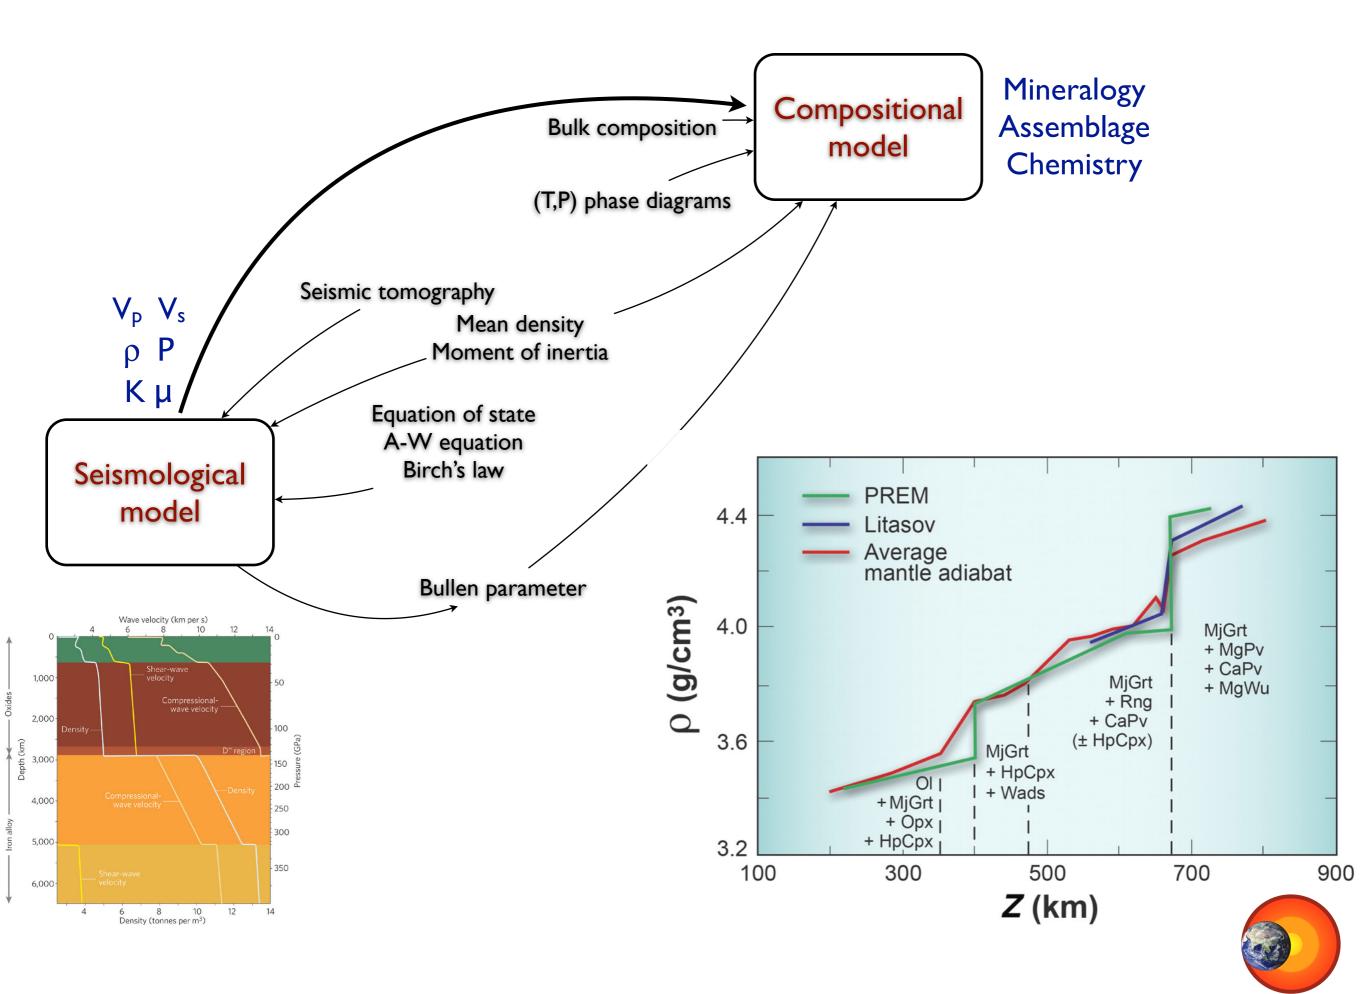

Primarily silica	Composition	Mechanical	Characteristics
plus light metallic elements	crust	lithosphere asthenosphere	<ul> <li>← brittle solid</li> <li>← solid (but nearly liquid)</li> </ul>
Primarily silica plus iron and magnesium	mantle	mesosphere	← solid
Primarily iron —	core	outer core	← liquid
		inner core	← solid

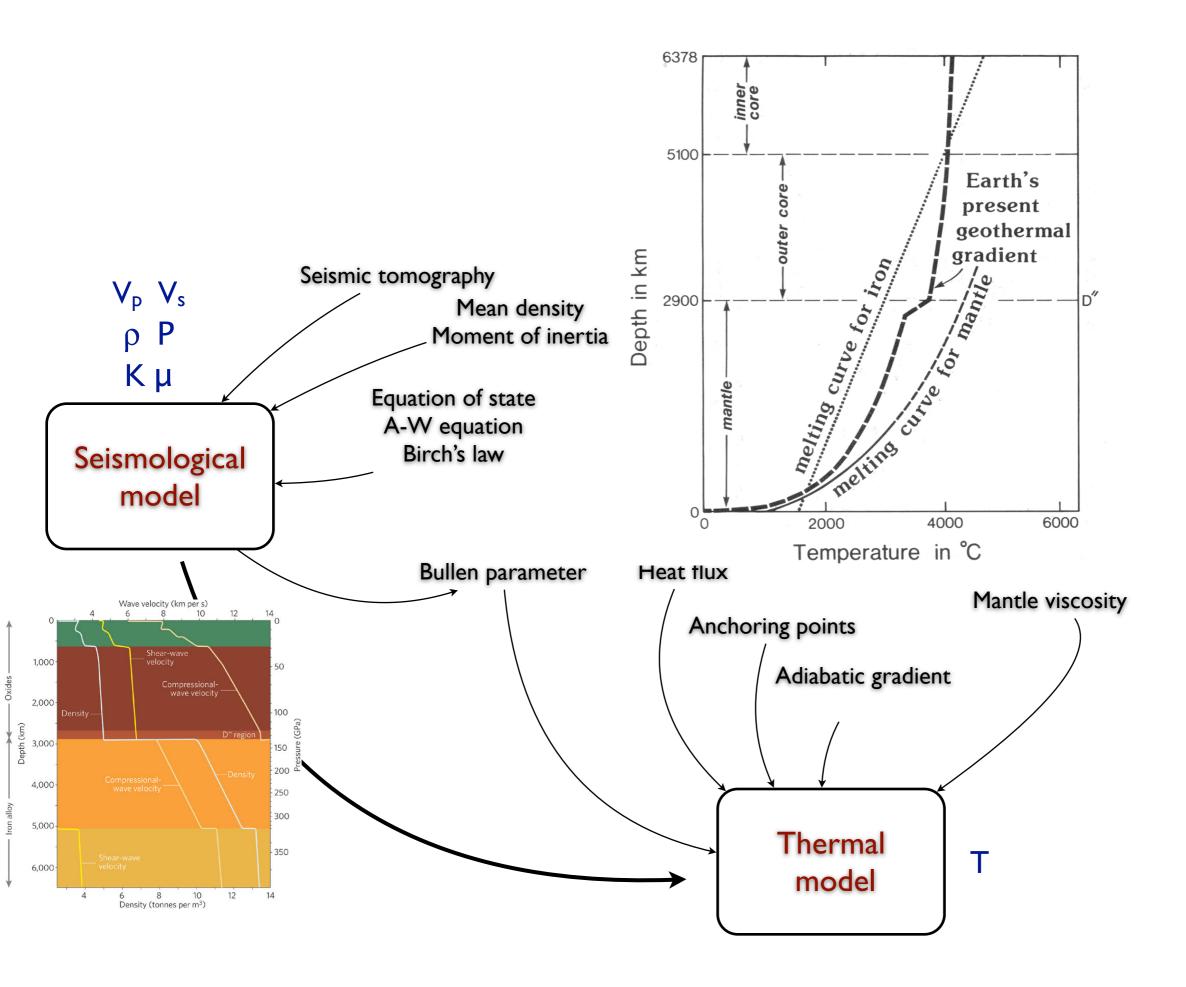

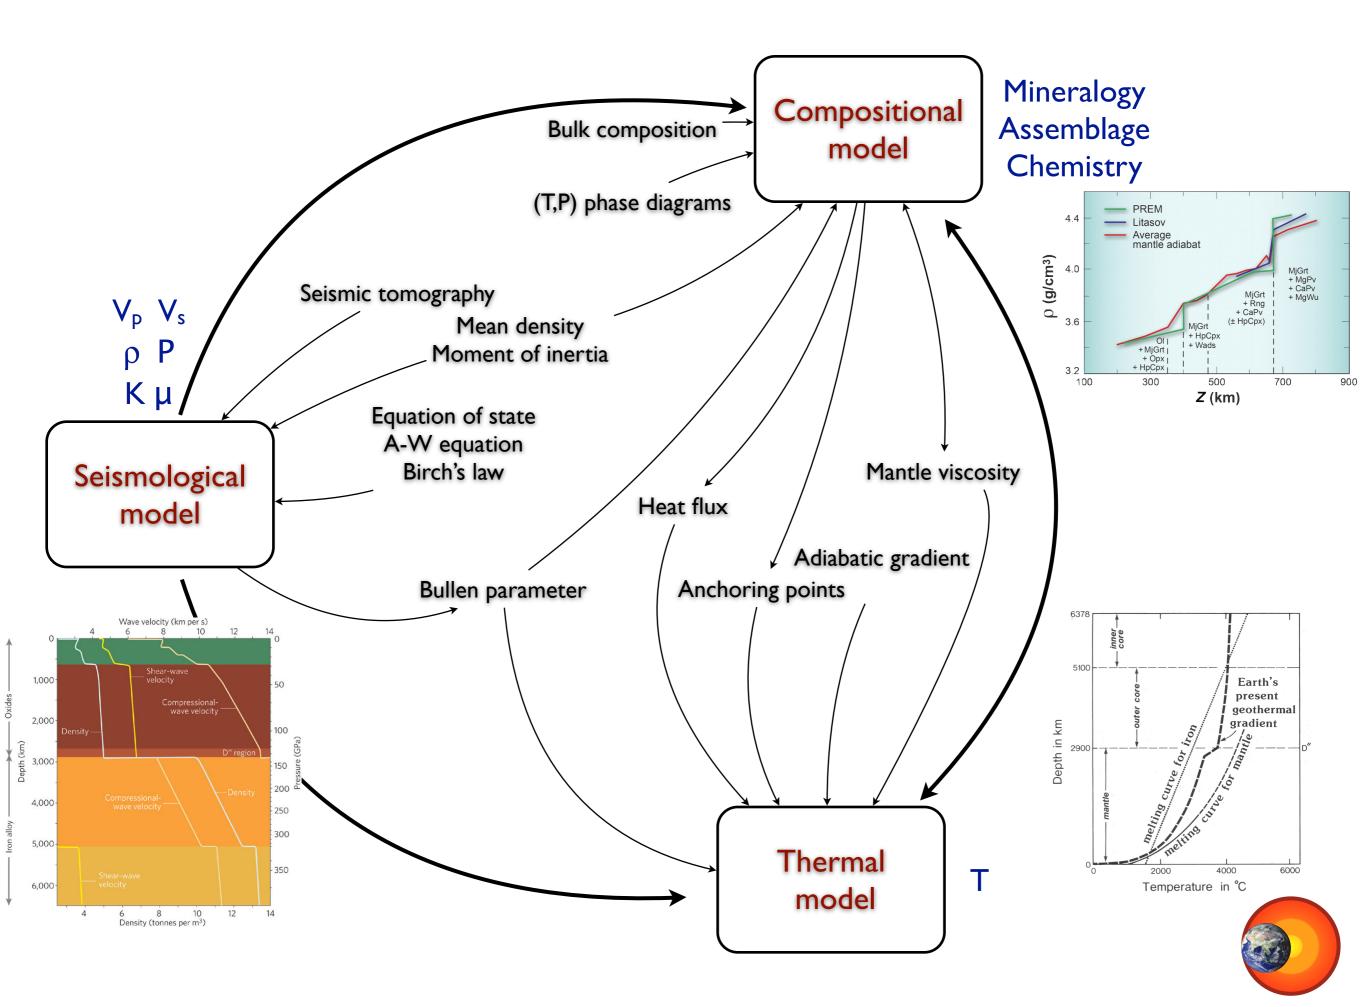

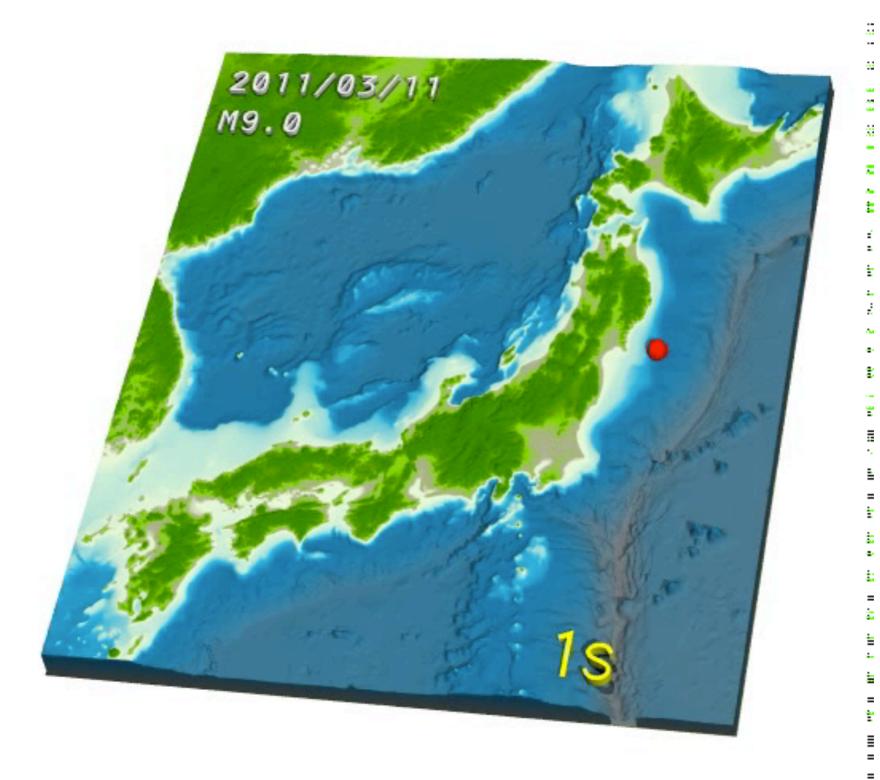

#### Ground motion animation: time scales...

#### Tsunami animation: time scales...

<u>http://outreach.eri.u-tokyo.ac.jp/eqvolc/201103\_tohoku/eng/</u> <u>http://supersites.earthobservations.org/honshu.php</u> <u>http://eqseis.geosc.psu.edu/~cammon/Japan2011EQ/</u>

"Earthquake Research Institute, University of Tokyo, Prof. Takashi Furumura and Project Researcher Takuto Maeda"

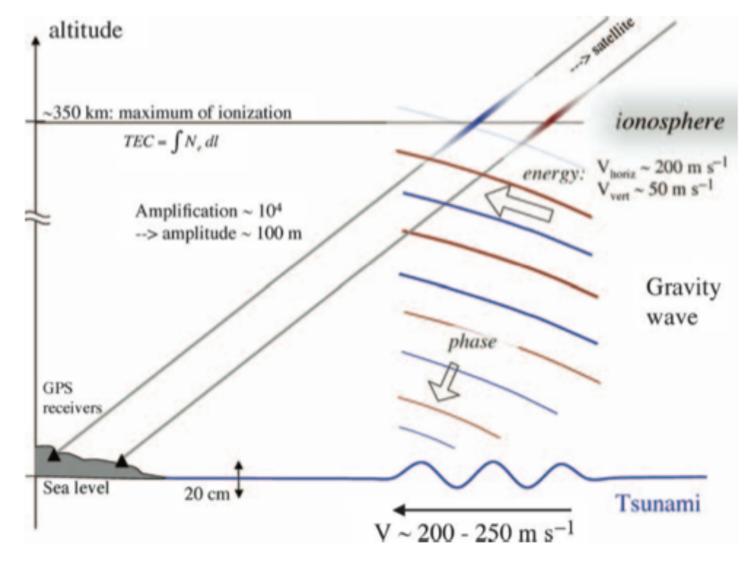

#### Tsunami animation - NOAA

#### Tsunami signature in the ionosphere

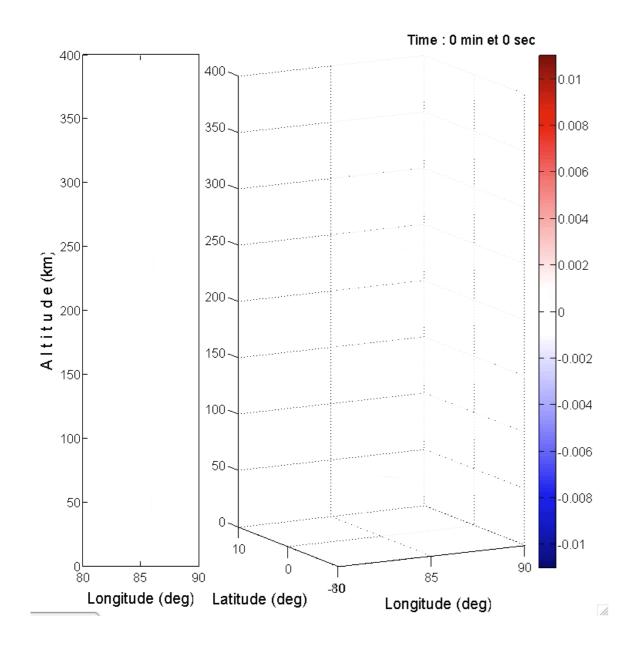

By dynamic coupling with the atmosphere, acousticgravity waves are generated

Traveling lonospheric Disturbances (TID) can be detected and monitored by high-density GPS networks

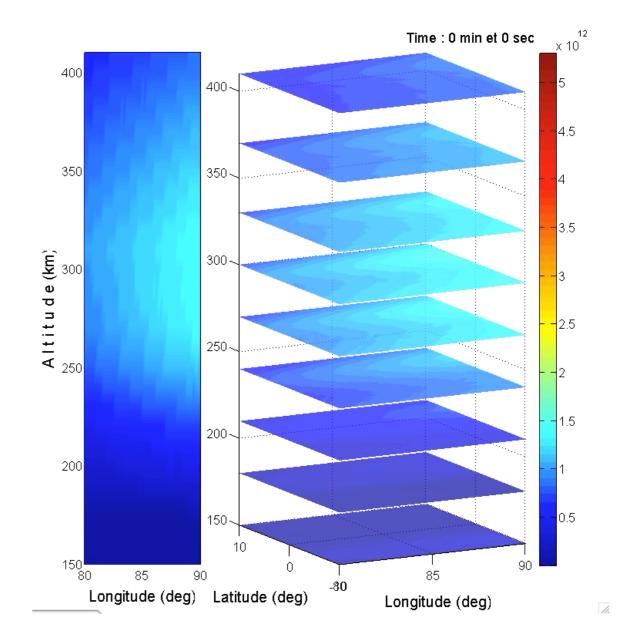

### Tsunami signature in the ionosphere

Tsunami-generated IGWs and the response of the ionosphere to neutral motion at 2:40 UT.

Normalized vertical velocity

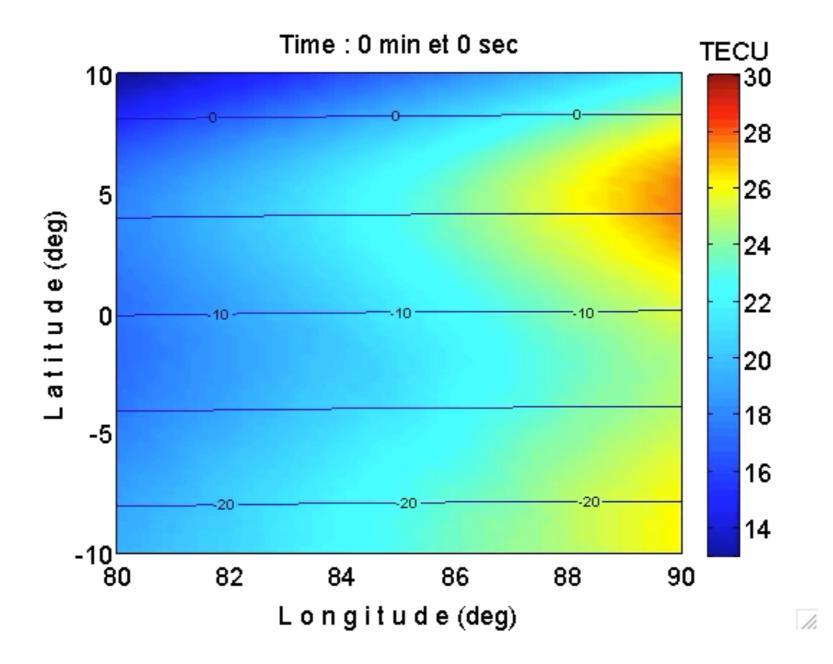

#### Perturbation in the ionospheric plasma

#### Tsunami signature in the ionosphere

The TEC (Total Electron Content) perturbation induced by tsunami-coupled IGW is superimposed on a broad local-time (sunrise) TEC structure.

#### **Classification of Partial Differential Equations (PDE)**

Second-order PDEs of two variables are of the form:

$$a\frac{\partial^{2}f(x,y)}{\partial x^{2}} + b\frac{\partial^{2}f(x,y)}{\partial x\partial y} + c\frac{\partial^{2}f(x,y)}{\partial y^{2}} + d\frac{\partial f(x,y)}{\partial x} + e\frac{\partial f(x,y)}{\partial y} = F(x,y)$$

$$b^{2} - 4ac < 0 \qquad \text{elliptic} \qquad \text{LAPLACE equation}$$

$$b^{2} - 4ac = 0 \qquad \text{parabolic} \qquad \text{DIFFUSION equation}$$

$$b^{2} - 4ac > 0 \qquad \text{hyperbolic} \qquad \text{WAVE equation}$$

Elliptic equations produce stationary and energy-minimizing solutions

**Parabolic** equations a **smooth-spreading flow** of an initial disturbance

Hyperbolic equations a propagating disturbance

**∂R** 

R

S

# **Initial conditions:** starting point for propagation problems

**Boundary conditions:** specified on domain boundaries to provide the interior solution in computational domain

Dirichlet:u = f on  $\partial R$ Neumann: $\frac{\partial u}{\partial n} = f$  or  $\frac{\partial u}{\partial s} = g$  on  $\partial R$ Robin: $\frac{\partial u}{\partial n} + ku = f$  on  $\partial R$ 

# Steady-state two-dimensional heat conduction equation is prototypical elliptic PDE

Laplace equation - no heat generation

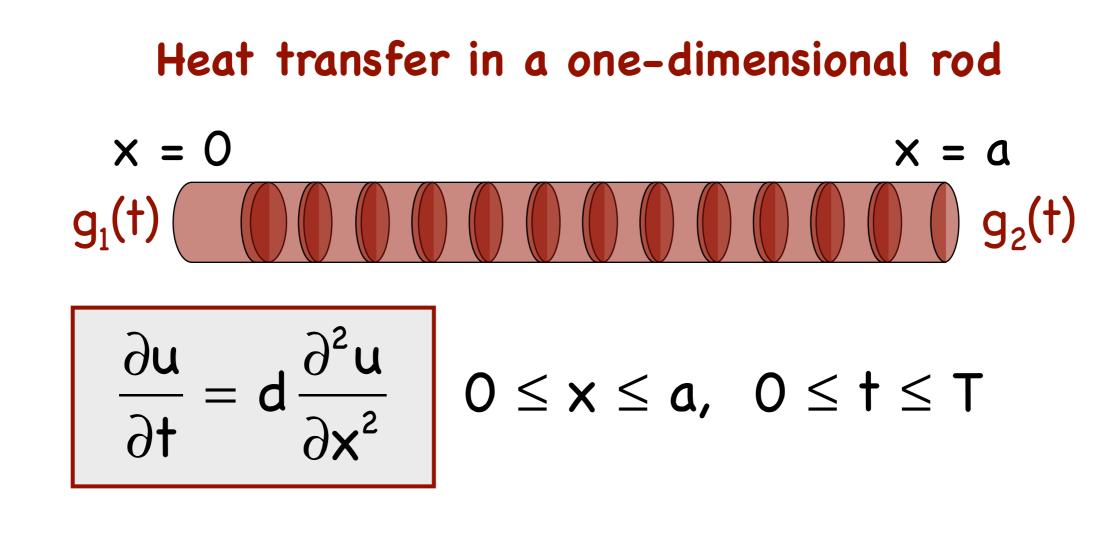

$$\frac{\partial^2 T}{\partial x^2} + \frac{\partial^2 T}{\partial y^2} = 0$$

Poisson equation - with heat source

$$\frac{\partial^2 T}{\partial x^2} + \frac{\partial^2 T}{\partial y^2} = f(x, y)$$

I.C.s 
$$u(x, 0) = f(x)$$
  $0 \le x \le a$   
B.C.s  $\begin{cases} u(0, t) = g_1(t) \\ u(a, t) = g_2(t) \end{cases}$   $0 \le t \le T$ 

$$b^2 - 4ac = 0 - 4(1)(-c^2) > 0$$
: Hyperbolic

$$\frac{\partial^2 \mathbf{u}}{\partial t^2} = \mathbf{v}^2 \, \frac{\partial^2 \mathbf{u}}{\partial \mathbf{x}^2}$$

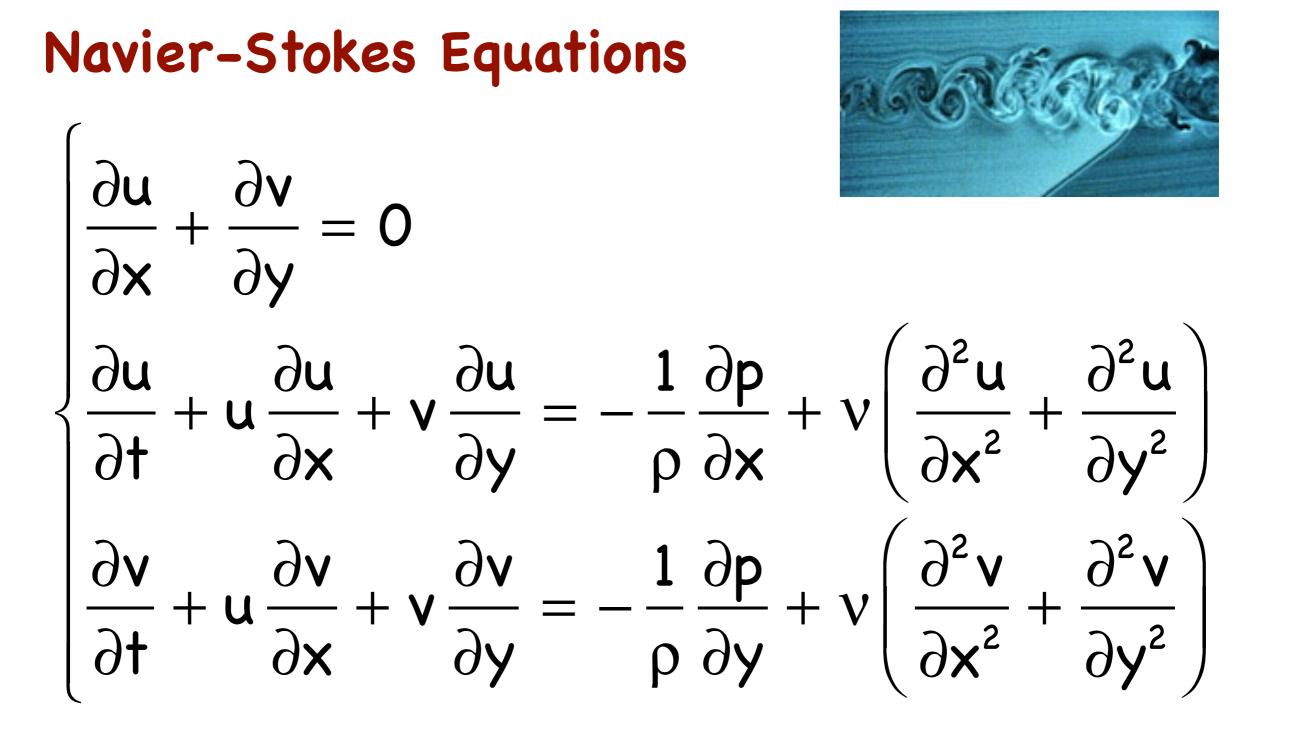

$$0 \le x \le a, 0 \le t$$

I.C.s 
$$\begin{cases} u(x,0) = f_1(x) \\ u_1(x,0) = f_2(x) \end{cases} \quad 0 \le x \le a \\ u_1(0,t) = g_1(t) \\ u(a,t) = g_2(t) \end{cases}$$

**Coupled PDE** 

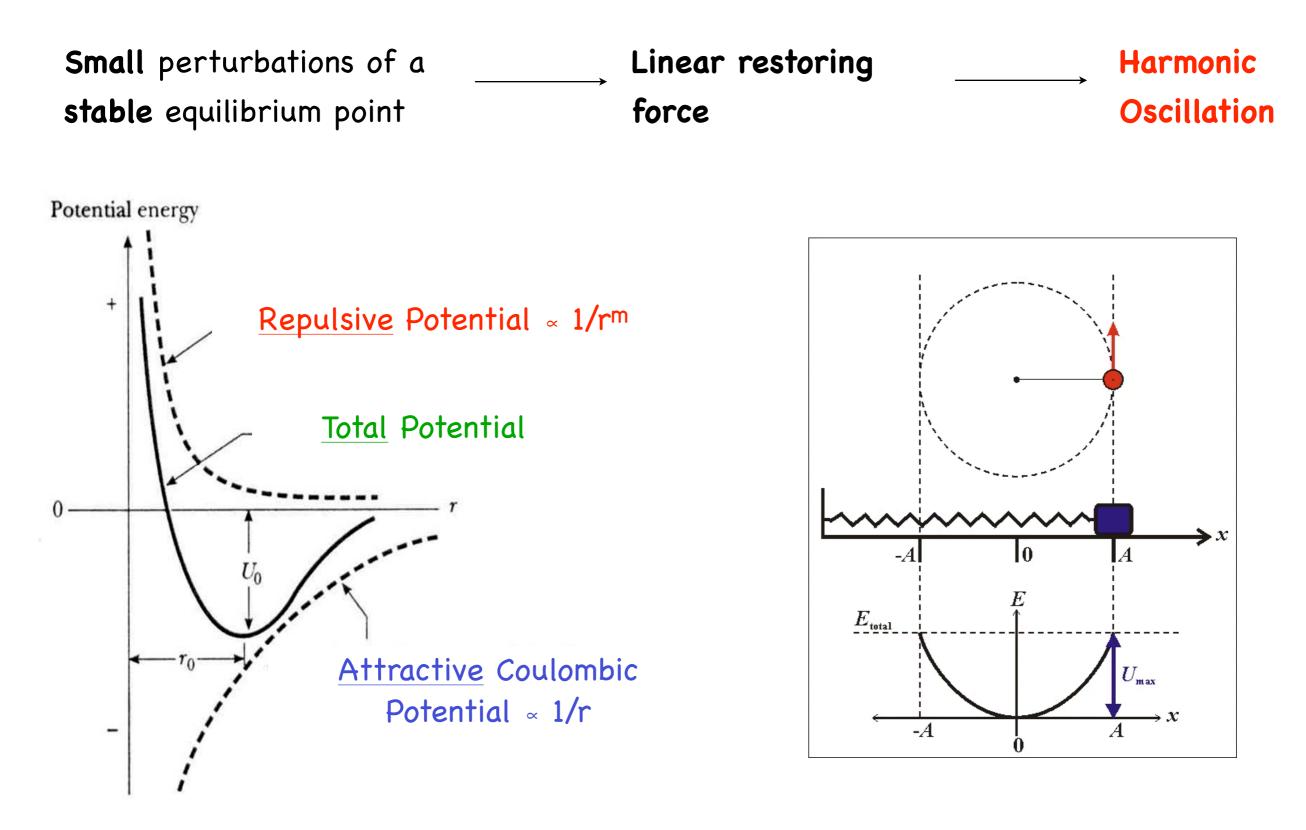

## What is a wave?

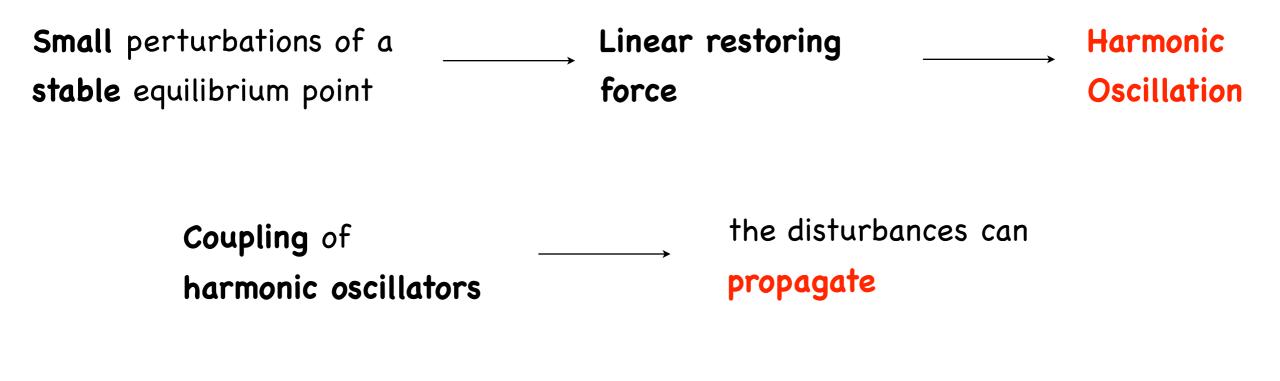

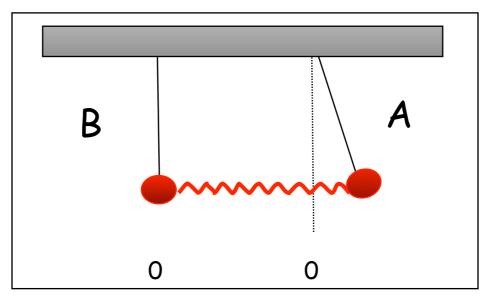

What is a wave? - 2

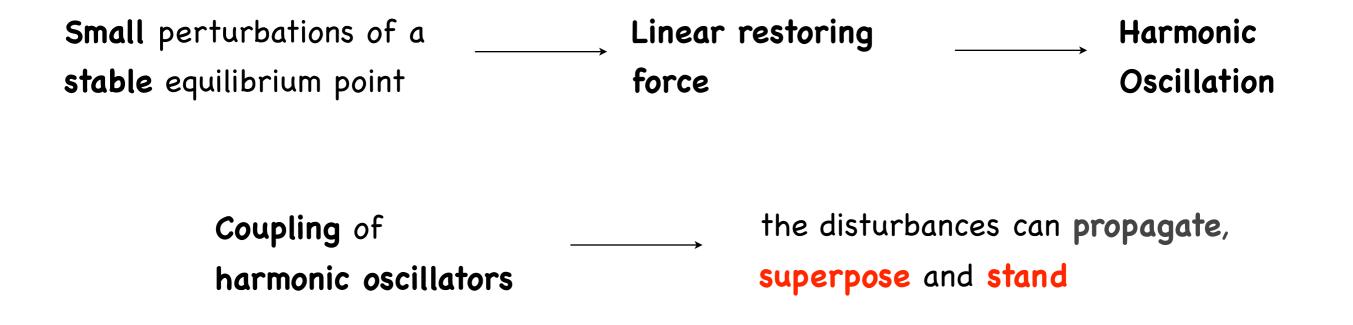

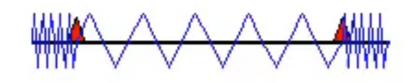

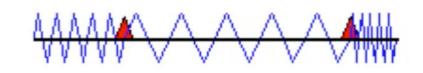

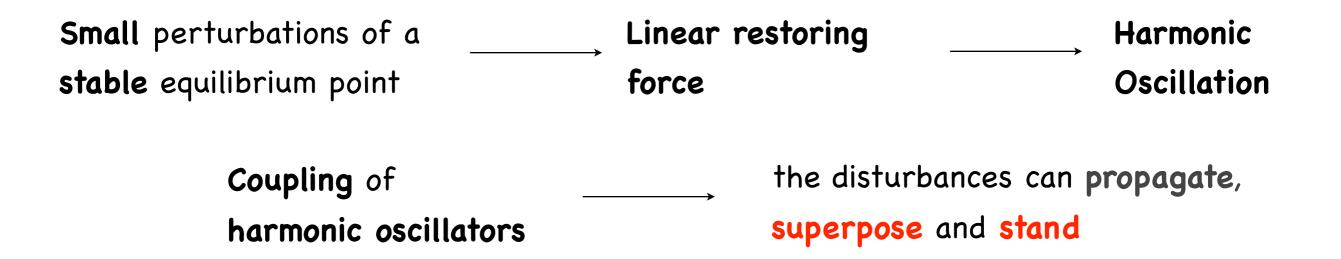

#### Normal modes of the system

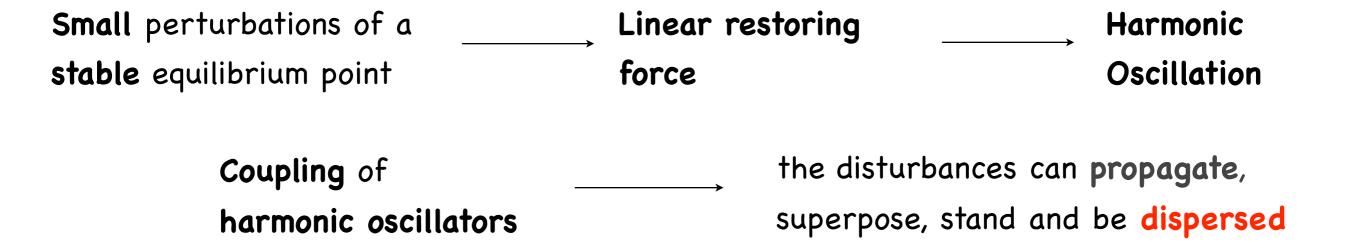

#### General form of LWE

$$\frac{1}{v^2}\frac{\partial^2\psi}{\partial t^2} = \frac{\partial^2\psi}{\partial x^2}$$

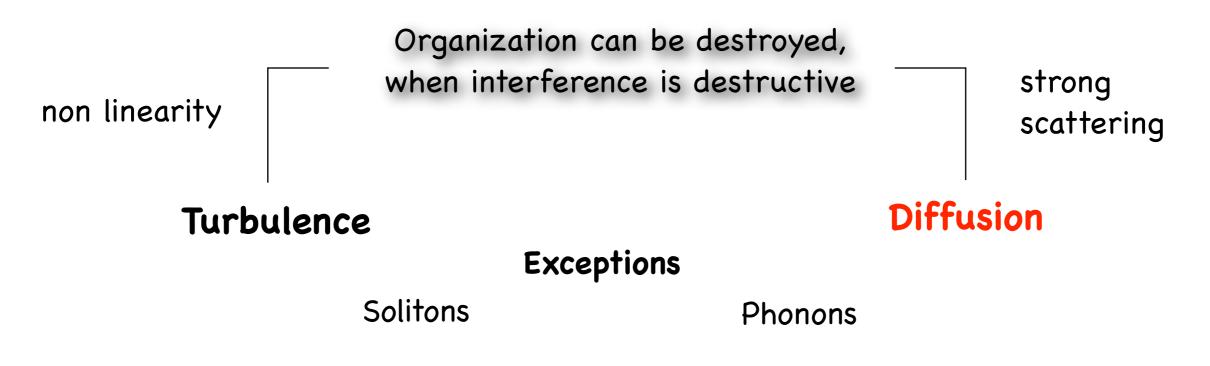

WAVE: organized propagating imbalance, satisfying differential equations of motion

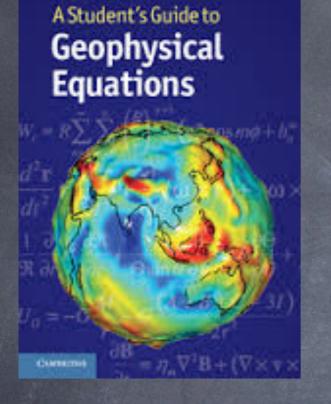

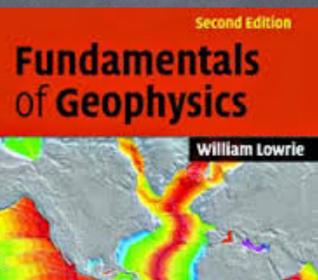

WAVE: organized propagating imbalance, satisfying differential equations of motion
