

An underwater photograph showing a large school of small, silvery fish swimming in clear blue water. Below them is a rocky seabed covered in green algae and other marine life. Sunlight filters down from the surface, creating a bright, shimmering effect at the top of the frame.

GLOBAL CHANGE ECOLOGY AND SUSTAINABILITY
a.a. 2025-2026

Conservation and Management of Marine Ecosystems
Prof. Stanislao Bevilacqua (sbevilacqua@units.it)

Intertidal and subtidal rocky habitats

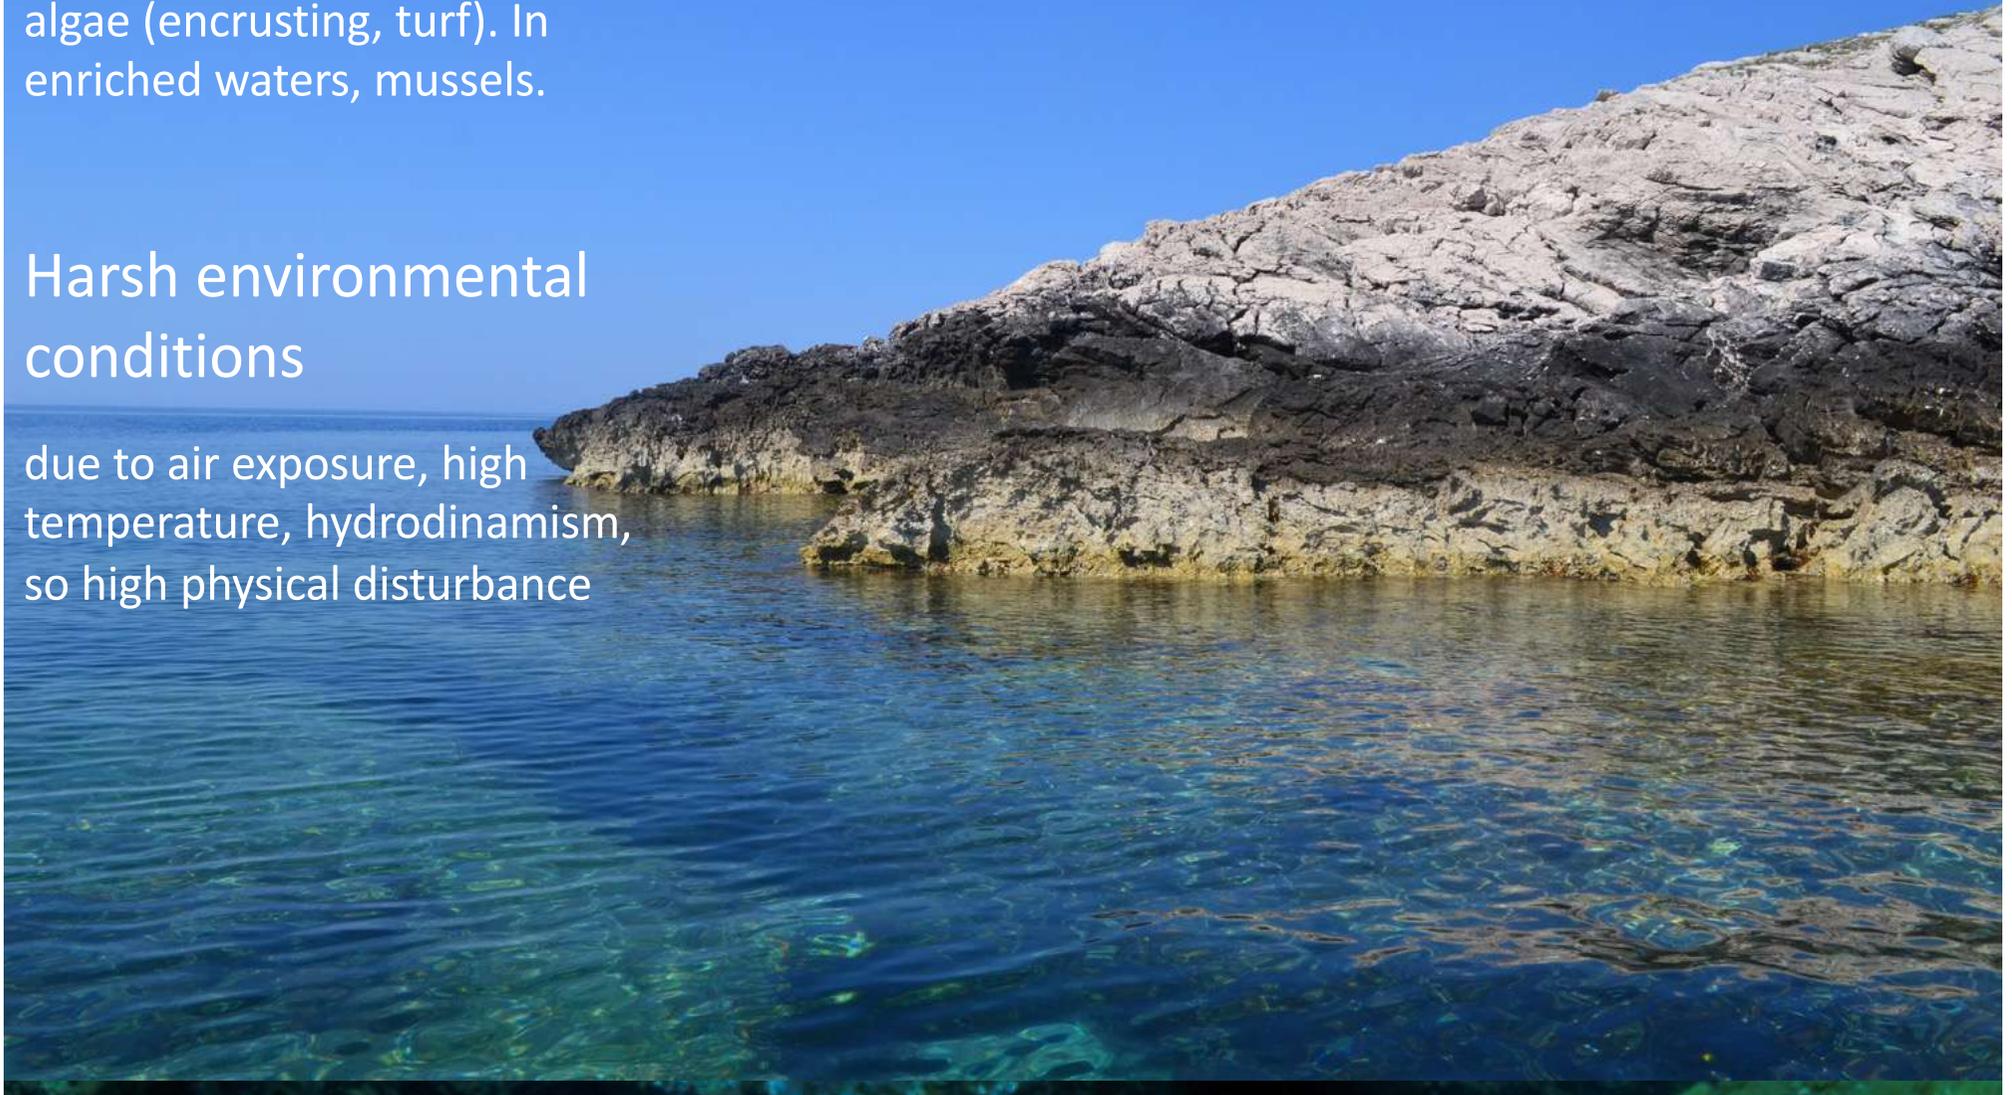

Intertidal rocky reefs

Reduced diversity

Barnacles, littorinids, limpets, cyanobacteria, anthozoans, algae (encrusting, turf). In enriched waters, mussels.

Harsh environmental conditions

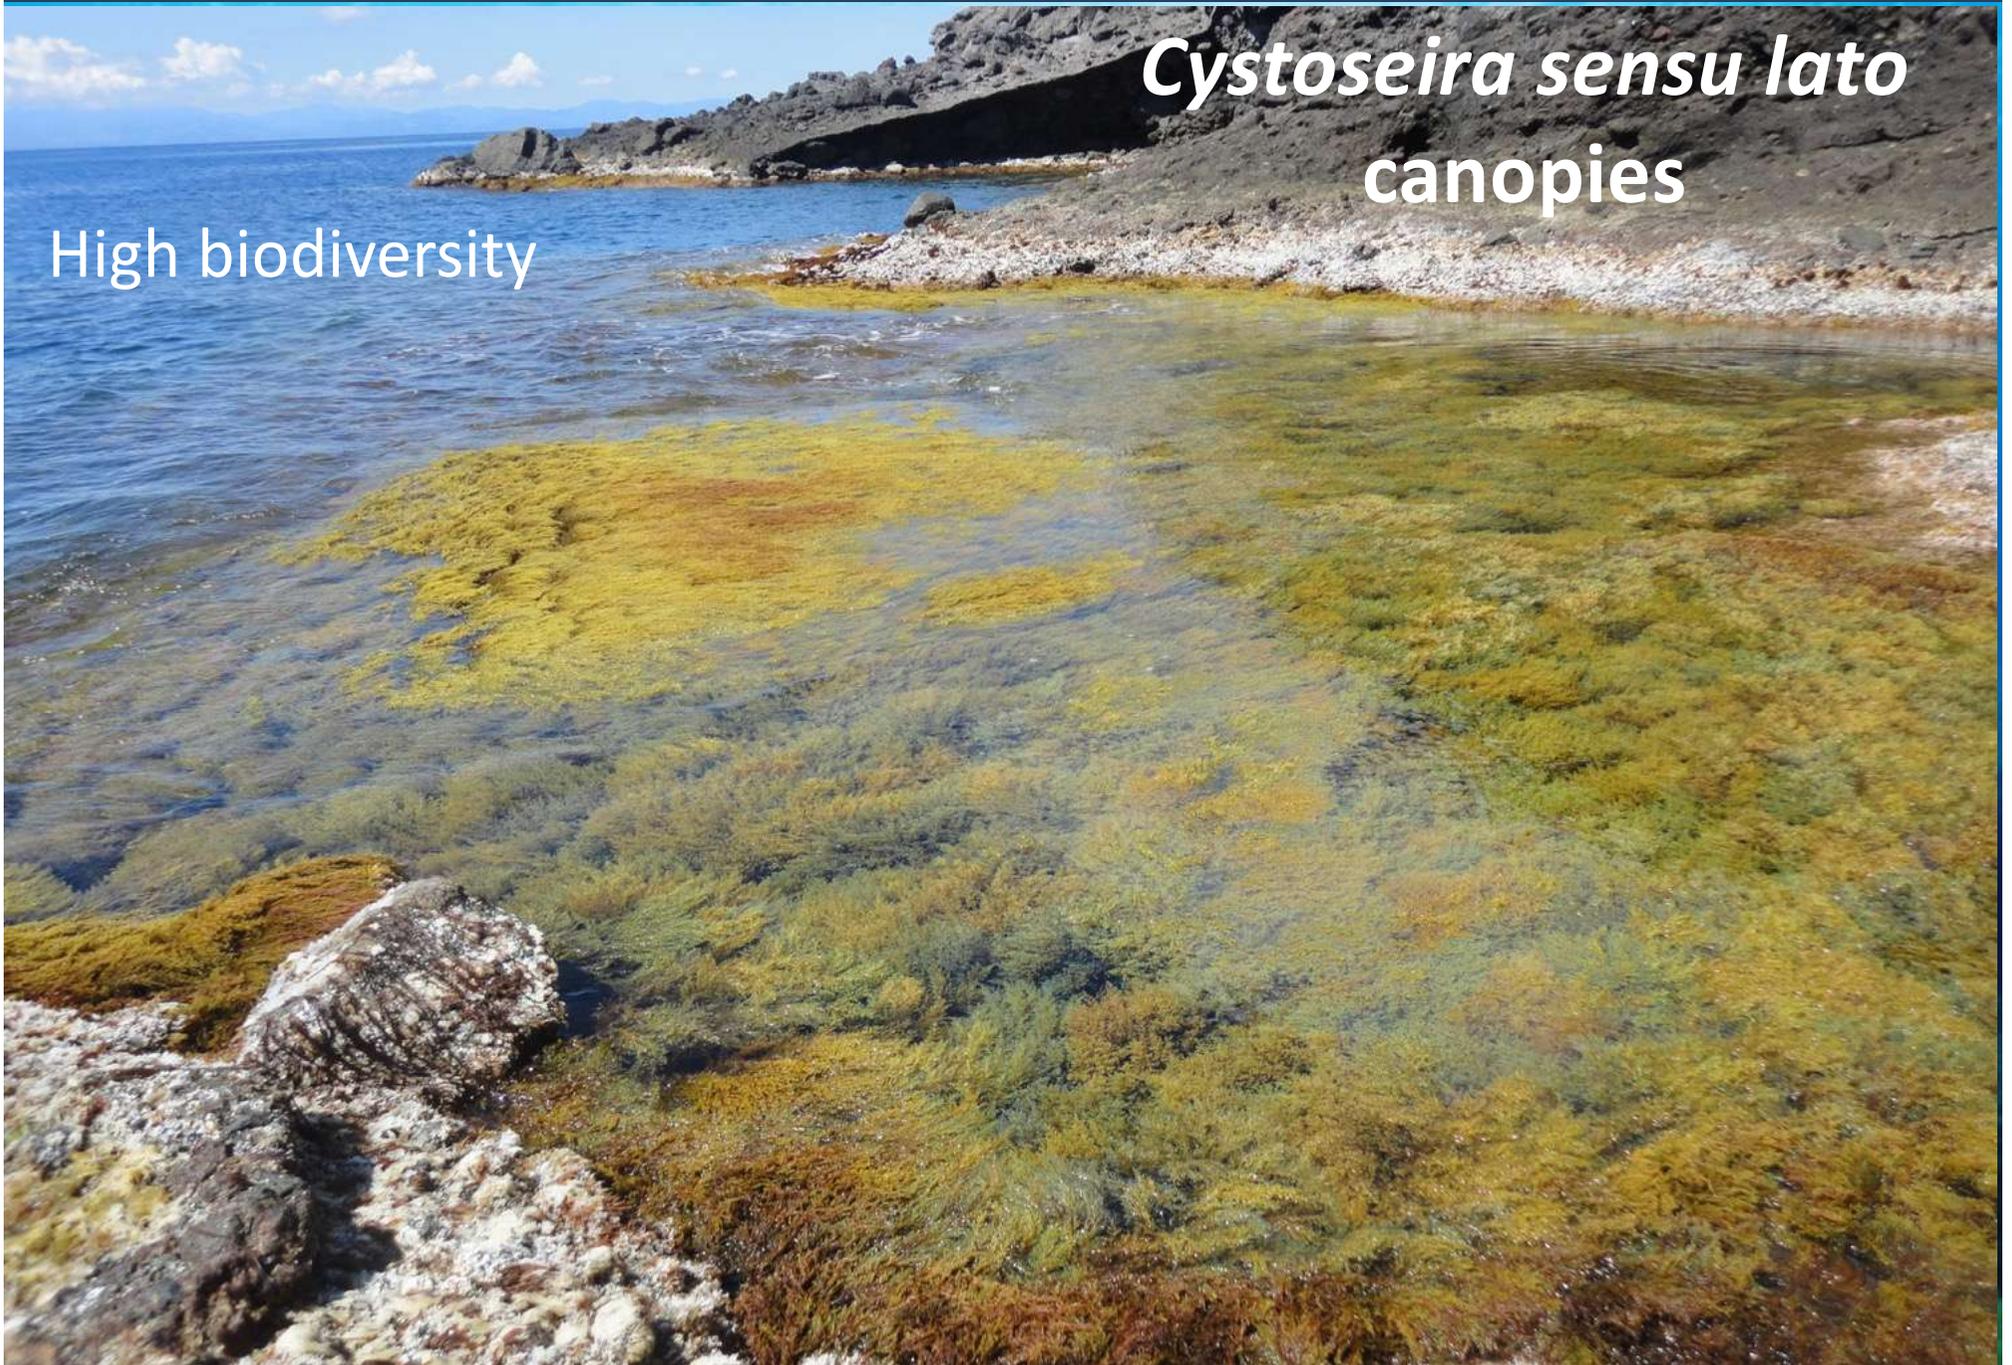

due to air exposure, high temperature, hydrodynamism, so high physical disturbance

Intertidal rocky reefs

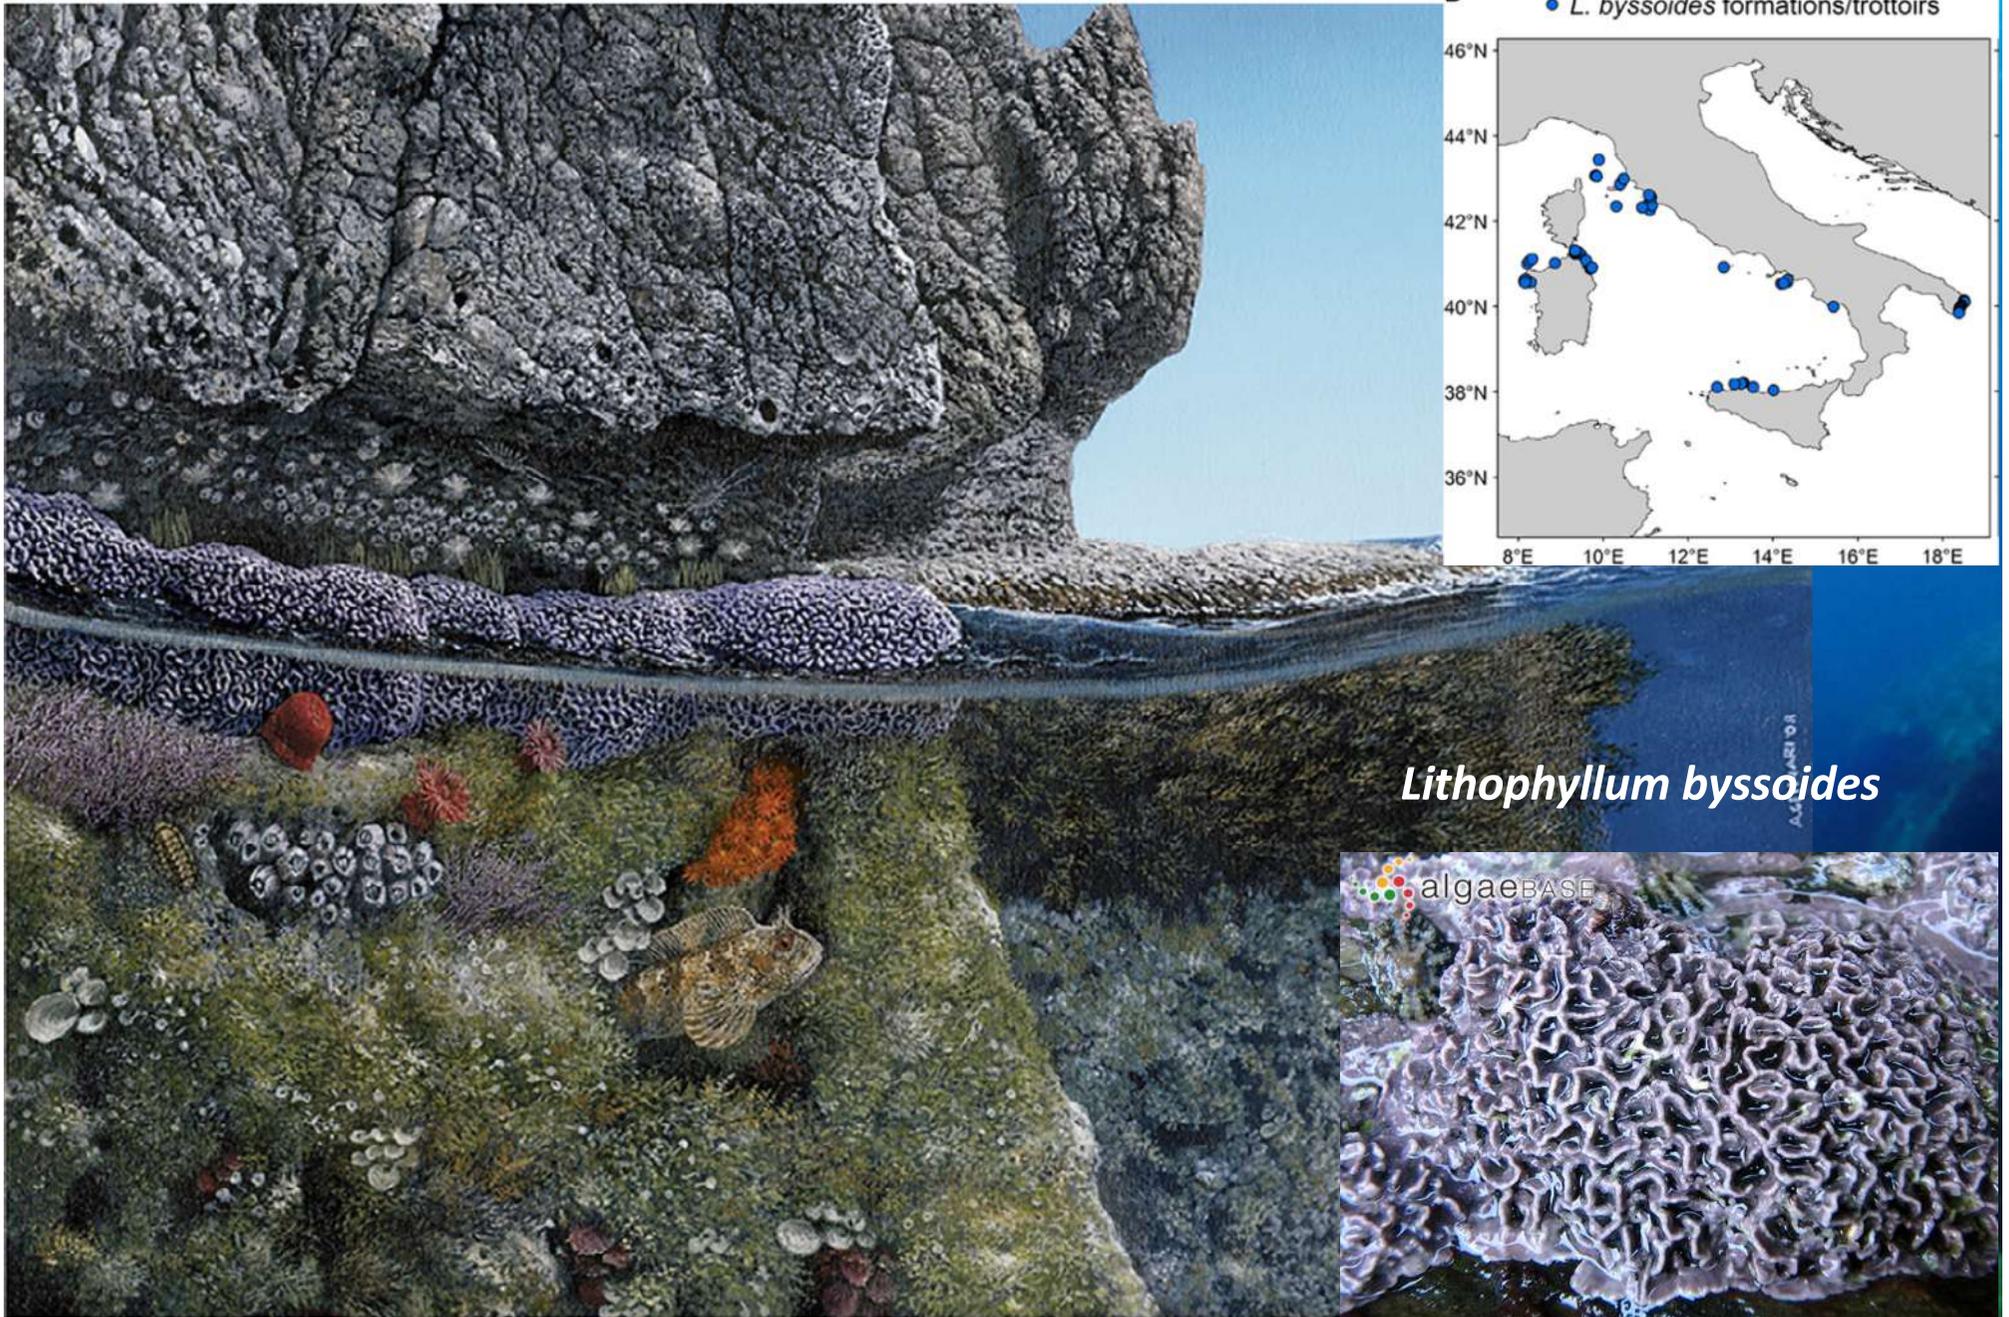

Cystoseira sensu lato
canopies

High biodiversity

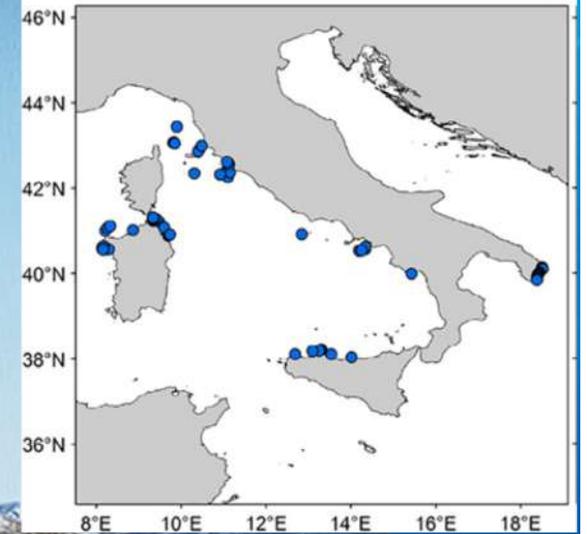

Lithophyllum rims

Fish assemblages

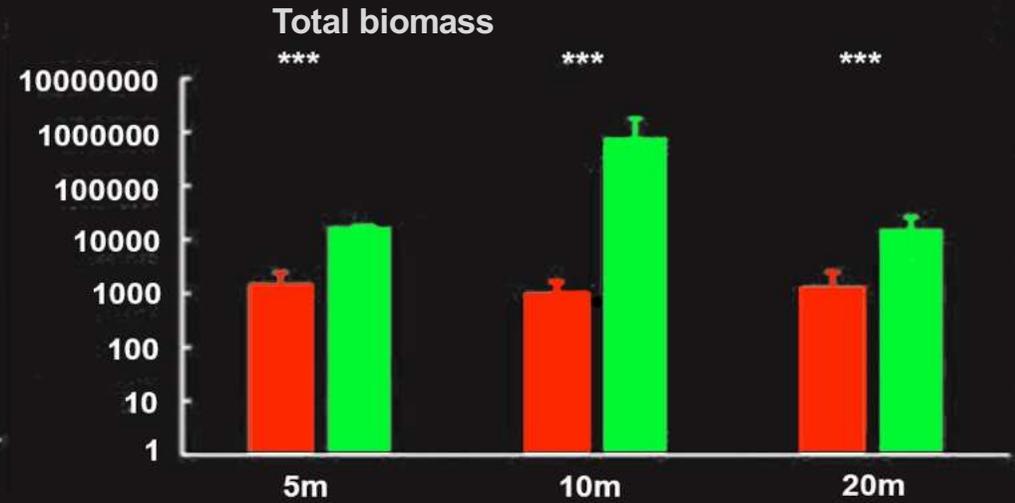

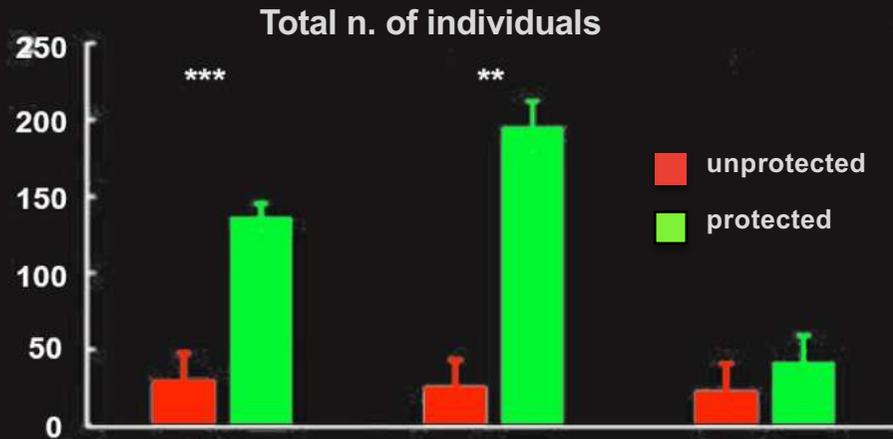

Main human threats

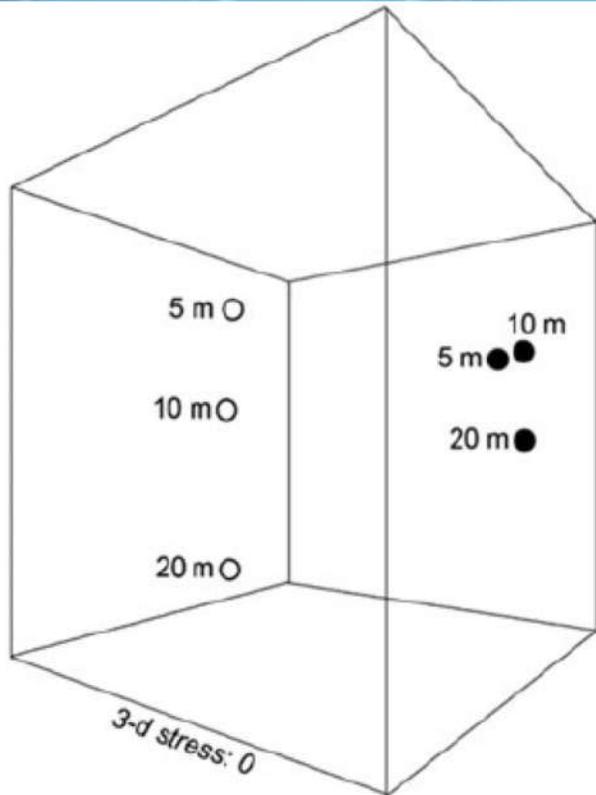

- Pollution
- Direct physical habitat disruption and artificialisation
- Overfishing
- Bioinvasions
- Climate change

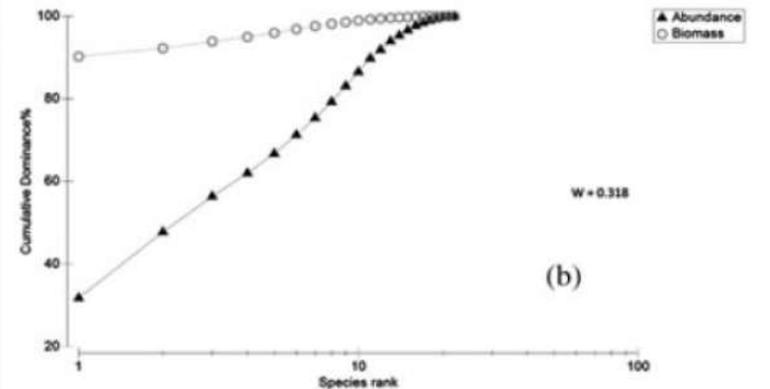

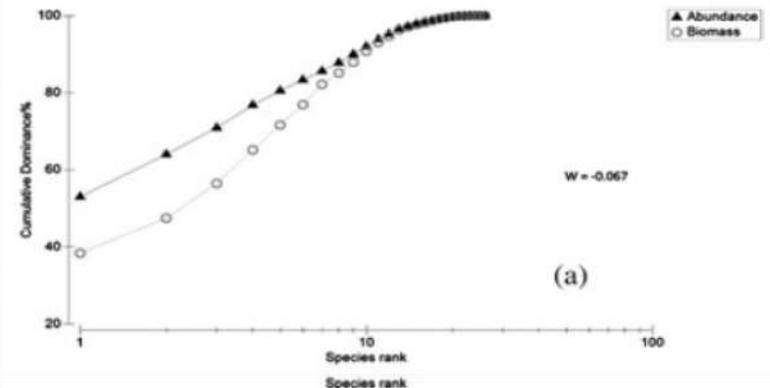

Effects of overfishing

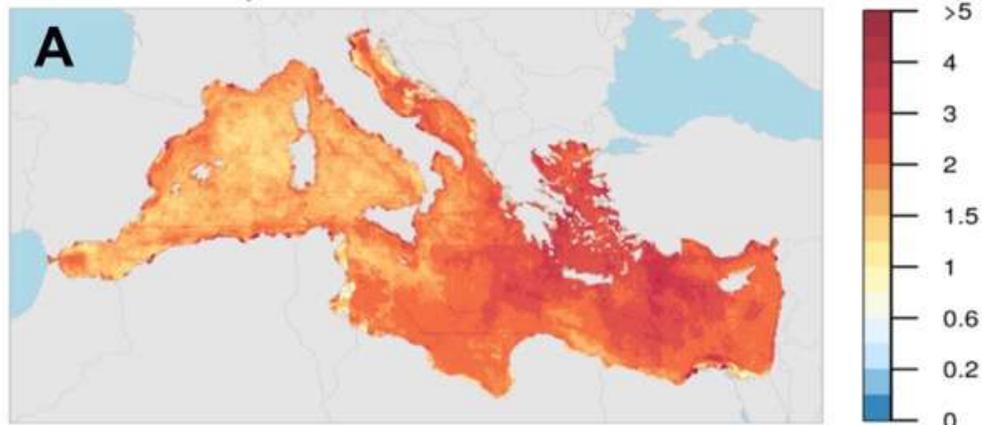

Appolloni et al., 2017.

Maintainance of depth structure in fish assemblages. Abundance-biomass patterns typical of healthy conditions

Trends in cumulative impact

Climate drivers are the main contributors to increased cumulative impact to rocky reefs, but pollution are also key drivers of increased Impact. Rocky reefs are impacted by the largest suite of different stressors

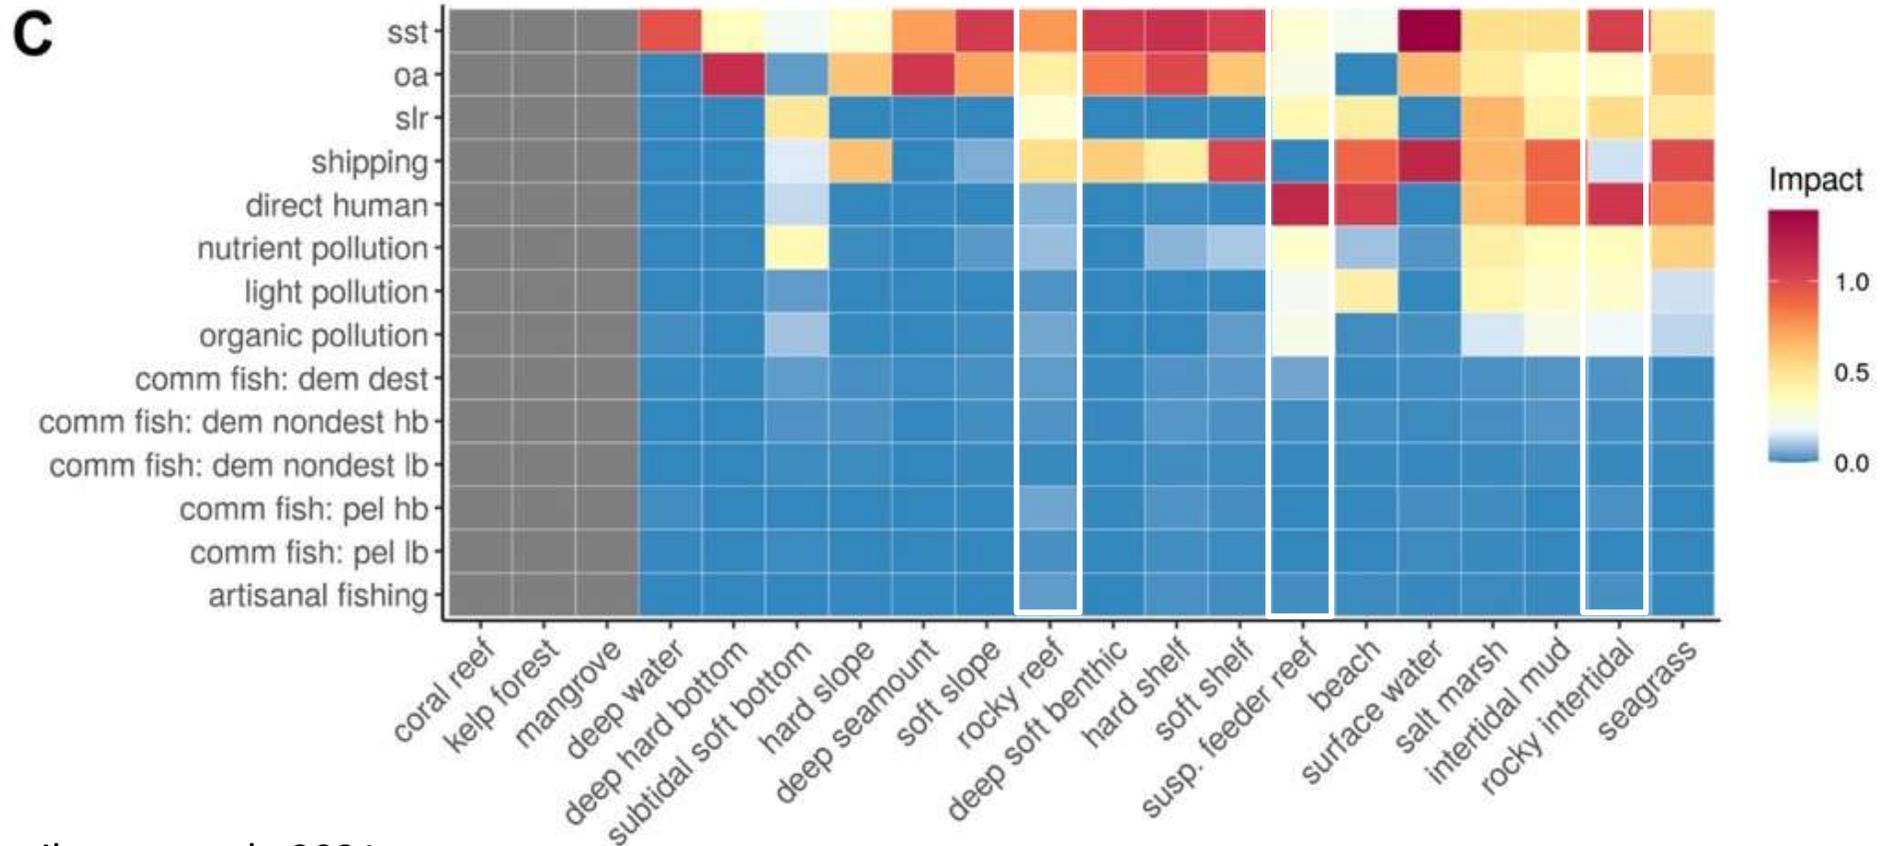

Table 1
Summarized description and sensitivity levels of the main community categories distinguished in the monitored coasts

| Category | Description | Sensitivity level |
|----------------------------------|---|-------------------|
| <i>Cystoseira mediterranea</i> 5 | Continuous belt of <i>C. mediterranea/stricta</i> | 20 |
| <i>Cystoseira crinita</i> | Populations of <i>C. crinita</i> | 20 |
| <i>Cystoseira balearica</i> | Populations of <i>C. balearica</i> | 20 |
| <i>Cystoseira sheltered</i> | Populations of <i>Cystoseira foeniculacealbarbatalspinosa</i> v. <i>tenuior/compressav.pustulata</i> | 20 |
| <i>Posidonia</i> reef | Barrier and fringing reefs of <i>Posidonia oceanica</i> | 20 |
| <i>Cymodocea nodosa</i> | <i>Cymodocea nodosa</i> meadows | 20 |
| <i>Zostera noltii</i> | <i>Zostera noltii</i> meadows | 20 |
| Trottoir | Build-ups of <i>Lithophyllum byssoides</i> | 20 |
| <i>Cystoseira mediterranea</i> 4 | Almost continuous belt of <i>C. mediterranea/stricta</i> | 19 |
| <i>Cystoseira mediterranea</i> 3 | Abundant patches of dense stands of <i>C. mediterranea/stricta</i> | 15 |
| <i>Cystoseira mediterranea</i> 2 | Abundant scattered plants of <i>C. mediterranea/stricta</i> | 12 |
| <i>Cystoseira compressa</i> | Populations of <i>C. compressa</i> v. <i>compressa</i> | 12 |
| <i>Cystoseira mediterranea</i> 1 | Rare scattered plants of <i>C. mediterranea/stricta</i> | 10 |
| <i>Corallina</i> | Belt of <i>Corallina elongata</i> without <i>Cystoseira</i> | 8 |
| <i>Haliptilon</i> | Belt of <i>Haliptilon virgatum</i> , without <i>Cystoseira</i> | 8 |
| <i>Mytilus</i> | Mussel (<i>Mytilus galloprovincialis</i>) beds, without <i>Cystoseira</i> | 6 |
| Encrusting corallines | Belt of <i>Lithophyllum incrustans</i> , <i>Neogoniolithon brassica-florida</i> and other encrusting corallines | 6 |
| Green algae | Upper sublittoral belts of <i>Ulva</i> and <i>Cladophora</i> | 3 |
| Blue greens | Communities dominated by Cyanobacteria and <i>Derbesia tenuissima</i> | 1 |

Index of ecological status of intertidal rocky fringe based on sensitivity levels (SL) of different macroalgae associations and their abundance. Value calculated as the ratio between the weighted mean of SL and the reference value for the area.

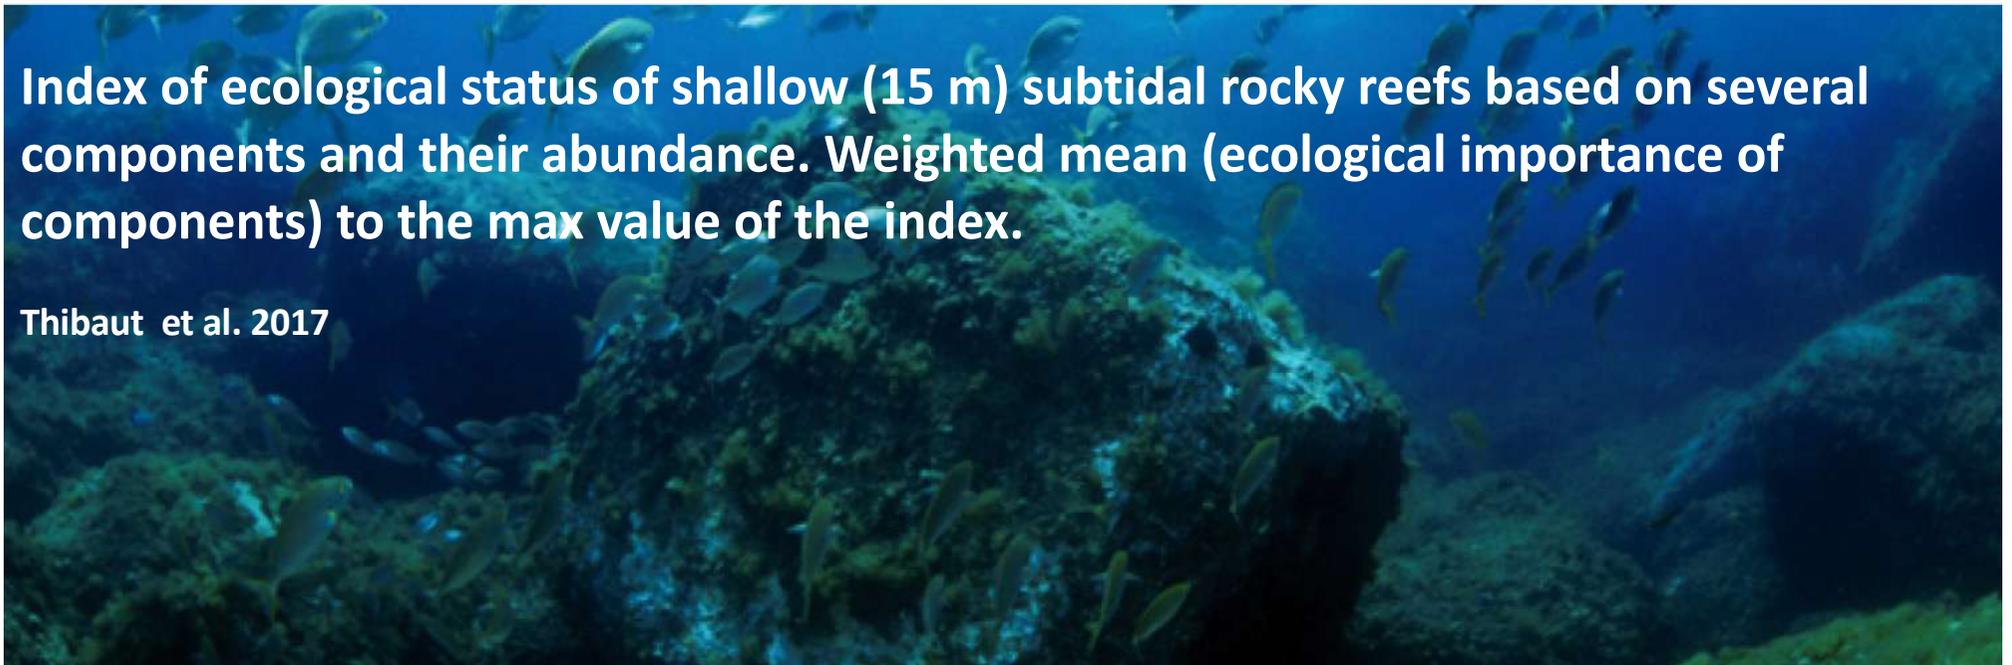

Ballesteros et al. 2007

Reef-EBQI

| Functional compartment | Weighting (W) | Parameter | 4 | 3 | 2 | 1 | 0 |
|--|---------------|--|-----------------------------------|------------------------------------|---------------------|----------------------|-----------------|
| 1- MPOs | 15 | Cover type | Arborescent perennial $\geq 50\%$ | Arborescent perennial 5 to $<50\%$ | Shrubby $\geq 50\%$ | Shrubby 5 to $<50\%$ | Turf Encrusting |
| 2- Detritus-feeders | 3 | Density (individuals 10 m^{-2}) | <0.5 | 0.5 to 1.0 | 1.1 to 2.0 | 2.1 to 5.0 | >5.0 |
| 3- Filter- and suspension-feeders | 2 | Density (individuals 10 m^{-2}) | <2.5 | 2.5 to 5.0 | 5.1 to 10.0 | 10.1 to 20.0 | >20.0 |
| 4- Sea urchins | 10 | Density (individuals m^{-2}) | 0.05 to 1.0 | <0.05 | 1.1 to 5.0 | 5.1 to 10.0 | >10.0 |
| 5- Invertivorous invertebrates | 3 | | | | | | |
| - <i>Octopus vulgaris</i> , <i>Marthasterias glacialis</i> | | Density (individuals 200 m^{-2}) | >1.0 | 0.6 to 1.0 | 0.3 to 0.5 | 0.1 to 0.2 | <0.1 |
| - <i>Hexaplex trunculus</i> | | Density (individuals 10 m^{-2}) | <0.5 | 0.6 to 1.0 | 1.1 to 2.0 | 2.1 to 4.0 | >4.0 |
| 6- Herbivorous teleosts | 4 | Biomass kg teleosts $\text{WM } 100\text{ m}^{-2}$ | 1.1 to 3.0 | 3.1 to 4.0 | >4.0 | 0.25 to 1.0 | <0.25 |
| 7-8- Omnivorous and Invertivorous teleosts | 4 | Biomass kg teleosts $\text{WM } 100\text{ m}^{-2}$ | >3.5 | 2.6 to 3.5 | 1.6 to 2.5 | 0.8 to 1.5 | <0.8 |
| 9- Piscivorous teleosts | 7 | Biomass kg teleosts $\text{WM } 100\text{ m}^{-2}$ | >5.0 | 1.0 to 5.0 | 0.5 to 0.9 | 0.4 to 0.1 | <0.1 |
| 10- Planktivorous teleosts | 1 | Biomass kg teleosts $\text{WM } 100\text{ m}^{-2}$ | >2.0 | 2.0 to 1.5 | 1.5 to 0.9 | 0.9 to 0.3 | <0.3 |
| 11- Sea birds | 1 | | | | | | |
| - <i>Phalacrocorax</i> spp. | | Distance to the nearest nesting site (km) | <4.0 | 4.0 to 7.9 | 8.0 to 12.9 | 13.0 to 17.0 | >17.0 |
| - <i>Pandion haliaetus</i> | | Distance to the nearest nesting site (km) | <4.0 | 4.0 to 7.9 | 8.0 to 12.9 | 13.0 to 17.0 | >17.0 |

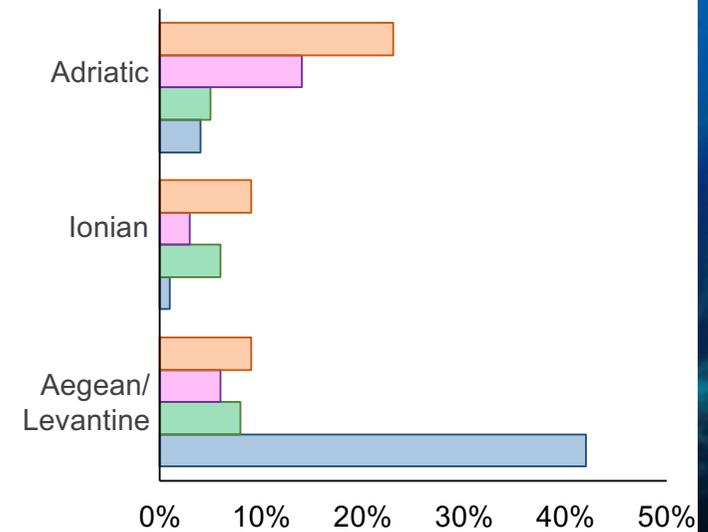

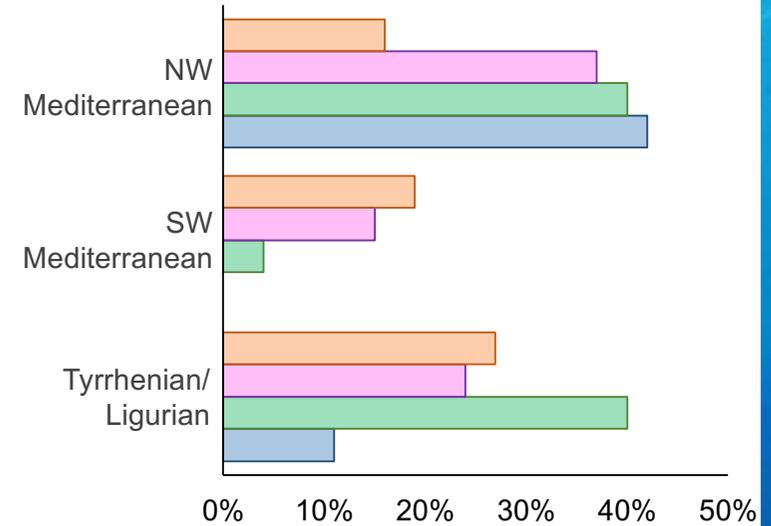

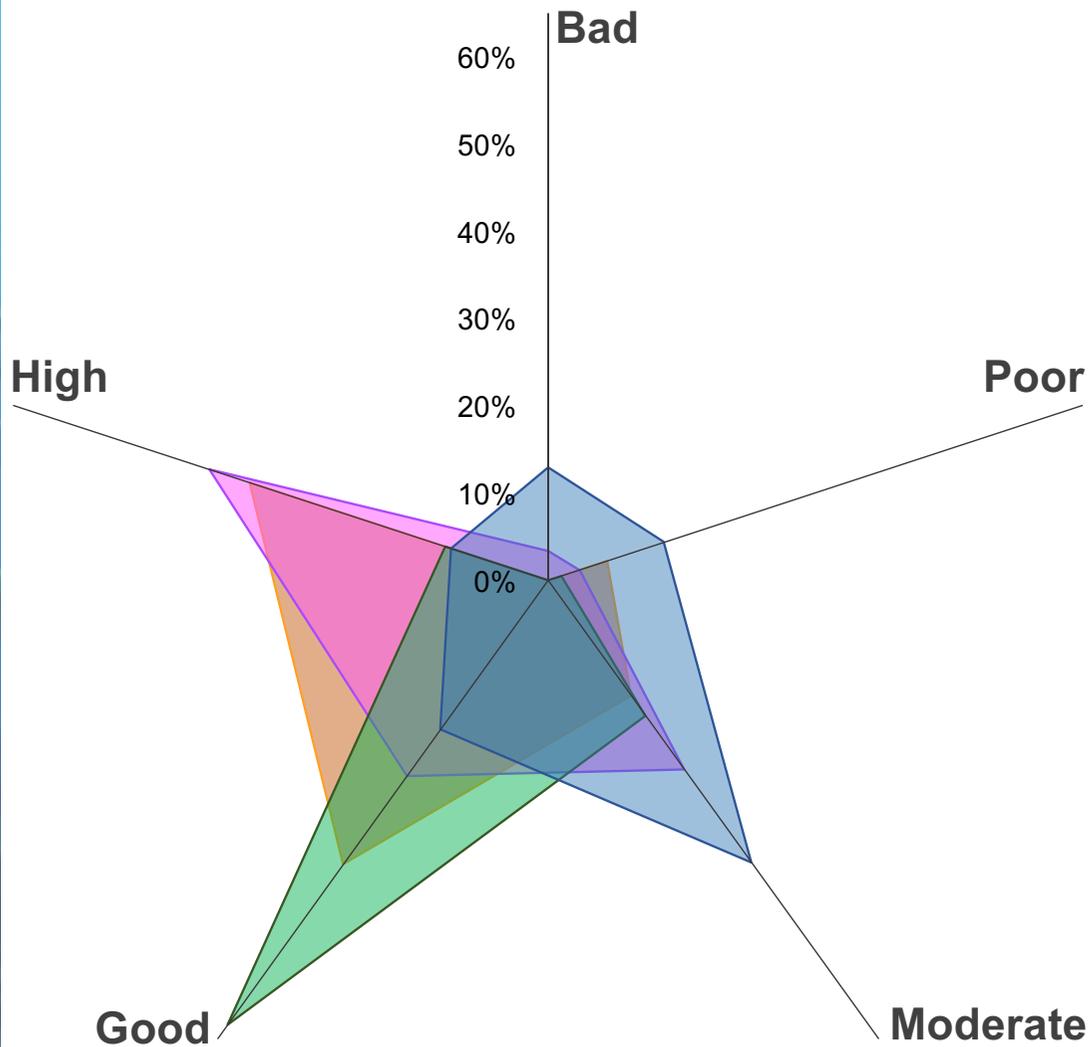

Index of ecological status of shallow (15 m) subtidal rocky reefs based on several components and their abundance. Weighted mean (ecological importance of components) to the max value of the index.

Thibaut et al. 2017

Ecological status

Bevilacqua et al., 2020

Coastal soft bottoms (CSB)

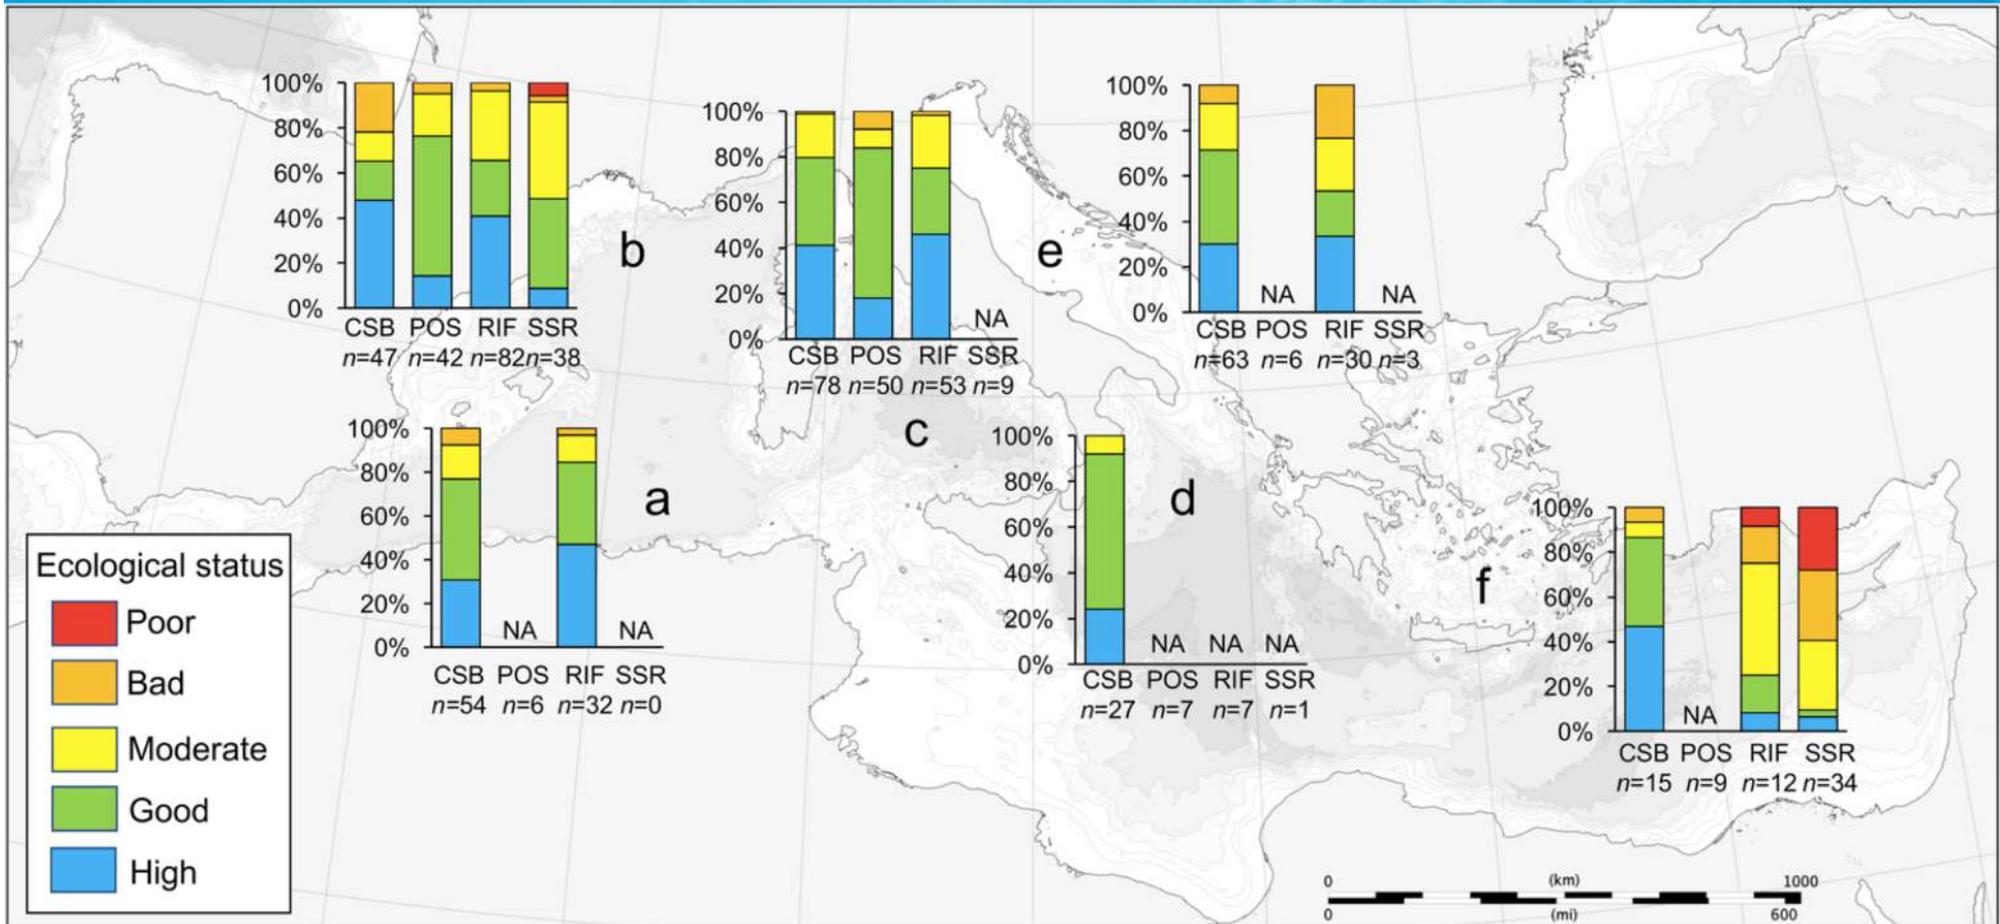

Rocky intertidal fringe (RIF)

P. oceanica beds (POS)

Shallow subtidal reefs (SSR)

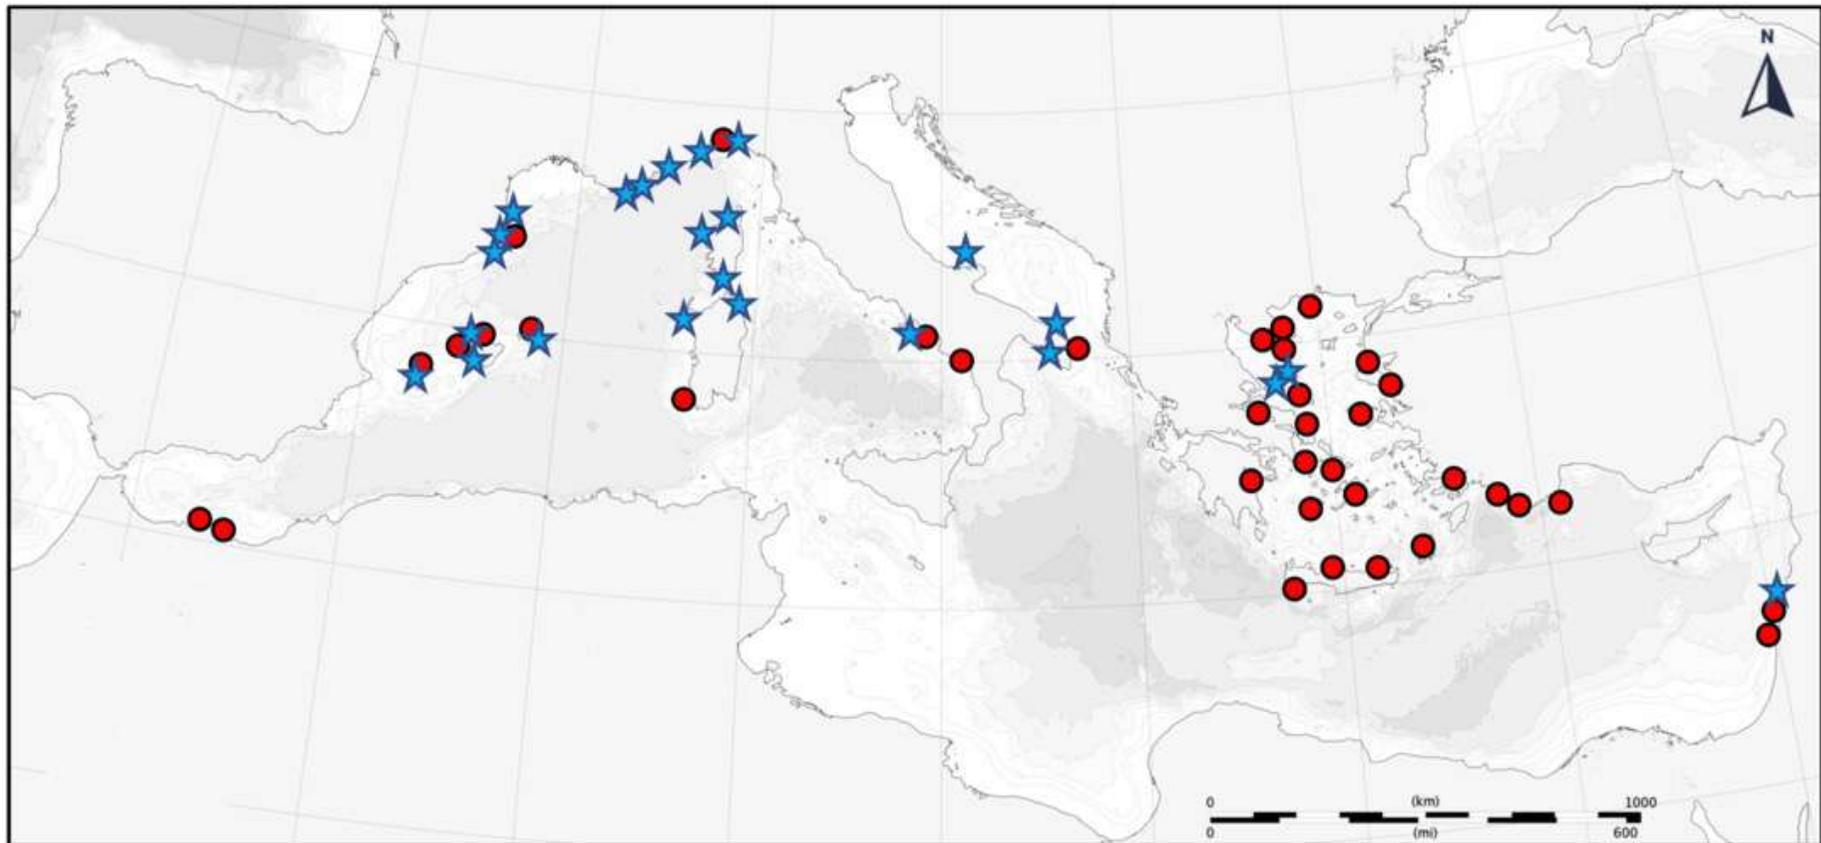

Ecological status

Lack of data in several areas. Apparently, rocky reefs in the Levantine basin are those in worse conditions

Ecological status

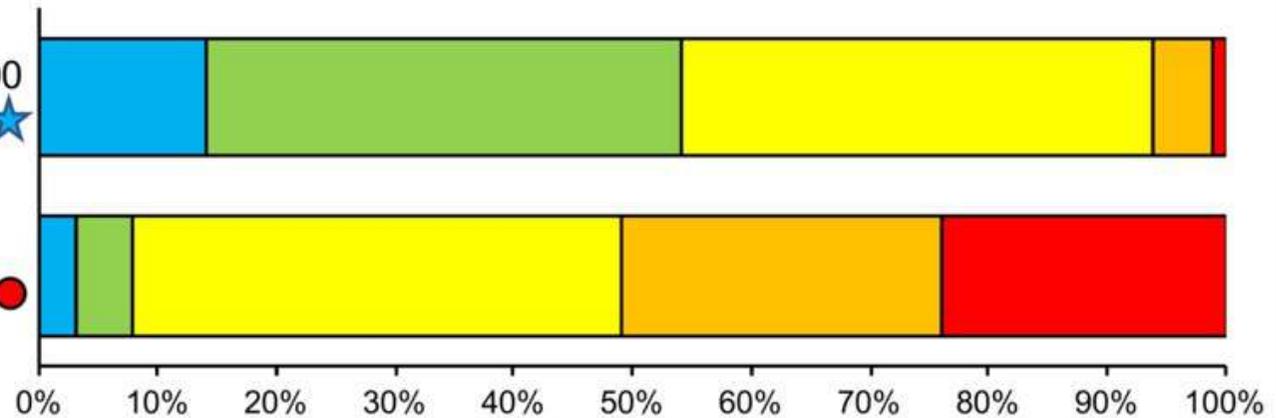

Ecological status

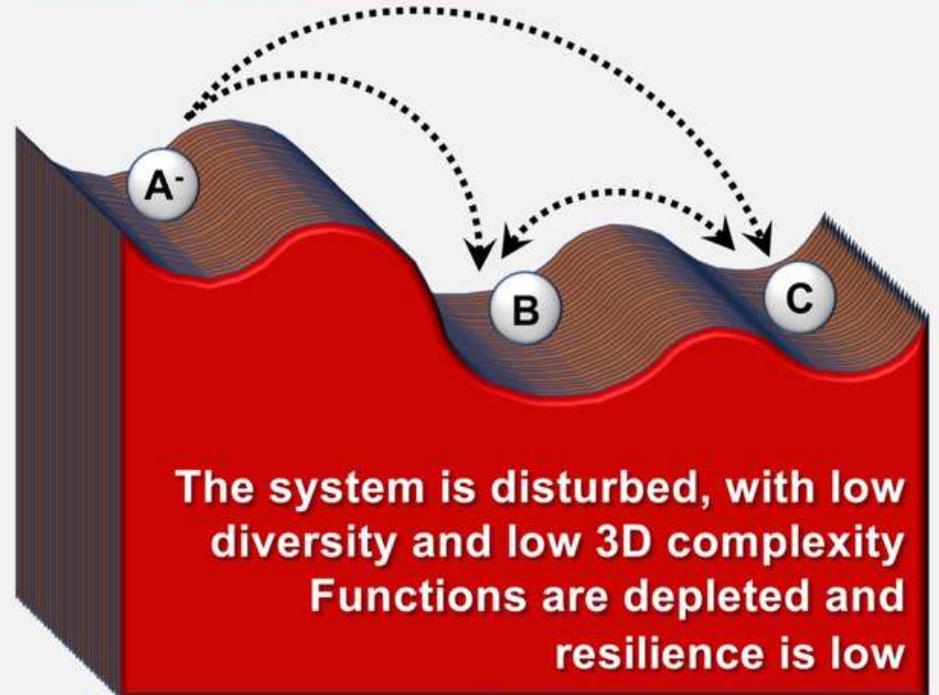

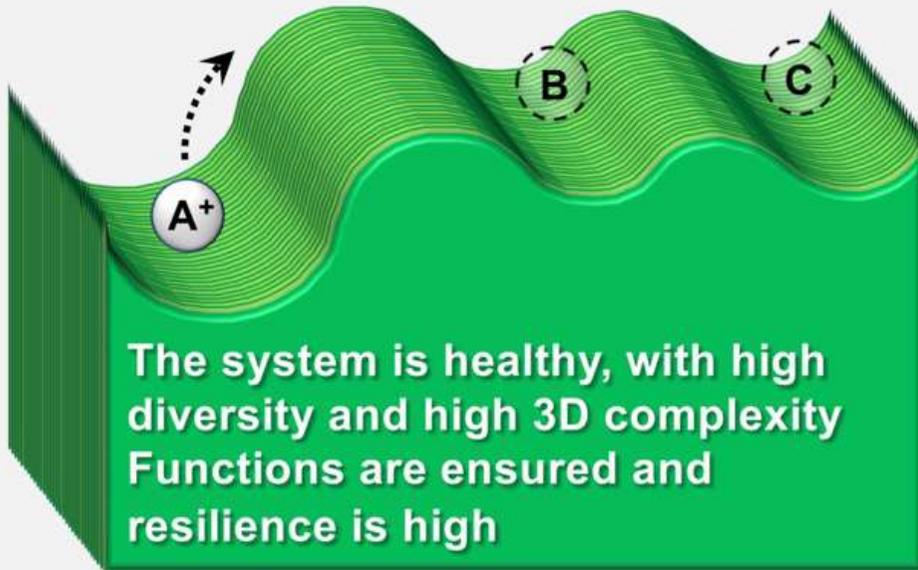

- Poor
- Bad
- Moderate
- Good
- High
