

Physics Education Laboratory Lecture 06 PCK for Kinematics

Francesco Longo - 21/10/20

Kinematics with Multiple Representations

Opfermann M., Schmeck A., Fischer H.E. (2017) Multiple Representations in Physics and Science Education – Why Should We Use Them?. In: Treagust D., Duit R., Fischer H. (eds) **Multiple Representations in Physics Education. Models and Modeling in Science Education**, vol 10. Springer, Cham. https://doi.org/10.1007/978-3-319-58914-5_1

Distance -Time, Velocity-Time Graphs Metric

Create a graph of a runner's position versus time and watch the runner run a 40-meter dash based on the graph you made. Notice the connection between the slope of the line and the velocity of the runner. Add a second runner (a second graph) and connect real-world meaning to the intersection of two graphs. Also experiment with a graph of velocity versus time for the runners, and also distance traveled versus time.

Students' Exploration Sheet

Analyze the sheet

Observe the use of Multiple Representations

Recognize the PCK features and the Math/Phys interplay patterns

Add one or more exercises to improve the Multiple Representations usage of this sheet

What's missing?

Student Exploration: Distance-Time and Velocity-Time Graphs

[NOTE TO TEACHERS AND STUDENTS: This lesson was designed as a follow-up to the Distance-Time Graphs Gizmo. We recommend you complete that activity before this one.]

Vocabulary: displacement, distance traveled, slope, speed, velocity

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

Dora runs one lap around the track, finishing where she started. Clark runs a 100-meter dash along the straight side of the track.

1. Which runner traveled a greater distance? _____

2. Which runner had a greater change in position, start to finish?

Gizmo Warm-up

The *Distance-Time Graphs* Gizmo shows a dynamic graph of the position of a runner over time. The *Distance-Time and Velocity-Time Graphs* Gizmo includes that same graph and adds two new ones: a velocity vs. time graph and a distance traveled vs. time graph.

The graph shown below (and in the Gizmo) shows a runner's position (or distance from the starting line) over time. This is most commonly called a *position-time graph*.

Check that the **Number of Points** is 2. Turn on **Show graph** and **Show animation** for both **Runner 1** and **Runner 2**.

1. Drag the points to create the graph shown to the right.
 - **Runner 1's** line (the red one) should have endpoints at (0, 0) and (4, 40).
 - **Runner 2's** line (the blue one) should have endpoints at (0, 40) and (4, 20).

Parabolic motion
