

Pedagogical Content Knowledge

Lecture 2 - 06/10/2022

Features about
how you learn physics

[https://forms.gle/i7gPDR
JLgUnr3DA46](https://forms.gle/i7gPDRJLgUnr3DA46)

Which kind of physics learner are you?

19 risposte

- To learn formulas and facts based on the authority of the instructor and text
- To make sense of the material, to integrate it with my opinion and intuitive knowledge
- A mix between the previous two, but preferring the first one, with methodical adherence to the procedures
- A mix between the first two, but preferring the second one, building independent knowledge

What do you think about the way you learned Physics (in secondary school course)

19 risposte

- I'd never had problems, understanding conceptual meaning and formulating it in mathematical point of view
- I had sometimes problems in conceptual meanings and never in mathematical explanations
- I had sometimes problems in mathematical explanations and never in mathematical explanations
- I had always problems with conceptual meanings and mathematical explanations

What do you think about the way you learned Physics (in university course)

19 risposte

- I'd never had problems, understanding conceptual meaning and formulating it in mathematical point of view
- I had sometimes problems in conceptual meanings and never in mathematical explanations
- I had sometimes problems in mathematical explanations and never in mathematical explanations
- I had always problems with conceptual meanings and mathematical explanations

What did you do to improve your conceptual meaning of physics laws?

19 risposte

Physics learning experience (referring to your secondary school course)

Physics teaching observation (referring to your secondary school course)

Did your Physics learning experience change during your university course?

19 risposte

Did your Physics teaching observation change during your university course?

19 risposte

Of the following test formats, which is best for measuring how well students understand the material in physics?

19 risposte

Brandon: "A good physics textbook should show how the material in one chapter relates to the material in other chapters. It shouldn't treat each topic ... With whom do you agree?"

19 risposte

- I agree almost entirely with Brandon
- Although I agree more with Brandon, I think Jamal makes some good points.
- I agree (or disagree) equally with Jamal and Brandon.
- Although I agree more with Jamal, I think Brandon makes some good points.
- I agree almost entirely with Jamal.

Justin: "When I'm learning physics concepts for a test, I like to put things in my own words, so that they make sense to me." Dave: "But putting things... learn things the way the textbook presents them."

19 risposte

- I agree almost entirely with Justin.
- Although I agree more with Justin, I think Dave makes some good points.
- I agree (or disagree) equally with Justin and Dave.
- Although I agree more with Dave, I think Justin makes some good points.
- I agree almost entirely with Dave.

Imagine you are teaching physics at high school and you want to make your students familiar with the concept of block and tackle. Would you do so by:

19 risposte

- just explaining in a verbal fashion, for instance how the length of the pulling...
- just showing exemplary pictures of different situations with tackles, point...
- just solving a great number of problems concerning block and tackle
- just starting with a case study, describing it in mathematical language...
- just reading from the textbook and inte...
- None of these

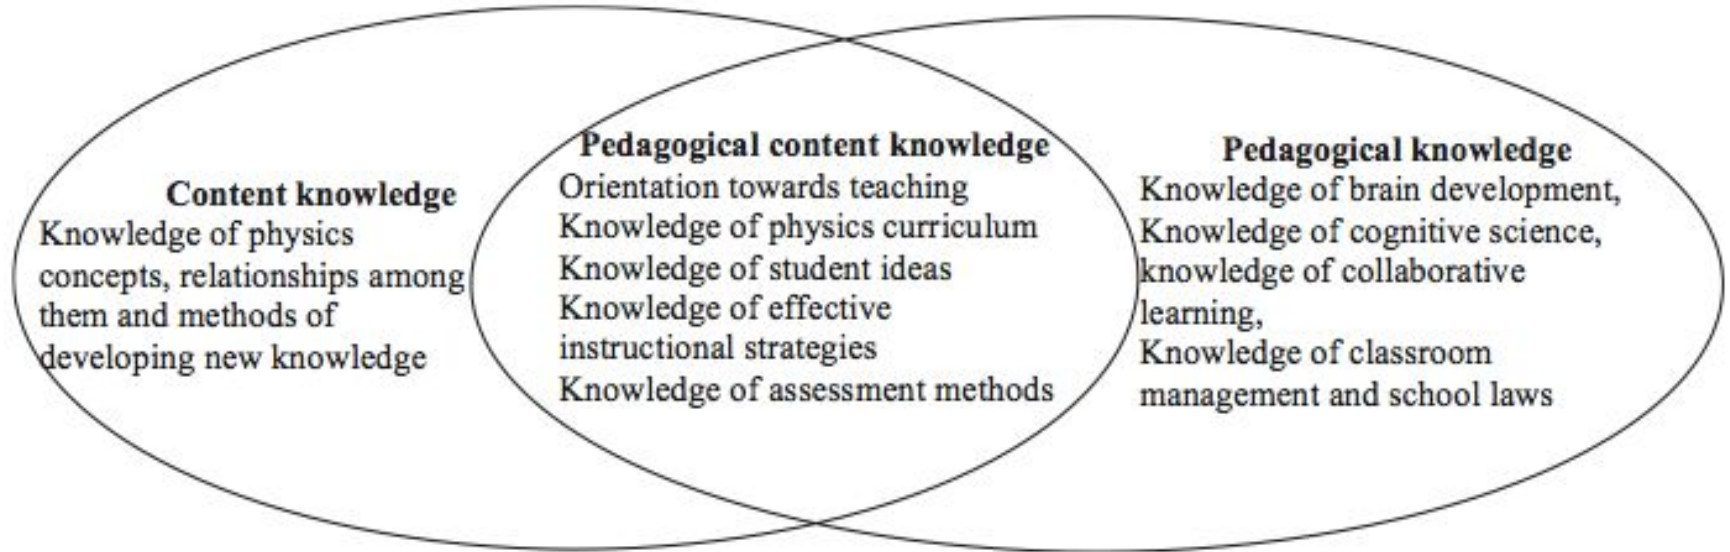

Interaction between Epistemology, Sociology, Learning and Teaching in Physics

“What shall I do with my students to help them understand this physics concept? What materials are there to help me? What are my students likely to already know and what will be difficult for them? How best shall I evaluate what my students have learned?” These questions are common for every teacher, and central to describe the knowledge that distinguishes a teacher from a subject matter specialist.

The Structure of Physics Teacher Knowledge

(Fazio, 2010)

Features of this tripartite structure

Content Knowledge or Subject Matter Knowledge

Deep content knowledge is a necessary condition for the development of PCK.

If teachers themselves do not understand the nuances of a concept, the deep relationships between this particular concept and other concepts, and the ways through which this concept was constructed by the physics community, then translating these nuances into students' understanding is impossible.

Pedagogical Knowledge

Understanding of the processes of learning is crucial for the development of the orientation toward teaching, assessment methods, understanding of the role of student ideas, etc.

For example, the awareness of the complex nature of brain activity should affect how teachers deal with what is widely perceived as “student misconceptions”

Pedagogical Content Knowledge

PCK is highly domain specific; therefore, it is *critical that future teachers develop teachers' PCK in the specific topics that they will be teaching.*

This is particularly relevant in the sciences; the different disciplines such as biology, physics, and earth science have distinct teaching methodologies, curricula, and instructional sequences.

PCK represents a teacher ability to convey the relevant constructs of the content knowledge in a manner that makes it accessible to their students.

The most regularly taught topics in one's subject area, the most useful forms of representation of those ideas, the most powerful analogies, illustrations, examples, explanations, and demonstrations ... including an understanding of what makes the learning of specific concepts easy or difficult: the conceptions and preconceptions that students of different ages and backgrounds bring with them to the learning. (Shulman, 1986b, p. 9)

PCK definition in Science Teaching

(Magnusson et al., 1999)

- orientations toward science teaching
- knowledge and beliefs about science curriculum
- knowledge and beliefs about students' understanding of specific science topics
- knowledge and beliefs about assessment in science
- knowledge and beliefs about instructional strategies for teaching sciences

Five aspects of PCK and their relationship to Physics Teaching

(Etkina et al., 2010, p.3)

Orientations toward Science Teaching

Beliefs regarding the role of students' prior knowledge in their learning, the purpose of problem solving, the roles of experiments in the classrooms, what motivates students in the classroom, etc.

Knowledge of curricula

The knowledge of the sequence of topics that allows a student to build the understanding of a new concept or skill on what she or he already knows.

Knowledge of students' prior understandings about and difficulties with key concepts and practices in science.

Knowledge of students' pre-instruction ideas when they are constructing a new concept.
Knowledge of difficulties students may have interpreting physics language that is different from everyday language.

Knowledge of instructional strategies to scaffold students' learning of key concepts and practices in science.

Knowledge of multiple methods or specific activity sequences that make student learning more successful and an ability to choose the most productive strategy or modify a strategy for a particular group of students or an individual.

Knowledge of what to
assess and specific
strategies to assess
students' understandings
of key concepts and
practices.

Knowledge of ways to assess
student conceptual understanding
and problem solving and general
scientific abilities; knowledge of
how to help students self-assess
their work and to engage in a
meaningful reflection.

Self-reflecting teaching...

Is it present a PCK or not? Which PCK do you recognize? Which pattern is prevalent?
