

A short introduction to the survey

In this survey you will be asked to answer a few questions about your perception of social and environmental changes. The aim of this questionnaire is to describe people's awareness of sustainability and environmental issues related to global changes.

The survey is strictly anonymous but you will be asked to provide some information about yourself (age, sex, country of origin), in order to establish possible social and geographical correlations. The survey is organized in seven sections: climate, pollution, land use, nature, society, information on global change and lifestyle (trasporti, abitudini alimentari, abbigliamento, vacanze). The duration of the survey could vary between 10 and 20 min, depending on the level of involvement and on your availability towards our research.

A summary of the results will be made available on the website of the master degree in "Ecology and Sustainability of Global Changes" and will be discussed in a public event. Follow @gecopodcast to remain updated also on this topic.

Thank you in advance for your time and kind cooperation.
