

# ROOT installation

---

- Some instructions (a few years old, but should still work) at this link: <https://www.unibo.it/sitoweb/gabriele.sirri2/contenuti-utili/df5f946d>
  - For Windows, follow the instructions under “**run Ubuntu natively on Windows 10/11 without Virtual Machines.**”
  - For Mac: in addition to the instructions in the link, you can also use Homebrew ([https://brew.sh/index\\_it](https://brew.sh/index_it)) or MacPort (<https://www.macports.org/install.php>), see <https://root.cern/install/#macos-package-managers>
- ROOT page for installation, where you can find the link to pre-compiled binaries: <https://root.cern.ch/downloading-root>
- In case you need, a bash guide (get familiar with Sect. 1, 2 and 3): <https://swcarpentry.github.io/shell-novice/>
